COURSE BOOK

MARITIME ENGLISH

3.17+

For Deck and Engine Cadets

An illustrated course book and workbook

Prepared by

DR. WAYNE VINCENT TOLOMIA

Head of Foreign Languages · Academic Affairs

FIRST EDITION · 2026

AMCOL Maritime English Programme

FIRST EDITION 2026 | MESSAGE FROM THE PRESIDENT

Foreword

The maritime profession is international by its very nature. A ship may be built in one country, owned in another, managed from another, and operated by seafarers of many different nationalities. In such an environment, English is more than an academic subject. It is a professional tool — and, at sea, clear communication is an essential part of safe and effective operations.

Throughout my years at sea and later in ship management and maritime education, I have seen that technical knowledge alone does not make a competent maritime professional. A seafarer must also be able to understand instructions, ask the right questions, communicate clearly, report facts accurately, and speak with confidence when circumstances become difficult.

This is why I am particularly pleased to introduce Maritime English 3.17 Plus, prepared by Dr. Wayne Vincent Tolomia, Head of Foreign Languages, Academic Affairs, Asian Maritime Technological College (AMCOL). This course book has been developed specifically for both deck and engine cadets, integrating language learning with the professional situations they are likely to encounter throughout their careers.

What I especially appreciate about this book is its practical approach. The ten units take learners progressively from joining a ship and becoming familiar with the shipboard environment to watchkeeping, position and weather reporting, VHF communication, distress and safety communication, mooring and anchoring, cargo operations, machinery and maintenance, and finally incident reporting and handover.

The book does not treat English as vocabulary and grammar in isolation. Students are repeatedly required to read, listen, speak, write, clarify, confirm, record and report. Its learning sequence moves from vocabulary and models to documents, reading, grammar, speaking, practical language tasks, worksheets and assessment. This reflects an important principle of maritime education: competence is demonstrated not by what we know, but by what we can apply correctly when it matters.

I also value the emphasis placed throughout this book on accuracy and professional judgement. Students are encouraged to distinguish facts from assumptions, preserve figures and units correctly, request clarification when information is uncertain, and avoid inventing missing information. These habits extend far beyond language learning. They are fundamental behaviours of competent officers and responsible maritime professionals.

At AMCOL, our responsibility is not simply to prepare students to pass examinations. Our greater responsibility is to prepare them for the reality of life and work at sea — and ultimately to develop professionals who can contribute confidently and responsibly to the global maritime industry.

I therefore sincerely commend Dr. Wayne Vincent Tolomia for the considerable effort, professional dedication and educational thought invested in preparing this first edition. Developing a course book of this scope requires not only knowledge of English teaching, but also a genuine commitment to understanding the communication needs of future seafarers. This work is a valuable contribution to the continuing development of Maritime English education at AMCOL.

To every cadet who uses this book, I offer one message:

> ***Do not study Maritime English simply to pass an examination. Learn it so that one day, when you stand on a bridge, work in an engine room, communicate with a multinational team, or face a difficult situation at sea, you can understand clearly, think professionally, and communicate with confidence.***

May this book become not only a classroom resource, but also the beginning of a lifelong habit of clear, accurate and professional maritime communication.

Dr. Chalermvut Thansuvan
President
Asian Maritime Technological College (AMCOL)
Former Master Mariner
Thailand
2026

FIRST EDITION 2026 | READING, PRACTICE AND ASSESSMENT

Preface

Maritime English 3.17 Plus is a course book and workbook for deck and engine cadets. It develops the English needed to understand shipboard information, ask useful questions, exchange clear messages and produce factual records. The ten units connect language study with situations from joining a ship to reporting an incident and handing over unfinished work.

Each of the ten units includes a dedicated reading article. Dialogues, shipboard documents and articles serve different purposes: listen to an exchange, locate information in a record, and follow ideas across paragraphs. Each article has ten comprehension and application questions. Visual resources provide the plans, cards and forms needed for the linked tasks.

Read, practise, produce and review

Begin with the vocabulary and study the model. Read a text once for its main purpose, then again for details and evidence. Practise the grammar before writing or speaking independently. Use the supplied data accurately, keep uncertain information labelled, and revise your work after feedback. A request for clarification is part of successful communication, not a failure.

For deck and engine learners

Both departments need accurate names, figures, locations, time references and status reports. Some tasks are department-specific, but mixed pairs can explain their information to each other. Do not claim an officer's qualification when practising a cadet introduction: state your actual training role and the documents relevant to it.

Using this book responsibly

The situations and numerical data are teaching examples. Follow actual shipboard procedures, authorised personnel and applicable requirements in practice. The book supports language learning; it does not authorise navigation, maintenance, firefighting, cargo handling or radio operation. Distress practice is conducted only in a closed classroom simulation.

The final assessment contains 150 short-response items and four writing/speaking tasks, totalling 240 marks. A separate teacher supplement provides reading keys, visual guidance, listening scripts, final assessment answers and rubrics. Teaching and examination times are starting points for local piloting, not validated limits.

Dr. Wayne Vincent Tolomia

STCW competency coverage | Preface continued

Continue on **pages iii-v** for the competency list, book-specific evidence, coverage limits and official source references. These pages identify the English elements supported by this publication; they do not claim STCW certification.

PREFACE CONTINUED | IMO MODEL COURSE 3.17

STCW Competency Coverage

IMO Model Course 3.17 organises teaching into **General Maritime English** and **Specialized Maritime English** [S1]. The lists below identify the STCW English and communication elements practised in this publication. Headings are shortened teaching labels; coverage statements are editorial mappings of the printed activities, not quotations from the Code.

This course book combines a common deck-and-engine language foundation with selected occupational applications. Dialogues, documents, articles, visual tasks and assessments provide different kinds of language evidence.

A-II/1 Maritime English and SMCP for deck officers

PRIMARY | SELECTED LANGUAGE ELEMENTS

Understand and exchange shipboard information; describe positions and weather; use relevant standard phrases; interpret notices and records; write clear operational messages.

Evidence in this book: Units 1-10, especially Units 3-8 and 10; B/B2/B3 reading strands; speaking and practical tasks. [S2]

A-III/1 English for engineering duties

PRIMARY | SELECTED LANGUAGE ELEMENTS

Describe machinery and its location, understand routine engineering information, report faults and read the supplied procedures and maintenance records in English.

Evidence in this book: Units 1-3, 6, 9 and 10; engine handover, work-order and machinery-status tasks. Coverage is limited to the technical texts supplied in the book. [S2]

A-IV/2 English in maritime radio message handling

LIMITED | LANGUAGE COMPONENT ONLY

Practise identification, clarification, confirmation and recording of radio information; construct and interpret the supplied distress, urgency and safety exchanges.

Evidence in this book: Units 5-6 and their message forms. Classroom transmissions do not establish GMDSS equipment competence or authority to operate a live radio. [S2]

A-VI/1-4 Effective communication on board

PRIMARY | COMMUNICATION ELEMENT

Ask about duties and locations, understand safety-related instructions, pass accurate information and request repetition when a message is unclear.

Evidence in this book: Units 1-3, 6-7, 9-10; partner tasks, feedback and handovers. The remaining Personal Safety and Social Responsibilities requirements are not claimed. [S3]

How to read this map. Primary identifies a direct language aim; **contextual** identifies communication within a wider operational competency; **limited** identifies only a particular transferable element. None means that the whole STCW competency is taught, assessed or certified by this book.

PREFACE CONTINUED | CONTEXTUAL COVERAGE

Operational Communication Links

These links concern the **English used within a wider competency**. The named activity is evidence of language practice, not evidence that the learner can independently perform the full operation. [S2]

A-II/1 Navigational watch and bridge-team communication

Communicate a present situation, relevant figures, standing instructions and unfinished work; record information so that another watch can understand it.

Evidence in this book: Units 3-5, 7 and 10: handover, weather and passage messages, VHF log and incident records. This is not a practical navigation qualification. [S2]

A-III/1 Engineering watch and internal communication

Exchange engine-room status, report readings and defects, and transfer outstanding actions. The internal-communication link concerns clear messages and records, not hardware operation.

Evidence in this book: Units 3, 6, 9 and 10: engine log, fault report, maintenance work order and handover. [S2]

A-II/4 English helm orders

Give and repeat standard wheel orders and preserve the stated figure. This supports the English component of the rating competency; actual steering performance must be trained and assessed separately.

Evidence in this book: Unit 3: standard-order practice and the order/repeat-back drill. [S2]

A-II/1 Communication during cargo handling

Identify cargo information and a reported discrepancy, communicate a stopped or pending operation, and prepare a factual written record.

Evidence in this book: Unit 8: cargo dialogue, document, reading article and visual tasks. A completed language exercise is not a stowage, segregation or cargo-safety approval. [S2]

Language evidence across the course

Evidence	What to look for
Receptive work	Answers show the meaning of the supplied dialogue, article, diagram or document.
Performance	Record speaking and practical-task observations, written drafts and revisions; do not rely only on grammar scores.
Final assessment	Use the final paper and its separate teacher key as course-level language evidence, not a substitute for STCW competency assessment.

PREFACE CONTINUED | EVIDENCE, LIMITS AND SOURCES

Coverage Locator and References

The numbers below are **printed page labels**, used throughout this publication. The front matter, including the STCW preface pages iii-v, uses Roman numerals; Unit 1 begins on page 1.

Section / topic	Language evidence	Page(s)
1 | Joining the Ship	Roles, reporting lines, joining and familiarisation language	1
2 | Around the Ship	Locations, directions and safety-equipment descriptions	21
3 | Watchkeeping and Routine Operations	Orders, present status, logs and handover	42
4 | Position, Weather and Passage	Positions, forecasts, plans and messages	62
5 | VHF Radio Procedure	Calling, clarification, spelling and communication records	82
6 | Distress, Urgency and Safety	Emergency-message language and recording	102
7 | Mooring, Anchoring and Port Operations	Orders, warnings, status and port-event records	122
8 | Cargo Operations and Dangerous Goods	Cargo information, discrepancies and documentary language	142
9 | Machinery, Faults and Maintenance	Technical descriptions, procedures and fault reports	163
10 | Incidents, Reports and Handover	Evidence, chronology, factual reporting and unfinished work	184

Scope and assessment boundary

The map concerns English, not independent authority to navigate, steer, maintain machinery, fight fire, handle dangerous goods or operate GMDSS equipment. Unit 9 offers transferable technical English; it is not a complete electro-technical officer programme under Table A-III/6. Final assessment begins on printed page 204.

Official sources and mapping method

[S1] IMO, Maritime English: Model Course 3.17 (2015 edition). Official source
Publisher description confirms the General and Specialized Maritime English sections. No claim is made to cover every objective in the full model-course syllabus.

[S2] IMO, STCW/CONF.2/34, Manila amendments to the STCW Code. Official source
Part A competency tables; the table references in this preface identify the selected provisions. This is the official 2010 baseline text, not a consolidated 2026 edition.

[S3] IMO, resolution MSC.560(108), revised Table A-VI/1-4. Official source
Effective 1 January 2026. Used here for the onboard-communication element; the map does not claim the full updated Personal Safety and Social Responsibilities syllabus.

Selected S2 locations: A-II/1, pp. 34-35, 40 and 42; A-II/4, p. 76; A-III/1, pp. 86-87; A-IV/2, p. 136. S3 communication row: annex p. 3.
Editorial map: checked against this book's printed content and the selected official provisions on 20 September 2026. This is not an approval, a complete amendment audit or a certification statement.

Contents and Resource Locator

Unit / topic	Grammar focus	Start	B3	Visuals
1. Joining the Ship	Present simple for roles and routines	1	6	14-15
2. Around the Ship	Prepositions; there is / there are	21	26	34-36
3. Watchkeeping and Routine Operations	Present simple and present continuous	42	47	55-56
4. Position, Weather and Passage	Future forms and planned arrangements	62	67	75-76
5. VHF Radio Procedure	Imperatives and requests	82	87	95-96
6. Distress, Urgency and Safety	Imperatives and passive reports	102	107	115-116
7. Mooring, Anchoring and Port Operations	Orders, warnings and status reports	122	127	135-136
8. Cargo Operations and Dangerous Goods	Countability and quantifiers	142	147	155-157
9. Machinery, Faults and Maintenance	Passive; present perfect and past simple	163	168	176-178
10. Incidents, Reports and Handover	Past tenses and reported speech	184	189	197-198

Assessment and references

Final summative assessment	204
Sources, image credits and editorial notes	234
Total pages (including cover)	244

B3 contains an original article and ten questions. Each visual set follows the unit practical task. The set includes the materials referenced by that task and can also be used before speaking practice. Unit quizzes remain inside their respective units.

Reading-page codes R1-R10 and visual codes V1-V10 are retained in the footer for easy cross-reference with the teacher supplement.

Preface | STCW competency coverage

The preface continues on pages **iii-v**. The front matter is numbered i-vii in Roman numerals. Unit 1, Joining the Ship, begins on page 1, and all unit and assessment pages follow in Arabic numerals.

A REPEATABLE LEARNING SEQUENCE

How to Use a Unit

Section	What you do
A Vocabulary	Say the terms, check meanings and use them in a short example.
B Dialogue / listening	Identify the speakers, the situation, important figures and the purpose of each message.
B2 Written document	Read a form, log, report or notice; connect information with the exchange.
B3 Reading for meaning	Read a separate article; answer ten questions using paragraph evidence and a short application.
C / C2 Grammar	Study form and meaning, complete controlled practice, then build and produce your own sentences.
D Speaking	Use role information, ask for clarification and confirm critical details.
E Practical language task	Use the supplied plans/cards to produce a usable message, record or handover.
V Visual resources	Read and complete the diagrams, forms and role cards linked to D/E.
F Worksheet	Review the unit independently and check your progress.
T Unit test	Demonstrate vocabulary, grammar, reading, writing and speaking.

Make your work easy to check

Keep figures beside their units. Identify the source of a statement. Distinguish a plan from a completed action. Use “not stated” or “not confirmed” rather than inventing a missing fact. In a report, retain an approximate time as approximate. After feedback, make the correction and use the improved version in the next task.

The original model-course and STCW linkage notes are indicative teaching references. They have not been independently audited as a complete mapping or accreditation claim. The teacher must verify the relevant standard and local training requirements.

CLASS NOTES

UNIT 1

Joining the Ship

Reporting on board, stating who you are, learning who does what, and asking the questions a new crew member must ask in the first hour.

MODEL COURSE 3.17 LINKAGE

Core Section 1, General Maritime English - crew roles, routines and personal data.
STCW Table A-II/1 and A-III/1: use English in written and oral form in general maritime communications.

O LEARNING OBJECTIVES

tagged with cognitive level

1	State your name, rank, certificate and joining details clearly to a senior officer.	REMEMBER	DECK + ENGINE
2	Identify the main deck and engine ranks and say what each is responsible for.	UNDERSTAND	DECK + ENGINE
3	Ask three questions a newly joined crew member must ask before starting work.	APPLY	DECK + ENGINE
4	Complete a crew particulars form accurately from spoken information.	APPLY	DECK + ENGINE

C CAN-DO CHECKLIST

tick when you can do it unaided

- [ ] I can introduce myself on board using my rank and certificate.
- [ ] I can name at least eight ranks and say what each one does.
- [ ] I can ask where my muster station is and what my duty is.
- [ ] I can fill in a crew particulars form from what I hear.

Reporting on board: the new officer meets the Chief Officer at the gangway.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

to report on board *v. phr.*
To present yourself formally when you arrive at the ship.
e.g. *Report on board to the Chief Officer before 1600.*

rank *n.*
A person's official position in the ship's organisation.
e.g. *My rank is Third Engineer.*

certificate of competency *n.*
The official document proving you are qualified for a rank.
e.g. *My certificate of competency is valid until March 2029.*

Master *n.*
The officer in command of the whole vessel.
e.g. *The Master signed the crew list this morning.*

Chief Officer *n.*
The head of the deck department and second in command.
e.g. *The Chief Officer is responsible for cargo and mooring.*

Officer of the Watch *n.*
The officer in charge of the bridge during a watch.
e.g. *The Officer of the Watch reports directly to the Master.*

Chief Engineer *n.*
The head of the engine department.
e.g. *The Chief Engineer signs the engine logbook daily.*

Second Engineer *n.*
The engineer who runs the day-to-day work of the engine room.
e.g. *The Second Engineer prepared the maintenance plan.*

duty engineer *n.*
The engineer on call when the engine room is unmanned.
e.g. *Call the duty engineer if the alarm sounds.*

bosun *n.*
The senior rating of the deck department.
e.g. *The bosun assigns the deck ratings each morning.*

rating *n.*
A crew member who is not an officer.
e.g. *Two ratings were assigned to the mooring station.*

watch *n.*
A fixed period of duty, usually four hours.
e.g. *I have the 0800 to 1200 watch.*

muster station *n.*
The place where you assemble in an emergency.
e.g. *Question: where is my muster station?*

familiarisation *n.*
The required introduction to the ship before you start work.
e.g. Required familiarisation comes before assigned duties.

handover *n.*
The passing of duties and information to the person relieving you.
e.g. *The handover took twenty minutes and was signed by both officers.*

crew list *n.*
The official document naming everyone on board.
e.g. *The agent collected the crew list before departure.*

sign on *v. phr.*
To join a vessel officially and be entered in her records.
e.g. *I signed on in Singapore on 4 March.*

relieve *v.*
To take over duty from another person.
e.g. *I will relieve you at 1200.*

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Which three terms would you use in your very first sentence on board?

2. Name two ranks from the engine department.

3. Write one sentence introducing yourself using your own rank:

UNIT 1 | B READING AND LISTENING

First Hour on Board

The situation
MV Andaman Trader is alongside in Laem Chabang. A new Third Officer and Fourth Engineer report to the ship's office. All times in this exchange are local time.

CHIEF OFFICER Good afternoon. Welcome on board. Please give your names and ranks.

THIRD OFFICER Somchai Prasert, joining as Third Officer. My certificate of competency and passport are here.

FOURTH ENGINEER Nuttapong Wong, joining as Fourth Engineer.

CHIEF OFFICER Thank you. You sign on today, 4 March. Mr Prasert, you work to me. Mr Wong, you report to the Second Engineer.

THIRD OFFICER Which watch will I keep?

CHIEF OFFICER The 0800-1200 and 2000-2400 watches. You relieve the Second Officer at 0800 tomorrow.

FOURTH ENGINEER Is the engine room manned at night?

CHIEF OFFICER It is periodically unattended at night, with a duty engineer on call. The Second Engineer will explain the arrangements and confirm your assignment after familiarisation.

THIRD OFFICER Where is my muster station?

CHIEF OFFICER Lifeboat station number two, port side, boat deck. Your personal lifejacket and immersion suit are in your cabin. Check the muster list with your trainer.

FOURTH ENGINEER When is safety familiarisation?

CHIEF OFFICER Today, before you start duties. The bosun leads the deck tour at 1600; the Second Engineer takes you through the machinery spaces. Ask about anything unclear and record what has been completed.

THIRD OFFICER Is there a handover from the officer I am relieving?

CHIEF OFFICER Yes. The outgoing Third Officer remains aboard until 1800. Meet in the office at 1700, discuss his notes and both sign the handover record.

Original classroom dialogue adapted from the supplied manuscript. Operational data are fictional; this is not a complete operating procedure.

Familiarisation principle: S3. The times and reporting arrangements describe this fictional ship only.

CLASS NOTES

UNIT 1 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. What are the two new officers' ranks, and on what date did they sign on?

2. Who does the Third Officer report to, and who does the Fourth Engineer report to?

3. Which watch will the Third Officer keep, and who will he relieve?

4. Why does the Chief Officer say the question about the muster station is the right one to ask first?

5. What must the officers complete before assigned duties, and why does the timing matter?

Language in context

1. "You work to me" — find this phrase. Who reports to whom? Write the same idea in a more formal way.

2. "manned" / "unmanned" — find both words. What is the difference for the duty engineer?

3. "relieve" — find this verb. Who relieves whom, and at what time?

4. Find “before you start duties”. What does it tell you about the order of training and work?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “Joining a New Ship: More Than Paperwork”. Compare the information you hear with the information a reader can verify.

CLASS NOTES

B2 READING A WRITTEN DOCUMENT - CREW PARTICULARS FORM

the same situation, on paper

The same joining conversation ends as a written record. Read the completed form and notice how spoken information becomes fixed fields on paper.

CREW PARTICULARS - MV ANDAMAN TRADER

FORM CP-03 · PAGE 1 OF 1

PERSONAL DETAILS	
Family name	PRASERT
Given name	Somchai
Rank on joining	Third Officer
Certificate of competency	TH-OOW-114872, valid to 14 March 2029
Date signed on	4 March, Laem Chabang
SHIPBOARD ASSIGNMENT	
Department	Deck
Reports to	Chief Officer
Watch	0800-1200 and 2000-2400
Muster station	Lifeboat No. 2, port side, boat deck
Emergency duty	Assist with launching, headcount at station
FAMILIARISATION	
Safety familiarisation	Completed 4 March, 1620. Conducted by bosun.

Handover received Yes, completed after the 1700 meeting; signed by both officers

ACTIVITY - WORKING WITH THE DOCUMENT

1. Find three pieces of information on this form that were spoken in the dialogue. Write them out.
2. Name one field with information not supplied in the conversation. Who should verify it?
3. Why does the form record who conducted the familiarisation, and not only that it was done?
4. Complete a blank version of this form for yourself, inventing a vessel and a rank.

NOTES

UNIT 1 | B3 READING FOR MEANING

Joining a New Ship: More Than Paperwork

Before you read
Look at the crew chart in Visual Resource 1. Which officer would a deck cadet normally ask for help?

Reading focus: Find responsibilities and put joining activities in order.

A A new ship has familiar job titles but unfamiliar spaces, equipment and people. Joining is therefore more than handing over a passport. A new crew member needs to know who gives instructions, where to go in an emergency and how to ask for help. The first conversation starts this process; it does not finish it.

B On MV Blue Horizon, deck cadet Mali reports to the Chief Officer. Engine cadet Arun reports to the Second Engineer for daily training. At 1400 both cadets check their joining details in the ship's office. They present the training documents required for their roles. Neither cadet claims to hold an officer's certificate of competency.

C Before they are assigned shipboard duties, they receive the required safety information and familiarisation. At 1430 an authorised crew member shows them their muster station and escape routes. Mali then explains the route back without help. Arun cannot identify the alternative exit, so he asks to see it again instead of signing that part as understood.

D At 1530 the trainer checks their understanding and records what they have completed. Any unfinished training is identified before duties are assigned. A signature records the training, but it cannot replace understanding. Both cadets keep a short list of questions for their next meeting with their supervisors.

Word support

assigned: given a particular duty | **demonstrate**: show how to do something | **record**: a written account

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S3; see Sources and editorial notes.

CLASS NOTES

UNIT 1 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. What is the main purpose of this article?

2. Who supervises Mali's department, and who guides Arun's daily training?

3. At what time do the cadets check their joining details?

4. What does Arun ask to see again?

5. In paragraph C, what does assigned mean?

6. In paragraph C, who does them refer to?

7. Put these events in order: understanding checked; joining details checked; routes shown.

8. Why is it not enough for Arun to sign the form without asking a question?

9. Write one question a new cadet could ask about an emergency location.

10. Write two sentences for Mali's joining record: her role and the officer she reports to.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 1 | C GRAMMAR - FORMS AND MEANING

Present simple for roles and routines

Use the present simple for a role, a regular duty or a fixed schedule. Use be for identity and state; use other verbs for actions. Choose the form from the subject.

Meaning	Form	Example
Role / state	am / is / are	The Chief Engineer is responsible for machinery.
Routine action	subject + verb; he/she/it + -s	The bosun checks the deck every morning.
Negative action	do not / does not + base verb	The cadet does not sign as an officer.
Negative with be	am / is / are + not	The engineer is not on watch now.
Question with action	Do / Does + subject + base verb?	Does the officer keep the 0800 watch?
Question with be	Am / Is / Are + subject ...?	Is the Chief Officer on board?

Build the sentence

The Third Officer + keeps + the 0800-1200 watch. Change only the verb when the subject changes: The officers keep the watch. After does, return to the base form: Does she keep ...?

Spelling and pronunciation

Most verbs add -s: runs, signs. Add -es after endings such as -sh, -ch, -ss, -x and -o: watches, passes, goes. Consonant + y changes to -ies: carries. Have becomes has. Practise the endings in checks, runs and watches.

Put frequency words in a clear place

Usually, always and normally generally come before an action verb but after be: The engineer usually checks the alarms. The engineer is usually available. A schedule in this book describes its fictional vessel, not every ship.

Examples are for language learning. Sources: S1; see editorial notes.

CLASS NOTES

UNIT 1 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: Does he reports to the Chief Officer? Correct: Does he report to the Chief Officer?

Study the examples

1. She reports to the Second Engineer.

2. The Master commands the vessel.

3. The duty engineer checks the alarms every watch.

4. The crew members are at the muster station.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. The Chief Officer _____ (be) responsible for the deck department.

2. The cadet _____ (not be) an officer.

3. _____ the Third Officer _____ (keep) the 0800 watch?

4. Every morning the bosun _____ (assign) the work.

5. Who _____ the Fourth Engineer _____ (report) to?

6. Required familiarisation _____ (take) place before assigned duties.

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 1 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Make a question: The Master signs the record. -> Does the Master sign the record?

Activity B - rewrite as instructed

1. Rewrite as a question: The Fourth Engineer reports to the Second Engineer.

2. Rewrite as a negative: The engine room is manned during the night.

3. Rewrite with he: I keep the eight to twelve watch.

4. Rewrite as a wh-question asking about the person: The bosun assigns the deck ratings.

5. Rewrite in the plural: The rating musters at lifeboat number two.

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. He report to the Second Engineer every morning.

2. Does the Chief Officer signs the crew list?

3. The Master command the whole vessel.

4. Safety familiarisation are completed before assigned duties.

5. Who do the bosun assign to the mooring station?

CLASS NOTES

UNIT 1 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
Master / command / vessel -> The Master commands the vessel.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. Chief Engineer / head of / engine department

2. duty engineer / check / alarms / twice a day

3. the watch / change / at 0800 and 1200

4. every crew member / have / a muster station

5. the bosun / not work / on the bridge

Activity E - your turn

Write six sentences describing the crew of a vessel you know. Give each person a rank, say what they are responsible for, and
say who they report to. Use the present simple throughout and check every -s ending before you hand it in.

D SPEAKING PRACTICE

pairs, then change roles

You have just come up the gangway of a vessel you have never seen before. Your partner is the officer who meets you. Introduce yourself, then ask four questions before assigned duties begin.

STUDENT A - JOINING OFFICER

You are joining as Third Officer or Fourth Engineer, your choice. You have your certificate and passport. You must find out: who you report to, which watch you keep, where your muster station is, and when familiarisation takes place.

STUDENT B - CHIEF OFFICER

You meet the new officer at the ship's office. Ask for name, rank and certificate. Tell them the reporting line and the watch. Answer their questions, but make them ask - do not volunteer the muster station.

PHRASE BANK - USE AT LEAST FOUR OF THESE

- Good morning. I am joining as ...
- Who do I report to, sir?
- Where is my muster station?
- Understood, sir.
- My certificate of competency is here.
- Which watch will I keep?
- When is safety familiarisation?
- May I ask a question about ...?

D HOW TO RUN THE TASK

follow the steps in order

1. Read your role card only. Do not read your partner's card.
2. Student A begins. Introduce yourself in one sentence: name, rank, and that you are joining.
3. Student B asks for the certificate and states the reporting line and watch.
4. Student A must ask all four required questions before the conversation ends.
5. Change roles: Student A becomes Student B and Student B becomes Student A. This time, whoever plays the joining role should choose the department (deck or engine) they did not use the first time, so both partners practise both departments' vocabulary.
6. Perform once for another pair. They tick the four questions as they hear them.

ACTIVITY - AFTER YOU HAVE SPOKEN

1. Which of the four required questions did your partner forget to ask?

2. Write the one sentence you would use to introduce yourself tomorrow.

3. Which rank was hardest to pronounce? Write it and mark the stressed syllable.

NOTES

Use the supplied Visual Resource 1 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

E PRACTICAL ACTIVITY - BUILD THE WATCH BILL

classroom or bridge simulator, 40 minutes

A watch bill shows who is on duty, when, and where. In this activity your group builds one for a small ship and then defends it in English. The language aim is to state roles and routines accurately; the professional aim is to see how deck and engine duties interlock across a 24-hour day.

YOU WILL NEED

- One blank 24-hour watch bill per group
- Rank cards: Master, C/O, 2/O, 3/O, C/E, 2/E, 3/E, 4/E, bosun, four ratings
- A copy of the muster list template
- A marker pen per group

E PROCEDURE

work through in order

1. In groups of four, lay out the rank cards and agree who belongs to deck and who to engine.
2. Fill the bridge watches first: three officers cover 24 hours in four-hour watches.
3. Add the engine department. Decide whether the engine room is manned or unmanned at night, and mark the duty engineer.
4. Assign every person a muster station and an emergency duty.
5. Write one sentence in the present simple for each officer, stating their routine. Use he/she plus -s.
6. Present your watch bill to another group. They must ask you three questions in English about it.
7. Answer their questions without looking at your notes.

E OBSERVATION CHECKLIST

for the teacher or a peer observer

The observer ticks one box per row while the group presents. Every row describes something that can be seen or heard, so two observers should agree.

Observable behaviour	Yes	Partly	Not yet
States each person's rank and department correctly.	☐	☐	☐
Uses the present simple with correct -s on he, she and it.	☐	☐	☐
Explains the reporting line using "reports to" rather than vague wording.	☐	☐	☐
States watch times using the 24-hour clock.	☐	☐	☐
Names a muster station for every person on the bill.	☐	☐	☐
Asks and answers questions without switching to Thai.	☐	☐	☐

ACTIVITY - WRITE IT UP

1. Write three sentences from your watch bill in the present simple, one for a deck officer, one for an engineer, one for a rating.

2. Which person on your bill has the heaviest workload, and why do you think so?

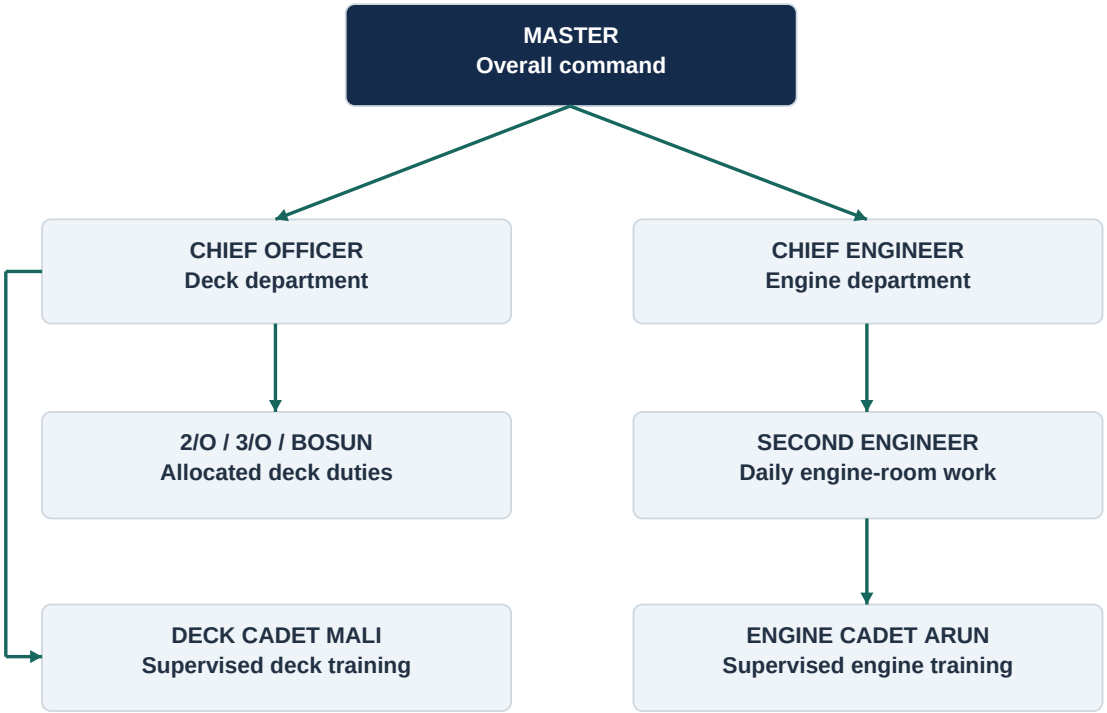

3. Name one problem your group found when assigning muster stations.

Use the supplied Visual Resource 1 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

UNIT 1 | VISUAL AND PRACTICAL RESOURCE

Who reports to whom?

Read the example organisation chart. Trace the deck and engine routes from the Master to the cadets. Then complete the two reporting sentences.

Example training organisation only. Direct reporting and supervision are assigned by the vessel; not every rank or relationship is shown.

V1.1. Mali is a deck cadet. Write the officer she reports to for deck training.

V1.2. Arun receives daily engine training from which officer?

MODEL LANGUAGE
Mali: I am a deck cadet. I report to the Chief Officer.
Arun: I am an engine cadet. I report to the Second Engineer for daily training.

CLASS NOTES

UNIT 1 | VISUAL AND PRACTICAL RESOURCE

Joining record and watch-board materials

TASK MATERIALS
Use paper role cards only. Copy the roles below onto slips. Use the blank board to practise stating duties and times; it is not a legally compliant watch/rest schedule. Real staffing, rest and competence checks remain with the vessel.

Role cards: Master; Chief Officer; Second Officer; Third Officer; Chief Engineer; Second Engineer; Third Engineer; Fourth Engineer; bosun; rating A; rating B; rating C; rating D.

Watch period	Bridge officer	Engine arrangement / duty person
0000-0400		
0400-0800		
0800-1200		
1200-1600		
1600-2000		
2000-2400		

Joining and familiarisation record

Cadet / department	
Reporting officer	
Documents presented for this role	
Muster station / emergency duty	
Normal and alternative routes shown	
Understanding demonstrated / still to clarify	
Trainer / completion date and time	

Complete only the information supplied or agreed in the classroom case. Do not claim an officer certificate that a cadet does not hold. Source: S3.

CLASS NOTES

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET

complete without looking back

Part 1 - Match the term to its meaning.

1.	Master	a.	Head of the engine department
2.	Chief Officer	b.	The place you go in an emergency
3.	Chief Engineer	c.	Senior deck rating
4.	bosun	d.	In command of the whole vessel
5.	rating	e.	Passing duties to the person relieving you
6.	duty engineer	f.	Head of the deck department
7.	handover	g.	On call when the engine room is unmanned
8.	muster station	h.	A crew member who is not an officer

Part 2 - Complete each sentence with one word.

1. The Chief Engineer _____ responsible for all machinery on board.
2. The engine room is _____ at night, so a duty engineer is on call.
3. I will _____ the Second Officer at 0800 tomorrow morning.
4. Required safety _____ must be completed before assigned duties.
5. My _____ of competency is valid until March 2029.
6. Every person on board has a _____ station shown on the muster list.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. Who does a Fourth Engineer normally report to, and what does that officer do?

2. Name two questions a newly joined crew member should ask in the first hour, and say why each matters.

3. Explain the difference between a manned and an unmanned engine room at night.

Part 4 - Write your own joining introduction.

Imagine you are joining a vessel tomorrow. Write four to six sentences: your name, your rank, the documents relevant to your training role, who you expect to report to, and two questions you will ask. Use the present simple throughout.

SELF-CHECK

- ☐ I can introduce myself on board using my rank and certificate.
- ☐ I can name at least eight ranks and say what each one does.
- ☐ I can ask where my muster station is and what my duty is.
- ☐ I can fill in a crew particulars form from what I hear.

NOTES

UNIT 1 SUMMATIVE TEST

Joining the Ship

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. The officer in command of the whole vessel. _____
2. The senior rating of the deck department. _____
3. A crew member who is not an officer. _____
4. A fixed period of duty, usually four hours. _____
5. The place where you assemble in an emergency. _____
6. The passing of duties to the person relieving you. _____
7. To take over duty from another person. _____
8. The official document naming everyone on board. _____
9. The required introduction to the ship before work begins. _____
10. The engineer on call when the engine room is unmanned. _____
11. The head of the deck department and second in command. _____
12. The head of the engine department. _____
13. The official document proving you are qualified for a rank. _____
14. To join a vessel officially and be entered in her records. _____

Word bank: bosun · certificate of competency · Chief Engineer · Chief Officer · crew list · duty engineer · familiarisation · handover · Master · muster station · rating · to relieve · to sign on · watch

B. GRAMMAR

one mark each **14 marks**

1. The Chief Engineer _____ (be) responsible for all machinery on board.
2. The engine room _____ (not be) manned between 1800 and 0600.
3. _____ the Third Officer _____ (keep) the eight to twelve watch?
4. Every morning the bosun _____ (assign) the ratings to their tasks.
5. Who _____ the Fourth Engineer _____ (report) to on this vessel?
6. Safety familiarisation _____ (take) about two hours on a ship of this size.
7. The duty engineer _____ (check) the alarms twice a day, without exception.
8. Correct the error: He report to the Second Engineer every morning.

_____

9. Correct the error: Does the Chief Officer signs the crew list?

_____

10. Correct the error: The Master command the whole vessel.

_____

11. Make a question: The Master commands the whole vessel.

_____

12. Make it negative: Safety familiarisation takes four hours.

_____

13. Build a sentence: the watch / change / at 0800 and 1200 / every day

_____

14. Build a sentence: every crew member / have / a muster station

_____

C. READING

answer in full sentences **14 marks**

A new Second Engineer joined MV Coral Star in Singapore on 12 June. She reports to the Chief Engineer and keeps the twelve to four watch, morning and evening. Her muster station is lifeboat number one, starboard side. The engine room is unmanned between 1800 and 0600, and she is duty engineer for her first week. Her safety familiarisation was conducted by the Third Engineer at 1500 on the day she joined, and the handover from the engineer she relieved was completed and signed at 1600. Her certificate of competency is valid for a further three years, and the Master entered her details in the crew list before the vessel sailed that evening.

1. What is the officer's rank, and on what date and in which port did she sign on?

2. Who does she report to, and which watch does she keep?

3. What are her duties during her first week, and why does that matter at night?

4. State two things that were completed on the day she joined, with the time of each.

5. Why is it useful that the handover was signed rather than only spoken?

6. Who conducted her safety familiarisation, and at what time?

7. What document did the Master update before the vessel sailed, and what does it record?

D. WRITING — 12 marks

You are joining a vessel tomorrow as a cadet. Write six to eight sentences introducing yourself to the Chief Officer: your name, your training role, relevant joining documents, who you expect to report to, and the questions you will ask about your watch and your muster station. Use the present simple throughout.

E. SPEAKING — *assessed by the teacher* — 8 marks

Introduce yourself on board and ask the four questions a newly joined crew member must ask. Your teacher will play the receiving officer.

Criterion	2	1	0
States name, training role and relevant documents clearly	☐	☐	☐
Asks about the reporting line and the watch	☐	☐	☐
Asks about the muster station and familiarisation	☐	☐	☐
Uses the present simple accurately, including -s endings	☐	☐	☐

UNIT 2

Around the Ship

Naming the spaces of a vessel from forecastle to engine room, saying where things are, and locating the safety equipment you may need in the dark.

MODEL COURSE 3.17 LINKAGE

Core Section 1, General Maritime English - ship's geography, locations and safety equipment.
STCW Table A-II/1 and A-III/1: describe locations and the purpose of equipment in English.

O LEARNING OBJECTIVES

tagged with cognitive level

1	Name the main spaces and decks of a vessel and say what each is used for.	REMEMBER	DECK + ENGINE
2	Describe the position of an item using prepositions of place and ship's directions.	UNDERSTAND	DECK + ENGINE
3	Direct a person from one named space to another without using their own language.	APPLY	DECK + ENGINE
4	Locate five items of safety equipment and state the purpose of each.	APPLY	DECK + ENGINE

C CAN-DO CHECKLIST

tick when you can do it unaided

- [ ] I can name at least twelve spaces on board in English.
- [ ] I can say where something is using forward, aft, port and starboard.
- [ ] I can give directions from one space to another.
- [ ] I can say what each item of safety equipment is for.

A tour on deck: crew members identify spaces on board.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

forecastle *n.*
The forward part of the upper deck, where anchoring gear is worked.
e.g. *The anchor party is on the forecastle.*

accommodation *n.*
The block containing cabins, messrooms and offices.
e.g. *The accommodation is aft on this vessel.*

bridge *n.*
The space from which the vessel is navigated.
e.g. *Call the bridge before entering the space.*

engine control room *n.*
The manned compartment from which machinery is operated and monitored.
e.g. *The alarm panel is in the engine control room.*

engine room *n.*
The compartment containing the main and auxiliary machinery.
e.g. *Access to the engine room is by the stairway aft.*

cargo hold *n.*
An enclosed compartment in which cargo is carried.
e.g. *Hold number three is empty and ventilated.*

bilge *n.*
The lowest internal part of the hull, where water collects.
e.g. *Sound the bilges and report the figures.*

tank top *n.*
The plating forming the floor of a cargo hold above the double bottom.
e.g. *Loose rust was removed from the tank top.*

alleyway *n.*
A passage or corridor inside the accommodation.
e.g. *The emergency lighting in the alleyway is not working.*

muster station *n.*
The place where crew assemble in an emergency.
e.g. *Your muster station is on the boat deck, port side.*

forward / aft *adv.*
Toward the bow / toward the stern.
e.g. *The workshop is aft of the engine control room.*

port / starboard *adv.*
The left / right side of the vessel, facing forward.
e.g. *The pilot ladder is rigged on the port side.*

above / below *adv.*
On a higher / lower deck than the speaker.
e.g. *The paint store is one deck below.*

watertight door *n.*
A door that seals a compartment against the passage of water.
e.g. *Close the watertight doors before departure.*

fire station *n.*
A position where hoses, extinguishers and fire gear are kept.
e.g. *There is a fire station at each end of the alleyway.*

escape route *n.*
The marked way out of a space in an emergency.
e.g. *Never obstruct an escape route with stores.*

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Name two spaces connected with engine-department work.

2. Which two terms would you use to describe where you are standing now?

3. Write one sentence locating the muster station on a ship you know:

B READING AND LISTENING

read aloud in role, then answer

THE SITUATION

The bosun is taking the new Third Officer around the deck while the Second Engineer takes the new Fourth Engineer below. Both tours meet in the alleyway.

Familiarisation Tour

Recording script - approx. 3 minutes

BOSUN

We start forward. This is the forecastle. The windlass and both anchors are here, and the forward mooring station is just behind you.

THIRD OFFICER

And the cargo holds? How many does she have?

BOSUN

Four. Hold number one is directly aft of the forecastle. Walk aft along the starboard side and you pass all four hatch covers.

THIRD OFFICER

Where is the fire station on this deck?

BOSUN

There are two. One at the forward end of the alleyway, one aft. Hoses, extinguishers and two sets of fire gear at each.

SECOND ENGINEER

Down here we are two decks below the main deck. This is the engine control room. Everything is monitored from this panel.

FOURTH ENGINEER

Is the main engine forward or aft of us?

SECOND ENGINEER

Forward. Go through that watertight door and down one more level and you are on the engine room floor plates. The workshop is aft, behind you, and the purifier room is above it.

FOURTH ENGINEER

Where do I sound the bilges?

SECOND ENGINEER

The sounding pipes are on the starboard side at floor plate level. You record the figures in the engine logbook every watch.

FOURTH ENGINEER

And the escape route from down here, sir?

SECOND ENGINEER

Good. There are two. The main stairway the way we came, and an emergency escape trunk on the port side that comes out on the boat deck. Walk it during familiarisation and learn the marked route. Do not rely on memory alone.

BOSUN

Same rule on deck. Your muster station is boat deck, port side, at lifeboat number two. Walk the approved route from your cabin and identify the signs and landmarks.

Both new officers complete the tour and sign the familiarisation checklist in the ship's office before 1800.

NOTES

UNIT 2 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. What equipment is on the forecastle, and how many cargo holds does the vessel have?

2. Where are the two fire stations, and what is kept at each one?

3. Is the main engine forward or aft of the engine control room? Where is the workshop?

4. Name the two escape routes. Where does the emergency escape trunk lead?

5. Why does the Second Engineer tell the Fourth Engineer to walk the escape route in daylight? B

Language in context

1. "directly aft of" — find this phrase. Which two spaces does it connect?

2. "two decks below" — find this phrase. Below what? Rewrite it using "above".

3. "floor plates" — find this term. Which department uses it, and what does it mean?

4. Why does identifying signs and landmarks help a new joiner learn the approved route?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “Finding Your Way - and Your Way Out”. Compare the information you hear with the information a reader can verify.

CLASS NOTES

B2 READING A WRITTEN DOCUMENT - SAFETY FAMILIARISATION CHECKLIST

the same situation, on paper

Every space you were shown on the tour appears on this checklist. Read it and see how a walk around the ship becomes an auditable record.

SAFETY FAMILIARISATION CHECKLIST - NEW JOINER	
FORM SMS-11 · REQUIRED BEFORE ASSIGNED DUTIES	
SECTION 1 - ESCAPE AND ASSEMBLY	
1.1 ROUTE FROM OWN CABIN TO MUSTER STATION WALKED IN DAYLIGHT. SIGNED: S.P.	
1.2 ALTERNATIVE ESCAPE ROUTE FROM ACCOMMODATION IDENTIFIED. SIGNED: S.P.	
1.3 EMERGENCY ESCAPE TRUNK FROM ENGINE ROOM LOCATED AND WALKED. SIGNED: N.W.	
SECTION 2 - EQUIPMENT LOCATED	
2.1 LIFEJACKET AND IMMERSION SUIT IN OWN CABIN, SIZES CHECKED. SIGNED: S.P.	
2.2 NEAREST TWO FIRE STATIONS IDENTIFIED, CONTENTS CHECKED. SIGNED: S.P.	
2.3 POSITION OF EEBD IN ENGINE ROOM SHOWN. SIGNED: N.W.	
SECTION 3 - SPACES VISITED	
3.1 FORECASTLE, MOORING STATIONS FORWARD AND AFT. SIGNED: S.P.	
3.2 ENGINE CONTROL ROOM, WORKSHOP, PURIFIER ROOM. SIGNED: N.W.	
3.3 BRIDGE, CHARTROOM, RADIO POSITION. SIGNED: S.P.	
SECTION 4 - CONFIRMATION	
Conducted by	Bosun (deck) and Second Engineer (engine)
Remarks	Emergency lighting in port alleyway noted as dim. Reported to C/O.

ACTIVITY - WORKING WITH THE DOCUMENT

1. Which items on this checklist were shown to the deck officer only, and which to the engineer only?
2. Section 4 records a remark. Why is that remark on a familiarisation form at all?
3. Rewrite item 1.1 as a full sentence using a preposition of place.
4. Design a fifth section for this checklist covering a space the form has missed.

NOTES

UNIT 2 | B3 READING FOR MEANING

Finding Your Way - and Your Way Out

Before you read
Name one word that describes a deck level and one word that describes a side of a ship.

Reading focus: Combine location words with a simple vessel plan.

A A location is clearer when it includes a named space and a deck level. Left and right can change when a person turns around. Port and starboard describe the vessel's sides when facing forward. A cadet can therefore use them even when the listener is facing a different direction.

B On the training vessel in Visual Resource 2, the bridge is on Deck 5. The radio room is next to it. Cabins are on Deck 3, and the galley and messroom are on Deck 2. The engine control room is on Deck 1. The workshop is aft of the engine control room on the same deck.

C A main stairway connects Decks 1 to 5. From the Deck 3 cabin alleyway, the normal route to the muster station goes up one deck to the port side of Deck 4. A separate escape trunk connects Deck 1 directly to Deck 4. It provides an alternative way out from the machinery area.

D During familiarisation, the trainer shows both routes and asks cadets to explain them. A box in an alleyway is reported, not ignored. If a route is obstructed during an emergency, crew follow the ship's emergency instructions and use a safe available alternative. The classroom plan helps students practise language; it is not the arrangement of every vessel.

Word support

alternative: another possible choice | **obstruct**: block the way | **landmark**: an easily recognised reference point

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S3; see Sources and editorial notes.

CLASS NOTES

UNIT 2 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. What is the article mainly about?

2. On which deck is the bridge?

3. Where is the workshop in relation to the engine control room?

4. What two decks does the separate escape trunk connect?

5. What does obstructed mean in paragraph D?

6. What does It refer to in the last sentence of paragraph C?

7. Explain the normal route from the Deck 3 cabin alleyway to the muster station.

8. Why are port and starboard more useful than left and right here?

9. Use Visual Resource 2. Write a sentence locating the radio room.

10. Write a short message reporting a box that blocks the cabin alleyway on Deck 3.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 2 | C GRAMMAR - FORMS AND MEANING

Prepositions of place; there is / there are

Use there is or there are to introduce something in a location. Use a preposition to place it relative to another named object. Do not expect the listener to guess which deck or side you mean.

Meaning	Form	Example
One item	There is + singular noun	There is a fire station beside the door.
Two or more	There are + plural noun	There are two escape routes.
Negative	There is not / There are not	There are not any boxes in the alleyway.
Question	Is there / Are there ...?	Is there an escape trunk on this deck?
Higher / lower	above / below	The bridge is above the cabins.
Ship direction	forward of / aft of; on the port side	The workshop is aft of the control room.

Choose the reference point

The radio room is next to the bridge. The object being located is the radio room; the reference point is the bridge. Reversing a relation can change the meaning: A is above B means B is below A.

On, in and at

Use on with a deck or side: on Deck 4, on the port side. Common shipboard phrases include on the bridge, in the engine room and at the muster station. Learn the complete phrase.

Introduce, then describe

There is an extinguisher here. It is beside the door. There introduces its existence; it refers to the extinguisher already mentioned. Use ship directions when they remove ambiguity; ordinary next to and behind remain useful with a clear reference.

Examples are for language learning. Sources: S1; see editorial notes.

CLASS NOTES

UNIT 2 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: There is two fire stations. Correct: There are two fire stations. Incorrect: in the port side. Correct: on the port side.

Study the examples

1. There are two anchors on the forecastle.

2. The purifier room is above the workshop.

3. The workshop is aft of the engine control room.

4. The muster list is next to the cabin door.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. _____ two anchors on the forecastle.

2. Use the dialogue: the control room is _____ decks below the main deck.

3. The pilot ladder is rigged _____ the port side.

4. _____ an escape trunk on this deck? (one trunk)

5. The workshop is _____ of the control room, towards the stern.

6. The muster list is _____ to the cabin door.

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 2 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Use there is: One extinguisher is beside the door. -> There is one extinguisher beside the door.

Activity B - rewrite as instructed

1. Rewrite using there is or there are: Two anchors are on the forecastle.

2. Rewrite using above: The workshop is below the purifier room.

3. Rewrite as a question: There is an escape trunk on the port side.

4. Rewrite as a negative: There are lifejackets in the messroom.

5. Rewrite using aft of: The control room is forward of the workshop.

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. There is two fire stations in the alleyway.

2. The pilot ladder is rigged in the port side.

3. The muster list is next the cabin door.

4. There are a lifejacket in every cabin.

5. The workshop is aft from the engine control room.

CLASS NOTES

UNIT 2 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
radio room / next to / bridge -> The radio room is next to the bridge.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. there / four cargo holds / on this vessel

2. the emergency escape trunk / port side / boat deck

3. the sounding pipes / starboard side / floor plate level

4. there / not / any fire station / on the forecastle

5. the muster list / next to / every cabin door

Activity E - your turn

Use the vessel plan in Visual Resource 2. Write six sentences locating six different spaces. Use there is or there are at least twice and four different location expressions. Keep each relation consistent with the plan.

D SPEAKING PRACTICE

pairs, information gap

One of you holds a ship's general arrangement plan; the other does not. Without showing the plan, direct your partner from one space to another. The listener draws the route. Accuracy of prepositions decides whether the route is right.

STUDENT A - THE GUIDE

You have the ship's plan. Choose a starting space and a destination without naming the destination. Give directions one step at a time using forward, aft, port, starboard, above and below. Do not point.

STUDENT B - THE NEWCOMER

You have a blank deck outline. Listen and draw the route as you hear it. Ask for a repeat if a direction is unclear. At the end, name the space you have arrived at.

PHRASE BANK - USE AT LEAST FOUR OF THESE

- Start at the ...
- Turn to port at the ...
- It is directly aft of the ...
- Is it above or below the main deck?
- Go forward along the starboard side.
- Go down one deck.
- Say again, please.
- I have arrived at the ...

D HOW TO RUN THE TASK

follow the steps in order

1. Student A chooses a start and a destination but keeps the destination secret.
2. Give one instruction at a time and wait for confirmation before continuing.
3. Student B draws the route and repeats each instruction back before drawing it.
4. When B arrives, B names the space. A confirms or corrects.
5. Swap roles and repeat with a different destination, one deck or engine each.
6. Compare drawings with the plan. Which preposition caused the biggest error? !

ACTIVITY - AFTER YOU HAVE SPOKEN

1. Which preposition caused the biggest error in your partner's drawing?

2. Write the one instruction that was hardest to follow, then rewrite it more clearly.

3. Name two spaces you could not describe without pointing. Learn those words tonight.

NOTES

Use the supplied Visual Resource 2 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

E PRACTICAL ACTIVITY - SAFETY EQUIPMENT HUNT

group task

on board, in a mock-up space, or using a general arrangement plan, 45 minutes Working in pairs, locate items of safety equipment and record the position of each in English. The language aim is accurate location description; the professional aim is the familiarisation every seafarer must complete on joining.

YOU WILL NEED

- A general arrangement plan or access to the training vessel
- One recording sheet per pair
- A copy of the muster list
- A stopwatch or phone timer

E PROCEDURE

work through in order

1. Form pairs, one deck and one engine student where possible.
2. Your teacher gives you eight items of safety equipment to find.
3. Locate each item and write its position in one full sentence using a preposition of place.
4. For each item, write one sentence stating what it is used for.
5. Time yourselves. You have twenty minutes for all eight.
6. Return and read three of your location sentences aloud. The class must identify the item from the location alone.
7. Finally, without notes, state the route from your classroom to the nearest muster station.

E OBSERVATION CHECKLIST

for the teacher or a peer observer

The observer ticks one box per row while the group presents. Every row describes something that can be seen or heard, so two observers should agree.

Observable behaviour	Yes	Partly	Not yet
Uses on, at, above, below and next to correctly.	☐	☐	☐
Uses forward, aft, port and starboard rather than left and right.	☐	☐	☐
States the deck level as well as the fore-and-aft position.	☐	☐	☐
Uses there is and there are with the correct singular or plural form.	☐	☐	☐
States the purpose of each item in a complete sentence.	☐	☐	☐
Asks for repetition in English when an instruction is unclear.	☐	☐	☐

ACTIVITY - WRITE IT UP

1. Write the position of three items of safety equipment you found, one sentence each.

2. Which item took your pair longest to find, and what made it difficult?

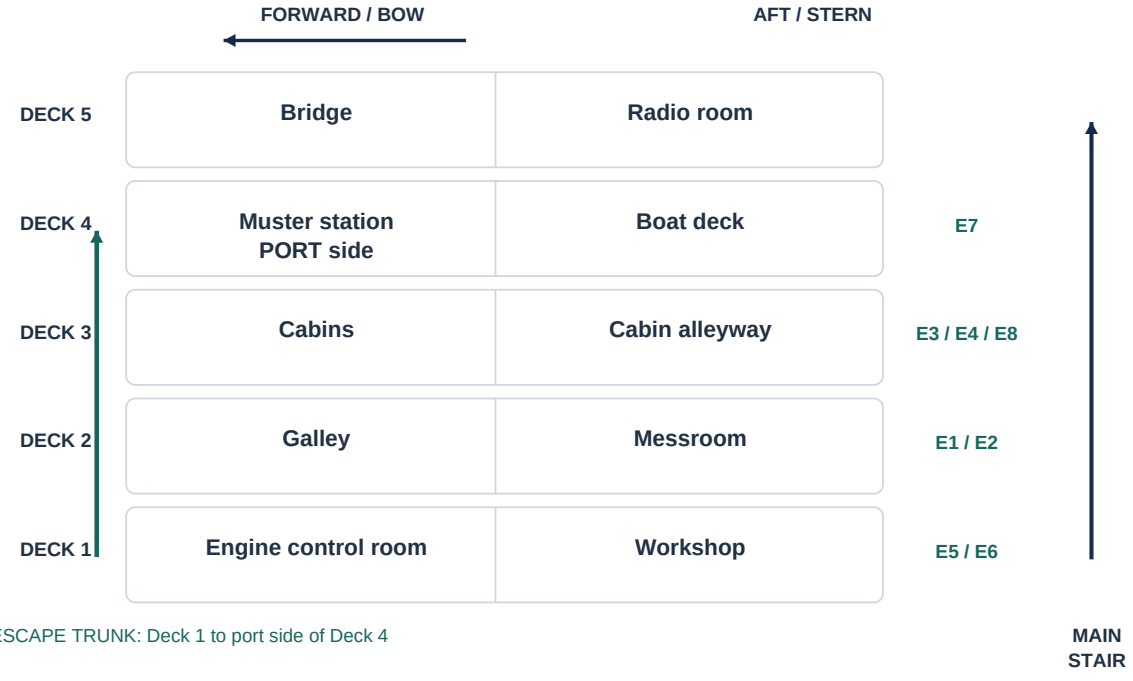

3. Write the route from this classroom to the nearest muster station, in four sentences.

Use the supplied Visual Resource 2 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

UNIT 2 | VISUAL AND PRACTICAL RESOURCE

A vessel plan you can read

Use this plan for the B3 reading and the route activity. The numbers show deck levels. Equipment codes are explained below; they are classroom labels, not official safety symbols.

Simplified elevation for language tasks. Not to scale. Port/starboard are stated in labels, not inferred from this side view.

Code	Equipment and location
E1 / E2	E1 fire extinguisher: galley entrance, Deck 2. E2 fire hose: messroom entrance, Deck 2.
E3 / E4	E3 lifejacket locker: cabin alleyway, Deck 3. E4 manual alarm point: alleyway exit, Deck 3.
E5 / E6	E5 EEBD: ECR exit, Deck 1. E6 fire extinguisher: workshop entrance, Deck 1.
E7 / E8	E7 lifebuoy: boat-deck rail, Deck 4. E8 immersion suit locker: cabin area, Deck 3.

EEBD = emergency escape breathing device. It is for escape, not firefighting or entry. Locations are invented for language practice.

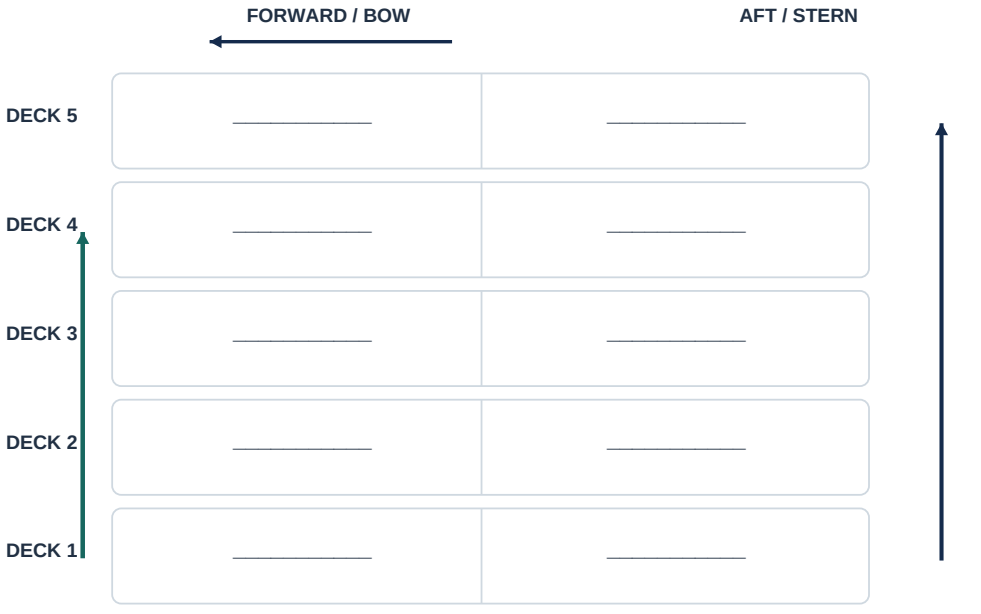

STUDENT A ROUTE CARDS - DO NOT SHOW STUDENT B
Round 1: Deck 3 cabin alleyway to Deck 4 port muster station.
Round 2: Deck 1 ECR to Deck 2 galley via the main stair.
Round 3: Deck 1 to Deck 4 via the separate escape trunk.

CLASS NOTES

UNIT 2 | VISUAL AND PRACTICAL RESOURCE

Student B: draw and check the route

Do not look at Student A's reference plan while listening. Write the room names as A describes them. Trace the route and confirm the destination. Change roles with a fresh copy.

ESCAPE TRUNK: Deck 1 to port side of Deck 4

Simplified elevation for language tasks. Not to scale. Port/starboard are stated in labels, not inferred from this side view.

Route log	My notes
Starting space / deck	
Directions received	
Arrival space / deck	
One clarification question	

LISTENER CHECK
Ask for a repeat when a direction is unclear. At the end, state your arrival space and deck, then compare your drawing with Student A's plan. Do not write a destination before you have heard the directions.

UNIT 2 | VISUAL AND PRACTICAL RESOURCE

Safety-equipment hunt: recording sheet

Use the E1-E8 codes on V2a. Find each item and write one full location sentence. Use the purpose bank to write what it is for. This is a paper task, not permission to handle equipment.

LANGUAGE SUPPORT
Purpose bank: fight a suitable small fire if trained and safe to do so; supply water for trained firefighting; help a person float; raise an alarm; assist escape from a hazardous atmosphere; provide a flotation aid from the deck; reduce heat loss in water. Some purposes are used more than once.

Code	Location sentence	Purpose sentence
E1		
E2		
E3		
E4		
E5		
E6		
E7		
E8		

Training muster station	Port side of Deck 4
Check before finishing	I stated the equipment, named space, deck and purpose.

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET

complete without looking back

Part 1 - Match the term to its meaning.

1.	forecastle		a. The marked way out of a space in an emergency
2.	engine control room		b. The forward part of the upper deck
3.	bilge		c. A passage inside the accommodation
4.	alleyway		d. Where hoses and extinguishers are kept
5.	tank top		e. The lowest internal part of the hull
6.	escape route		f. A door that seals against water
7.	watertight door		g. The floor of a cargo hold above the double bottom
8.	fire station		h. Where machinery is monitored and operated

Part 2 - Complete each sentence with one word.

1. _____ are two escape routes from the engine room.
2. The pilot ladder is rigged on the _____ side, one metre above the water.
3. The workshop is _____ of the engine control room.
4. The purifier room is one deck _____ the workshop.
5. Never obstruct an _____ route with stores or equipment.
6. Close all _____ doors before the vessel proceeds to sea.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. Describe the position of the engine control room on a vessel you know, using two prepositions.

2. Why is it useful to practise the escape route and identify its signs during familiarisation?

3. Explain the difference between saying "there is" and "it is" when describing equipment.

Part 4 - Describe your own route to the muster station.

Write five to seven sentences describing the route from your cabin to your muster station. Use at least four different prepositions of place and name every space you pass through.

SELF-CHECK

- ☐ I can name at least twelve spaces on board in English.
- ☐ I can say where something is using forward, aft, port and starboard.
- ☐ I can give directions from one space to another.
- ☐ I can say what each item of safety equipment is for.

NOTES

UNIT 2 SUMMATIVE TEST

Around the Ship

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. The forward part of the upper deck, where anchoring gear is worked. _____
2. A passage or corridor inside the accommodation. _____
3. The lowest internal part of the hull, where water collects. _____
4. The compartment from which machinery is monitored. _____
5. The marked way out of a space in an emergency. _____
6. A door that seals a compartment against water. _____
7. A position where hoses and extinguishers are kept. _____
8. The floor of a cargo hold above the double bottom. _____
9. Where crew assemble when the general alarm sounds. _____
10. The block containing cabins, messrooms and offices. _____
11. An enclosed compartment in which cargo is carried. _____
12. The space from which the vessel is navigated. _____
13. The compartment containing the main and auxiliary machinery. _____
14. Toward the bow / toward the stern. _____

Word bank: accommodation · alleyway · bilge · bridge · cargo hold · engine control room · engine room · escape route · fire station · forecastle · forward / aft · muster station · tank top · watertight door

B. GRAMMAR

one mark each **14 marks**

1. _____ two anchors on the forecastle.
2. The pilot ladder is rigged _____ the port side.
3. The workshop is _____ of the engine control room, behind it.
4. The purifier room is one deck _____ the workshop.
5. _____ an emergency escape trunk on the port side?
6. The muster list is _____ to the cabin door.
7. The bilges are sounded _____ the starboard side, at floor plate level.
8. Correct the error: There is two fire stations in the alleyway.

_____

9. Correct the error: The muster list is next the cabin door.

_____

10. Correct the error: The workshop is aft from the engine control room.

_____

11. Rewrite using above: The workshop is below the purifier room.

_____

12. Make it negative: There are lifejackets in the messroom.

_____

13. Build a sentence: the sounding pipes / starboard side / floor plate level

_____

14. Build a sentence: there / not / any fire station / on the forecastle

_____

C. READING

answer in full sentences **14 marks**

MV Coral Star has four cargo holds. Hold number one lies directly aft of the forecastle, where the windlass and both anchors are worked. The accommodation is aft, and there is a fire station at each end of the main alleyway, each with hoses, extinguishers and two sets of fire gear. The engine control room is two decks below the main deck. Forward of it is the main engine; aft of it, behind the watertight door, is the workshop, with the purifier room directly above. Two escape routes lead out of the engine room: the main stairway, and an emergency trunk on the port side that comes out on the boat deck. Every crew member's muster station is marked on the list posted beside their cabin door.

1. How many cargo holds does the vessel have, and where is hold number one?

2. Where are the fire stations, and what is kept at each?

3. Describe the position of the workshop using two prepositions of place.

4. Name both escape routes. Where does the emergency escape trunk lead?

5. Which of the spaces named would an engineer use most, and why?

6. Where is the purifier room in relation to the workshop?

7. Where is a crew member's muster station recorded, according to the passage?

D. WRITING — 12 marks

Describe the route from your own cabin to your muster station on a vessel you know, or from this classroom to the nearest assembly point. Write six to eight sentences, name every space you pass through, and use at least four different prepositions of place.

E. SPEAKING — 8 marks

assessed by the teacher Direct your teacher from one named space on board to another, without pointing and without naming the destination until the end.

Criterion	2	1	0
Uses forward, aft, port and starboard rather than left and right	☐	☐	☐
States the deck level as well as the fore-and-aft position	☐	☐	☐
Gives one instruction at a time and waits for confirmation	☐	☐	☐
Uses there is and there are with the correct form	☐	☐	☐

UNIT 3

Watchkeeping and Routine Operations

Giving and repeating back standard orders, describing what is happening now, and handing over a watch so that nothing is lost between two people.

MODEL COURSE 3.17 LINKAGE

Core Section 1 - routine operations, watchkeeping duties, standard helm and engine orders.
STCW Table A-II/1 and A-III/1: understand and give orders, and record routine operations.

O LEARNING OBJECTIVES

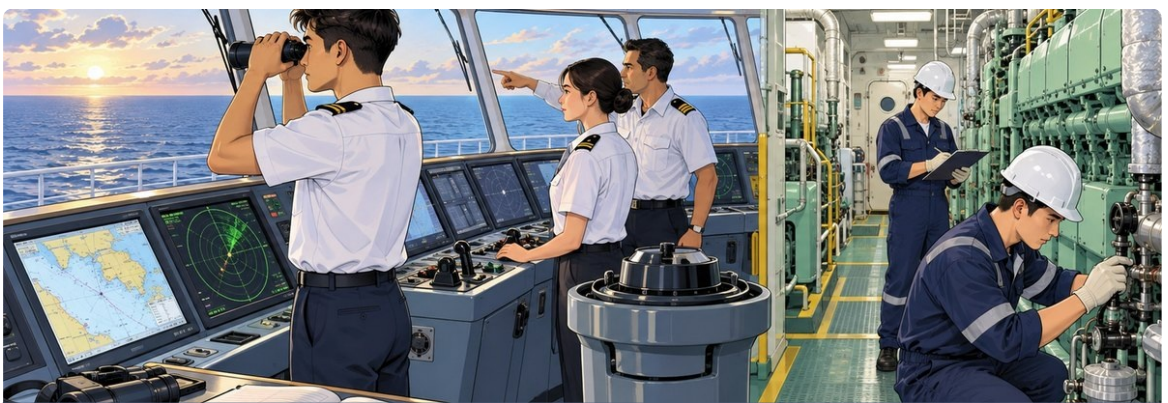

tagged with cognitive level

1	Give and correctly repeat back standard wheel and engine orders.	APPLY	DECK + ENGINE
2	Describe an operation in progress using the present continuous.	UNDERSTAND	DECK + ENGINE
3	Distinguish a routine report from an order and respond appropriately to each.	ANALYSE	DECK + ENGINE
4	Hand over a watch, covering position, traffic, machinery status and standing orders.	APPLY	DECK + ENGINE

C CAN-DO CHECKLIST

tick when you can do it unaided

- [ ] I can repeat back a wheel order exactly, including the figure.
- [ ] I can say what is happening now, as opposed to what usually happens.
- [ ] I can report a machinery reading with its unit.
- [ ] I can hand over a watch in a fixed order without forgetting an item.

Bridge watch: officers carry out routine watchkeeping duties.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

wheel order *n.*
A helm command given in a standard form to the helmsman.
e.g. *Starboard ten is a standard wheel order.*

midships *phr.*
The order to bring the rudder to the centreline.
e.g. *Midships. Wheel is amidships, sir.*

steady as she goes *phr.*
Keep the heading the vessel has at this moment.
e.g. *Steady as she goes. Steady on 085 degrees.*

engine order *n.*
A command for a change of engine speed or direction.
e.g. *Half ahead is an engine order.*

stand by engine *phr.*
The order that the engine must be ready for manoeuvring.
e.g. *Stand by engine at 0540.*

finished with engine *phr.*
The order releasing the engine room from manoeuvring duty.
e.g. *Finished with engine at 0715.*

manoeuvring mode *n.*
The engine setting used for frequent speed changes in port.
e.g. *The engine has been on manoeuvring mode since 0530.*

RPM *abbr.*
Revolutions per minute; the turning speed of the engine.
e.g. *Main engine now at seventy-two RPM.*

to repeat back *v. phr.*
To say an order again, word for word, so it can be checked.
e.g. *Every wheel order must be repeated back exactly.*

heading *n.*
The direction the bow is pointing, given in three figures.
e.g. *Question: what is your heading?*

to take over the watch *v. phr.*
To accept responsibility for the watch from another officer.
e.g. *I have the watch at 0800.*

standing orders *n. pl.*
The Master's or Chief Engineer's written instructions, always in force.
e.g. *Call the Master if visibility falls below two miles.*

sounding *n.*
A measured depth of liquid in a tank or bilge.
e.g. *The sounding in number three tank is 1.2 metres.*

rounds n. pl.
A scheduled inspection walk through the machinery spaces.
e.g. *The duty engineer makes rounds every two hours.*

logbook entry *n.*
A written record of an event, with its time.
e.g. *Make a logbook entry for every change of course.*

to monitor *v.*
To watch an instrument or situation continuously.
e.g. *Monitor the exhaust temperatures during the manoeuvre.*

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Which three terms are orders rather than reports?

2. Choose two terms that can describe machinery status in an engine logbook.

3. Write one wheel order and its correct repeat-back:

NOTES

B READING AND LISTENING

read aloud in role, then answer

THE SITUATION

MV Andaman Trader is at sea on passage. The Second Officer is handing the bridge watch to the Third Officer at 0800. At the same moment the engine room is changing over below.

Zero Eight Hundred Handover

Recording script - approx. 3 minutes

SECOND OFFICER

Good morning. Position at 0755: eleven degrees forty north, one hundred degrees twelve east. We are steering 085 by gyro, making twelve point four knots.

THIRD OFFICER

085, twelve point four. Understood.

SECOND OFFICER

Traffic: one crossing vessel on the port bow, CPA one point two miles in eighteen minutes. I am monitoring her. Nothing else of concern.

THIRD OFFICER

One crossing vessel port bow, CPA one point two. Are we on autopilot?

SECOND OFFICER

Yes, autopilot, both radars on the six mile range. Master's standing orders say call him if visibility falls below two miles or if any CPA drops below one mile.

THIRD OFFICER

Understood. I have the watch.

SECOND OFFICER

You have the watch. Time 0800.

THIRD ENGINEER

Main engine is running at seventy-two RPM, steady. Exhaust temperatures are all normal. What is outstanding?

SECOND ENGINEER

Number two generator is on load. Number one is on standby. I am watching the fuel oil purifier, it tripped once at 0620 and It was reset under the authorised procedure. Check its status on your first rounds.

THIRD ENGINEER

Purifier tripped 0620, reset, check on rounds. Soundings?

SECOND ENGINEER

All bilges sounded at 0600, all normal, figures are in the logbook. Bunker tank number three is at one point two metres.

THIRD ENGINEER

Understood. I have the watch. !

Two decks below, the engine room handover is taking place at the same time. Both officers sign the handover. The bridge and the engine room now hold the same picture of the ship at 0800.

NOTES

UNIT 3 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. What course and speed is the vessel making, and how is she being steered?

2. What traffic is the Second Officer monitoring, and what is the CPA?

3. Under what two conditions must the Master be called?

4. What happened to the fuel oil purifier at 0620, and what must the Third Engineer do about it?

5. Why does each officer repeat the information back before accepting the watch? B

Language in context

1. "I have the watch" — find this phrase and the reply to it. Why are both said aloud?

2. "is running" / "tripped" — find both verbs. Which describes now, and which the past?

3. "I am monitoring her" — find this. Why present continuous and not present simple?

4. "outstanding" — find this word. What does it mean in a handover?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “Why a Handover Needs More Than “Everything Is Fine””. Compare the information you hear with the information a reader can verify.

CLASS NOTES

B2 READING A WRITTEN DOCUMENT - DECK AND ENGINE LOGBOOK EXTRACT

the same situation, on paper

The handover you read was spoken. This is what the same watch looks like written down. Notice how little is said, and how much of it is figures.

DECK LOGBOOK AND ENGINE LOGBOOK - 0400 TO 0800

EXTRACT · ZONE TIME UTC+7

DECK LOGBOOK	
0400	Watch taken over by 2/O. Course 085 gyro, autopilot. Speed 12.4 kn.
0430	Barometer 1011.2, steady. Wind SW force 4. Visibility good.
0612	Crossing vessel observed port bow, range 9 M. Plotted, CPA 1.2 M.
0755	Position 11 40.0 N, 100 12.0 E by GPS. Distance run 302.5 M.
0800	Watch handed over to 3/O. All information passed. Signed 2/O, 3/O.
ENGINE LOGBOOK	
0400	Watch taken over by 2/E. M/E 72 rpm. No. 2 generator on load.
0600	All bilges and tanks sounded. Figures normal. No. 3 bunker 1.2 m.
0620 F.O. purifier tripped on high outlet temperature; authorised reset recorded.	
0730	Exhaust temperatures all within normal range. Scavenge pressure normal.
0800	Watch handed over to 3/E. Purifier trip reported. Signed 2/E, 3/E.

ACTIVITY - WORKING WITH THE DOCUMENT

1. Find the three entries that appear in both the spoken handover and the written logbooks.
2. The logbook uses abbreviations such as M/E, 2/O and kn. Write out four of them in full.
3. Which event should the incoming engineer follow up? Explain using the record.
4. Write the 0800 entry for your own imaginary watch, in the same style and length.

NOTES

UNIT 3 | B3 READING FOR MEANING

Why a Handover Needs More Than “Everything Is Fine”

Before you read
What information would you need before taking over a task from another person?

Reading focus: Separate normal arrangements, current changes and outstanding work.

A At a watch handover, the next officer needs a clear picture of the vessel now. Everything is fine does not explain which equipment is working, which task is unfinished or when another check is due. A useful handover makes changes easy to notice.

B On MV Blue Horizon, the bridge handover begins at 0800. The outgoing officer reports that visibility is decreasing in rain. The next weather update is due at 0830. The incoming officer records both the present condition and the time of the next update. The officer also checks the applicable standing orders.

C In the engine control room, the engineers discuss a different change. No. 2 fresh-water pump is out of service, and No. 1 pump is in use. The fault was recorded at 0645. The Second Engineer has arranged an inspection for 1000, but the cause has not yet been confirmed. A planned inspection is not a completed repair.

D The receiving officer asks questions about anything unclear. Important figures are checked, and unfinished work is recorded with a responsible person and a time. On this vessel, the handover record separates normal arrangements, current changes and outstanding work. This helps the next watch see what needs attention without treating an assumption as a fact.

Word support

outstanding: not yet completed | **current**: true at the present time | **confirmed**: checked and established

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S2; see Sources and editorial notes.

CLASS NOTES

UNIT 3 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. Give a suitable alternative title for the article.

2. When does the bridge handover begin?

3. When is the next weather update due?

4. Which fresh-water pump is in use?

5. What does out of service mean here?

6. What does This refer to in the last sentence?

7. List the fault-recording time and the planned inspection time in time order.

8. Why would “No. 2 pump has been repaired” be an incorrect handover entry?

9. Write a present continuous sentence about the bridge condition.

10. Write two short sentences giving the pump status and the outstanding action.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 3 | C GRAMMAR - FORMS AND MEANING

Present continuous and present simple

The present continuous describes an action happening now or a temporary situation. The present simple describes a regular duty or standing fact. Both can appear in a handover, but they give different information.

Meaning	Form	Example
Action now	am / is / are + verb-ing	The main engine is running at 72 RPM.
Temporary situation	am / is / are + verb-ing	We are steering by hand during this approach.
Routine	present simple	The duty engineer makes rounds every two hours.
Negative now	am / is / are + not + verb-ing	No. 1 generator is not running.
Question now	Am / Is / Are + subject + verb-ing?	Is the purifier running normally?
State in this meaning	usually present simple	I understand the instruction.

Build and check the verb phrase

The officer + is + monitoring + the target. The -ing word needs am, is or are. In a question, put the helper first: Is the officer monitoring the target?

Spelling

Usually add -ing: check -> checking. Drop a silent final e: make -> making. Some short verbs double the last consonant: run -> running, stop -> stopping. Learn these common forms as a set.

Use the situation, not just a signal word

Now and currently often suggest the continuous. Every watch often suggests a routine, but temporary repeated actions can also use the continuous. State verbs such as know, understand and need normally use the simple form in these examples.

Examples are for language learning. Sources: S1; S2.

CLASS NOTES

UNIT 3 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: The main engine running. Correct: The main engine is running. Incorrect: Are we steer by hand? Correct: Are we steering by hand?

Study the examples

1. The Third Officer is plotting the position now.

2. The watch changes at 0800 on this vessel.

3. We are monitoring two targets at the moment.

4. The Chief Officer usually checks the deck before arrival.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. The main engine _____ (run) at 72 RPM now.

2. As a normal routine, the duty engineer _____ (make) rounds every two hours.

3. _____ we _____ (steer) by hand at the moment?

4. No. 1 generator _____ (not run) now; it is on standby.

5. I _____ (monitor) the target at the moment.

6. The watch _____ (change) at 0800 every day.

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 3 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Describe now: The officer checks the radar. -> The officer is checking the radar now.

Activity B - rewrite as instructed

1. Rewrite in the present continuous: The main engine runs at seventy-two RPM.

2. Rewrite in the present simple: The duty engineer is making rounds every two hours.

3. Rewrite as a question: We are steering by autopilot.

4. Rewrite as a negative: Number one generator is running.

5. Rewrite using at the moment: The Second Officer monitors a crossing vessel.

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. The main engine is run at seventy-two RPM now.

2. I am knowing the standing orders.

3. As a normal routine, the duty engineer make rounds every two hours.

4. Are we steer by autopilot or by hand?

5. Number one generator not is running; it is on standby.

CLASS NOTES

UNIT 3 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
cadet / check / list / now -> The cadet is checking the list now.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. main engine / run / 72 rpm / at the moment

2. I / monitor / crossing vessel / port bow

3. the watch / change / 0800 and 1200 / every day

4. number one generator / not run / it / be / on standby

5. what / you / do / at the moment ?

Activity E - your turn

Write eight sentences describing what is happening on a vessel at this moment and what normally happens every day. Use four
present continuous forms and four present simple forms, and make clear which is which.

D SPEAKING PRACTICE

pairs, then a four-way relay

Practise the two exchanges that must never go wrong: a wheel or engine order with its repeat-back, and a complete watch handover. In both, the listener must reproduce the figure exactly.

STUDENT A - OFFICER HANDING OVER

You have been on watch for four hours. Prepare four facts before you speak: position or machinery status, traffic or outstanding work, the equipment in use, and any standing order in force. Deliver them in that order.

STUDENT B - OFFICER TAKING OVER

Listen and repeat back every figure. Ask at least two questions. Do not say "I have the watch" until you can restate all four facts without help.

PHRASE BANK - USE AT LEAST FOUR OF THESE

- Position at ... is ...
- Main engine is running at ... RPM.
- Say again your ...
- I have the watch.
- We are steering ... by gyro.
- What is outstanding?
- Understood.
- You have the watch. Time ...

D HOW TO RUN THE TASK

follow the steps in order

1. Work in pairs. Choose deck or engine and stay in that department for the first round.
2. Student A delivers the four facts. Student B repeats back every figure as it is heard.
3. Student B asks two questions, then formally takes the watch.
4. Swap roles and change department.
5. Now form groups of four and relay: A hands to B, B to C, C to D.
6. Compare D's final version with A's original notes. Which figure changed, and where? !

ACTIVITY - AFTER YOU HAVE SPOKEN

1. Which figure changed during the four-way relay, and at which link did it change?

2. Write one sentence you would add to your own handover that your partner forgot.

3. Why is it easier to lose a figure than a fact? Answer in two sentences.

NOTES

Use the supplied Visual Resource 3 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

E PRACTICAL ACTIVITY - ORDER AND REPEAT-BACK DRILL

group task

bridge simulator, engine simulator or classroom, 45 minutes Standard orders exist because ordinary English is too flexible for a bridge or an engine control room. This drill builds the automatic repeat-back that an examiner listens for, under increasing time pressure.

YOU WILL NEED

- A set of order cards: wheel orders and engine orders
- A stopwatch
- A scoring sheet per group
- A mock telegraph or helm indicator if available

E PROCEDURE

work through in order

1. Work in threes: one gives orders, one repeats back and executes, one scores.
2. Round one: the order giver reads a card and waits. The executor repeats back in full.
3. Round two: the giver does not wait. Give the next order only after an accurate response; do not reward speed over accuracy.
4. Round three: the giver mixes wheel orders, engine orders and reports. The receiver repeats standard orders and confirms important figures in reports.
5. The scorer marks one point for an exact repeat-back and deducts one for a changed figure.
6. Rotate roles until each student has taken every position.
7. Finish with a written entry: record three of the orders in logbook form, with times.

E OBSERVATION CHECKLIST

for the teacher or a peer observer

The observer ticks one box per row while the group presents. Every row describes something that can be seen or heard, so two observers should agree.

Observable behaviour	Yes	Partly	Not yet
Repeats back the order in full, including the figure.	☐	☐	☐
Distinguishes an order, which is repeated, from a report, which is acknowledged.	☐	☐	☐
Uses standard wording rather than everyday paraphrase.	☐	☐	☐
Maintains accuracy when the pace increases.	☐	☐	☐
Says figures one digit at a time where required.	☐	☐	☐
Records the order correctly with the time in 24-hour form.	☐	☐	☐

ACTIVITY - WRITE IT UP

1. Write three of the orders from the drill as logbook entries, with times.

2. Which round produced the most errors, and what caused them?

3. Write one rule you would give a cadet about repeating back orders.

Use the supplied Visual Resource 3 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

UNIT 3 | VISUAL AND PRACTICAL RESOURCE

Two departments, one handover time

READ THE TIME FIRST
MV Blue Horizon | 0800 LT | Example handover status

BRIDGE STATUS BOARD

Normal / standing arrangement	Current change / next action
Watch handover: 0800 LT	Visibility is decreasing in rain.
Use the applicable standing orders.	Next weather update: 0830 LT.
Confirm important figures.	Incoming officer checks the record before taking over.

ENGINE STATUS BOARD

Item	Status at 0800 LT
No. 1 fresh-water pump	In use.
No. 2 fresh-water pump	Out of service. Fault recorded 0645.
Investigation	Cause not confirmed.
Outstanding action	Second Engineer: inspection at 1000.

V3.1. State one routine using the present simple.

V3.2. State one changing condition using the present continuous.

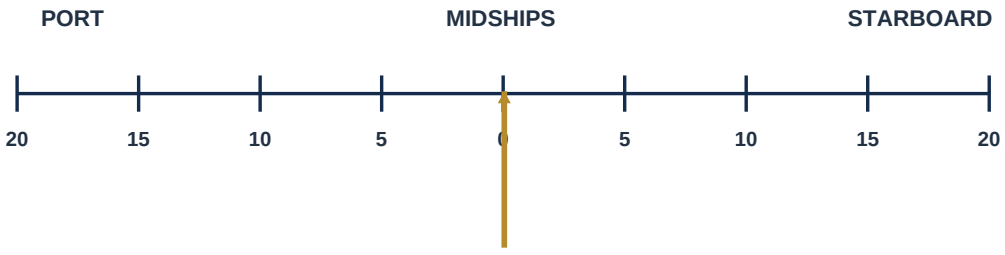

V3.3. Give the unavailable equipment and the next action, with owner and time.

CLASS NOTES

UNIT 3 | VISUAL AND PRACTICAL RESOURCE

Standard-order cards and a paper helm

Use a paper pointer, not machinery. One learner gives an order, one repeats it and moves the pointer, and one observes. Accuracy comes before speed. Stop and clarify an unclear order.

Wheel-order cards	Engine-order cards
Port five	Stand by engine
Starboard ten	Dead slow ahead
Midships	Half ahead
Port fifteen	Stop engine
Starboard twenty	Dead slow astern
Steady as she goes	Finished with engine

SPEAKING DISTINCTION
Wheel orders are repeated in their standard wording. Rudder angles are spoken as whole angle words: port fifteen. Courses use separate digits: zero eight five. A progress report is not a substitute for the required repeat-back.

Observed skill	Yes / not yet
Exact order repeated before simulated response	
Unclear instruction queried	
Action and completion kept distinct	

Source: S2, General 10 and A2/1-2. Engine-order execution depends on propulsion and control arrangements; this is a language drill.

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET

complete without looking back

Part 1 - Match the term to its meaning.

1.	midships	a.	Keep the present heading
2.	steady as she goes	b.	A scheduled inspection of the machinery spaces
3.	stand by engine	c.	Bring the rudder to the centreline
4.	finished with engine	d.	Revolutions per minute
5.	rounds	e.	The engine is released from manoeuvring duty
6.	sounding	f.	The Master's permanent written instructions
7.	standing orders	g.	The engine must be ready for manoeuvring
8.	RPM	h.	A measured depth of liquid in a tank

Part 2 - Complete each sentence with one word.

1. The main engine _____ running at seventy-two RPM at the moment.
2. Every wheel order must be repeated _____ exactly, including the figure.
3. The duty engineer _____ rounds every two hours during an unmanned period.
4. _____ as she goes. Steady on 085 degrees.
5. The Master's _____ orders require a call if visibility falls below two miles.
6. I have the _____. Time zero eight hundred.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. Why are standard orders repeated accurately, and when should important report figures also be confirmed?

2. Give one example of a fact you would state in the present continuous during a handover, and one in the present simple.

3. What four items should every watch handover cover, and why is a fixed order useful?

Part 4 - Write a complete watch handover.

Choose deck or engine. Write six to eight sentences handing over your watch. Include at least two present continuous forms, one present simple routine, two figures with units, and one standing order.

SELF-CHECK

- [ ] I can repeat back a wheel order exactly, including the figure.
- [ ] I can say what is happening now, as opposed to what usually happens.
- [ ] I can report a machinery reading with its unit.
- [ ] I can hand over a watch in a fixed order without forgetting an item.

NOTES

UNIT 3 SUMMATIVE TEST

Watchkeeping and Routine Operations

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. The order to bring the rudder to the centreline. _____
2. Keep the heading the vessel has at this moment. _____
3. The engine must be ready for manoeuvring. _____
4. The engine room is released from manoeuvring duty. _____
5. A scheduled inspection walk through the machinery spaces. _____
6. A measured depth of liquid in a tank or bilge. _____
7. The Master's permanent written instructions. _____
8. To say an order again word for word so it can be checked. _____
9. The direction the bow is pointing, in three figures. _____
10. The turning speed of the engine, in revolutions per minute. _____
11. A helm command given in a standard form to the helmsman. _____
12. The engine setting used for frequent speed changes in port. _____
13. A written record of an event, with its time. _____
14. To watch an instrument or situation continuously. _____

Word bank: finished with engine · heading · logbook entry · manoeuvring mode · midships · rounds · RPM · sounding · stand by engine · standing orders · steady as she goes · to monitor · to repeat back · wheel order

B. GRAMMAR

one mark each **14 marks**

1. The main engine _____ (run) at seventy-two RPM at the moment.
2. The duty engineer _____ (make) rounds every two hours.
3. _____ we _____ (steer) by autopilot or by hand?
4. Number one generator _____ (not run); it is on standby.
5. I _____ (monitor) the crossing vessel on the port bow.
6. The watch _____ (change) at 0800 and 1200 every day.
7. At the moment, the officer _____ (check) the purifier status.
8. Correct the error: The main engine run at seventy-two RPM now.

_____

9. Correct the error: I am knowing the standing orders.

_____

10. Correct the error: Are we steer by autopilot or by hand?

_____

11. Rewrite in the present continuous: The Second Officer monitors a crossing vessel.

_____

12. Rewrite in the present simple: The watch is changing at 0800 every day.

_____

13. Build a sentence: number one generator / not run / it / be / on standby

_____

14. Build a sentence: what / you / do / at the moment ?

_____

C. READING

answer in full sentences **14 marks**

At 0800 the Second Officer handed over the bridge watch. The vessel was steering 085 by gyro on autopilot, making 12.4 knots. One crossing vessel was on the port bow with a closest point of approach of 1.2 miles in eighteen minutes, and the Second Officer was monitoring her. The Master's standing orders require a call if visibility falls below two miles or if any closest point of approach drops below one mile. Below, the Third Engineer took over at the same time. The main engine was running at 72 RPM, number two generator was on load and number one on standby. The fuel oil purifier had tripped once at 0620 and been reset, and the Third Engineer agreed to check it on his first rounds.

1. What course and speed was the vessel making, and how was she being steered?

2. What traffic was being monitored, and what was the closest point of approach?

3. Under what two conditions must the Master be called?

4. State the condition of the two generators at the time of handover.

5. What outstanding matter was passed to the Third Engineer, and what should he do about it?

6. At what RPM was the main engine running at the time of handover?

7. What must the Third Engineer check during his first rounds, according to the passage?

D. WRITING — 12 marks

Write a complete watch handover of six to eight sentences. Choose deck or engine. Include at least two present continuous forms, one present simple routine, two figures with their units, and one standing order.

E. SPEAKING — *assessed by the teacher* — 8 marks

Give and repeat back six standard orders. Your teacher will give the orders and you will execute and report.

Criterion	2	1	0
Repeats back each order in full, including the figure	☐	☐	☐
Distinguishes an order from a report	☐	☐	☐
Uses standard wording rather than everyday paraphrase	☐	☐	☐
Maintains accuracy when the pace increases	☐	☐	☐

UNIT 4

Position, Weather and Passage

Giving a position that another vessel can plot, reading a weather forecast, and saying what the ship will do next.

MODEL COURSE 3.17 LINKAGE

Core Section 1 - navigational routes, geographic location, weather conditions and forecasts.
STCW Table A-II/1: use English to report position, describe weather and state intentions.

O LEARNING OBJECTIVES

tagged with cognitive level

1	Give a position by latitude and longitude, and by bearing and distance from a mark.	APPLY	DECK + ENGINE
2	Read a weather forecast and state wind, sea, visibility and trend.	UNDERSTAND	DECK + ENGINE
3	Say what the vessel will do next, distinguishing a decision from a prediction.	APPLY	DECK
4	Convert a spoken position into a written logbook entry without error.	APPLY	DECK + ENGINE

C CAN-DO CHECKLIST

tick when you can do it unaided

- ☐ I can give my position in two different ways.
- ☐ I can say each digit separately so a figure cannot be misheard.
- ☐ I can describe wind force, sea state and visibility.
- ☐ I can state an intention using will or going to correctly.

Passage planning: officers discuss weather, route and position at sea.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

latitude *n.*
Distance north or south of the equator, in degrees and minutes.
e.g. *Latitude eleven degrees forty minutes north.*

longitude *n.*
Distance east or west of the prime meridian.
e.g. *Longitude one hundred degrees twelve minutes east.*

bearing *n.*
The direction of one point from another, in three figures.
e.g. *The buoy bears 125 degrees from my position.*

range *n.*
The distance to another vessel or object.
e.g. *Range is four miles and decreasing.*

fairway buoy *n.*
The mark showing the seaward entrance to a channel.
e.g. *Report when abeam of the fairway buoy.*

ETA *abbr.*
Estimated Time of Arrival.
e.g. *My ETA at the pilot station is 0630 hours.*

visibility *n.*
The greatest distance at which objects can be seen.
e.g. *Visibility is two miles in rain and falling.*

force *n.*
A step on the Beaufort scale describing wind strength, 0 to 12.
e.g. *Wind south-west, force seven, increasing.*

swell *n.*
Long waves travelled from a distant weather system.
e.g. *A heavy north-easterly swell is running.*

sea state *n.*
A description of the height and roughness of the waves.
e.g. *Sea state rough, wave height three metres.*

forecast *n.*
A statement of expected weather for a stated area and period.
e.g. *The forecast for the next 24 hours is deteriorating.*

to deteriorate *v.*
To become worse.
e.g. *Visibility is expected to deteriorate after midnight.*

to alter course *v. phr.*
To change the vessel's heading.
e.g. *I will alter course to starboard at 0400.*

draft *n.*
The vertical distance from the waterline to the lowest point of the keel.
e.g. *My draft is nine point six metres.*

under keel clearance *n.*
The water remaining between the keel and the seabed.
e.g. *Under keel clearance will be 1.8 metres at low water.*

passage plan *n.*
The approved plan for the voyage, berth to berth.
e.g. *The passage plan is on the chart table.*

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Which four terms would you need to give a position over the radio?
2. Which three terms describe weather rather than position?
3. Write your present position in two different ways:

NOTES

UNIT 4 | B READING AND LISTENING

The Noon Position and the Forecast

The situation
Noon on 4 March. These classroom calculations assume constant speed along the remaining route and no additional delay. Real passage decisions require the full navigational assessment.

MASTER What is our noon position?

SECOND OFFICER Latitude one one degrees four zero minutes North; longitude one zero zero degrees one two minutes East. Distance run in the last twenty-four hours is three zero two decimal five nautical miles.

MASTER What are the present heading and speed?

SECOND OFFICER Heading zero eight five degrees gyro; speed twelve decimal four knots. We have two two nine decimal four nautical miles to run along the remaining route.

MASTER What is the forecast for tonight?

SECOND OFFICER Wind south-west force five now, increasing to force seven after midnight. The sea is moderate, becoming rough, with a north-easterly swell of about two metres.

MASTER And visibility?

SECOND OFFICER Six nautical miles now. The forecast gives two nautical miles or less in rain squalls between 0200 and 0600.

MASTER We are going to secure movable objects and check the hatch cleats before 1700. Inform the Chief Officer and the engine room. What is the ETA?

SECOND OFFICER At twelve decimal four knots, 0630 tomorrow. If we maintain that speed until midnight and then reduce to eight knots, the calculated ETA is about 1005 tomorrow.

MASTER Send the later planning estimate to the agent and state the speed assumption. I will review the course and speed at 0400 if the motion becomes bad.

SECOND OFFICER Understood. I will record the forecast, the planned actions and the ETA assumptions separately.

Original classroom dialogue adapted from the supplied manuscript. Operational data are fictional; this is not a complete operating procedure.

Arithmetic: 229.4 / 12.4 = 18.5 h. At midnight, 80.6 NM remain; at 8 kn this is about 10 h 05 min. Future forms: S6.

CLASS NOTES

UNIT 4 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. State the vessel's noon position and the distance run in the last 24 hours.

2. What is the wind doing tonight, and when is the change expected?

3. What is the visibility now, and what is it forecast to become, and between what hours?

4. What two things does the Master want done before dark, and by what time?

5. What two ETAs are discussed, and what change in speed explains the later one?

Language in context

1. "one zero zero degrees, one two minutes" — find a spoken position. Why is each digit said separately?

2. "increasing to force seven" — find this. Which two words show that the weather is changing?

3. Find “going to secure”. What action is planned, and what deadline is given?

4. Find “I will alter course”. What condition does the Master attach to this intention?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “From Forecast to Passage Decision”. Compare the information you hear with the information a reader can verify.

CLASS NOTES

UNIT 4 | B2 SHIPBOARD DOCUMENT

Noon report - reading a written document

Compare the report with the dialogue. Do not confuse the current speed, the previous day's distance and a future ETA assumption.

NOON REPORT	MV ANDAMAN TRADER | 4 March | 1200 LT
Position	11°40.0′ N, 100°12.0′ E
Present heading / speed	085° gyro / 12.4 knots
Distance run, previous 24 h	302.5 nautical miles (average about 12.6 knots)
Remaining route distance	229.4 nautical miles to the pilot station
ETA assumption 1	0630 LT, 5 March, if 12.4 knots is maintained
ETA assumption 2	About 1005 LT, 5 March, if speed is reduced to 8 knots at midnight
Wind / sea / swell	SW force 5, increasing to 7 after midnight; moderate becoming rough; NE swell about 2 m
Visibility	6 NM observed; forecast 2 NM or less, 0200-0600
Barometer	1009.4 hPa, falling
Fuel consumption / remaining	VLSFO consumed 22.4 tonnes / remaining 486.2 tonnes
Planned action	Secure movable objects and check hatch cleats by 1700; engine room to be informed. Completion not yet reported.

Work with the document

1. Find four figures also given in the dialogue.

2. Why are two ETAs given, and which estimate is sent to the agent?

3. Name one observed condition and one forecast condition.

4. Write a later completion remark if the deck checks are confirmed complete at 1650 LT.

CLASS NOTES

UNIT 4 | B3 READING FOR MEANING

From Forecast to Passage Decision

Before you read
Which is a measurement: “visibility is six miles” or “visibility may decrease tonight”?

Reading focus: Distinguish observation, forecast and planned response.

A A weather report and a forecast answer different questions. A report describes conditions observed at a stated time. A forecast describes what is expected during a future period in an area. When an officer combines them, the record should make the difference clear.

B At 1200 LT on 18 September, MV Cedar Bay has 96 nautical miles remaining to its pilot station. Its planning speed is 12 knots. The noon observation gives south-westerly wind force 4 and visibility of six nautical miles. If that speed is maintained along the remaining route without delay, the passage takes eight hours and the ETA is 2000 LT the same day.

C The latest forecast expects visibility to decrease to two nautical miles in rain between 1600 and 2000. This is not a measurement already made at noon. The Master plans to review conditions at 1530 and has ordered a deck inspection by 1500. The engine room has been asked to report machinery readiness by 1545. Both departments need the same times.

D At 1530 the vessel still has 54 nautical miles to run. For this classroom calculation, the Master sets a new planning speed of nine knots for all of that distance. Six hours remain, so the revised ETA is 2130 LT. The officer tells the pilot station the new ETA and records its assumptions. A forecast, a speed calculation and a booking are related, but they are not the same kind of information.

Word support

forecast: a statement of expected conditions | **revise**: change after new information | **assumption**: something used in planning but not guaranteed

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S2, S6; see Sources and editorial notes.

CLASS NOTES

UNIT 4 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. What distinction is central to the article?

2. What is the observed visibility at 1200?

3. During what period is lower visibility forecast?

4. By what time must the engine room report readiness?

5. What does revised mean in paragraph D?

6. What does This refer to at the start of the second sentence of paragraph C?

7. Show the calculation for the original ETA using distance and speed.

8. Why should the officer not record two-mile visibility as the noon observation?

9. Write one sentence giving the revised ETA and the planning speed.

10. Write a present continuous sentence for the arranged review at 1530.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 4 | C GRAMMAR - FORMS AND MEANING

Talking about the future

Will, going to, the present continuous and the present simple can all refer to the future. Their meanings overlap. A form may emphasise a decision, plan, prediction, arrangement or timetable; it does not by itself prove that a plan is fixed or changeable.

Emphasis	Form	Example
Decision / offer now	will + base verb	I will call the pilot station now.
Prediction / expectation	will + base verb	Visibility will improve, according to the forecast.
Existing intention	am/is/are going to + base verb	We are going to check the deck, as agreed.
Prediction from evidence	am/is/are going to + base verb	Those dark clouds suggest it is going to rain.
Arranged future event	am/is/are + verb-ing + future time	The inspector is arriving at 1000 tomorrow.
Timetable	present simple	The briefing starts at 0900 tomorrow.

Check the whole message

The pilot will board at 0630 can be grammatical even when boarding is arranged. The pilot is boarding at 0630 emphasises the arrangement. Add clear words such as confirmed, planned or subject to weather when the status matters.

Form the negative and question

Will not + base verb: We will not enter yet. Will + subject + base verb: Will visibility improve? For going to: Are we going to secure the deck? Do not put -s or -ing directly after will.

Practice instructions specify the target

When an exercise asks for present continuous, use that form to show the arrangement. This is a transformation task, not a claim that another grammatical future form is an error. A forecast remains a prediction, not a completed observation.

Examples are for language learning. Sources: S1; S6.

CLASS NOTES

UNIT 4 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: The weather will deteriorates. Correct: The weather will deteriorate. Incorrect: We going to check the deck. Correct: We are going to check the deck.

Study the examples

1. The pilot is boarding at 0630 tomorrow; the booking is confirmed.

2. We are going to secure the deck before 1700.

3. I will send the revised ETA now.

4. High water is at 1440 according to this training tide table.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. Use going to: The weather _____ (deteriorate) tonight.

2. Use present continuous: The pilot _____ (board) at 0630 tomorrow.

3. Use will for a decision now: I _____ (reduce) speed now.

4. Use going to: We _____ (secure) the deck, as agreed.

5. Use timetable present simple: High water _____ (be) at 1440.

6. Use will: If the motion becomes bad, I _____ (report) to the Master.

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 4 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Use going to: We will inspect the lashings; this is our existing plan. -> We are going to inspect the lashings.

Activity B - rewrite as instructed

1. Rewrite using going to: We will secure the deck before dark; this is the existing plan.

2. Rewrite using will: We are going to reduce speed if conditions require it.

3. Rewrite using present continuous to emphasise the arrangement: The pilot will board at 0630.

4. Use will to state the forecast: Visibility is expected to fall after midnight.

5. Make a question: We are altering course at 0400.

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. The pilot is board at 0630 tomorrow.

2. The weather will deteriorates tonight.

3. We going to check the deck before dark.

4. Are the tug meeting us at 0500 tomorrow?

5. High water are at 1440 in this timetable.

CLASS NOTES

UNIT 4 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
inspector / arrive / tomorrow / arranged -> The inspector is arriving tomorrow.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. we / secure the deck / before dark / already decided

2. visibility / deteriorate / after midnight / prediction

3. the pilot / board / 0630 / arranged

4. high water / be / 1440 / timetable

5. I / alter course to starboard / if the motion becomes bad

Activity E - your turn

Write a short weather and intentions paragraph of eight sentences for tonight on your own vessel. Use at least two will forms,
two going to forms, one present continuous arrangement and one timetable present simple.

D SPEAKING PRACTICE

pairs, position and weather exchange

One of you holds a position and a forecast; the other has a blank chart sheet and a logbook page. Pass the information by voice only. Every digit must survive the journey.

STUDENT A - REPORTING OFFICER

You have a card with a position, a course and speed, and a forecast. Report them in the correct order, saying figures one digit at a time. Do not spell out anything unless asked.

STUDENT B - RECEIVING OFFICER

You have a blank logbook page. Write down everything you hear. Repeat back every figure. At the end, read the whole entry back and state one intention for the night using going to or will.

PHRASE BANK - USE AT LEAST FOUR OF THESE

- My position is latitude ... longitude ...
- Wind ... , force ... , increasing / decreasing.
- Say again your longitude.
- We are going to ...
- Heading ... , speed ... knots.
- Visibility ... miles.
- I read back: ...
- I will ... if ...

D HOW TO RUN THE TASK

follow the steps in order

1. Student A reports the position first, then course and speed, then the weather.
2. Student B writes and repeats back each figure before A continues.
3. B reads the complete entry back. A checks it against the card without showing it.
4. Count the errors. Any wrong digit counts as one error.
5. Swap roles with a new card and try to reduce the error count to zero.
6. Finish by each stating one intention for the night, one using will and one using going to.

ACTIVITY - AFTER YOU HAVE SPOKEN

1. How many digits were wrong in your partner's logbook entry? Where did each error happen?

2. Write your own position now, in two different ways.

3. Which figure type is hardest to hear correctly: a bearing, a time, or a draft? Say why.

NOTES

Use the supplied Visual Resource 4 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

E PRACTICAL ACTIVITY - PLOT THE REPORTED POSITION

group task

chartroom, simulator or classroom with plotting sheets, 45 minutes A position is only useful if the person receiving it can put a mark on a chart in the right place. This activity closes the loop between spoken English and the plotting sheet.

YOU WILL NEED

- One blank plotting sheet per student
- Parallel rules or a protractor and dividers
- A set of position cards prepared by the teacher
- A weather forecast extract

E PROCEDURE

work through in order

1. Your teacher reads six positions aloud, at normal radio speed, once only.
2. Write each one down as you hear it, then plot it on your sheet.
3. Compare plots with a partner. Where you differ, decide which digit was misheard.
4. Now work in pairs. Each of you plots a secret position and reports it by voice only.
5. The partner plots it and reads back the latitude and longitude.
6. Repeat using bearing and distance from a named mark instead of latitude and longitude.
7. Finally, read the forecast extract and write a three-sentence weather summary for the logbook.

E OBSERVATION CHECKLIST

for the teacher or a peer observer

The observer ticks one box per row while the group presents. Every row describes something that can be seen or heard, so two observers should agree.

Observable behaviour	Yes	Partly	Not yet
Says each digit separately rather than as a whole number.	☐	☐	☐
States north or south and east or west without prompting.	☐	☐	☐
Repeats back the full position before plotting.	☐	☐	☐
Uses the correct order: latitude before longitude.	☐	☐	☐
Describes wind with direction and force, not just strong or weak.	☐	☐	☐
Chooses will, going to or the present continuous correctly when stating intentions.	☐	☐	☐

ACTIVITY - WRITE IT UP

1. Write a three-sentence weather summary for the logbook from the forecast extract.

2. Which position did your pair plot most accurately, and which least? What made the difference?

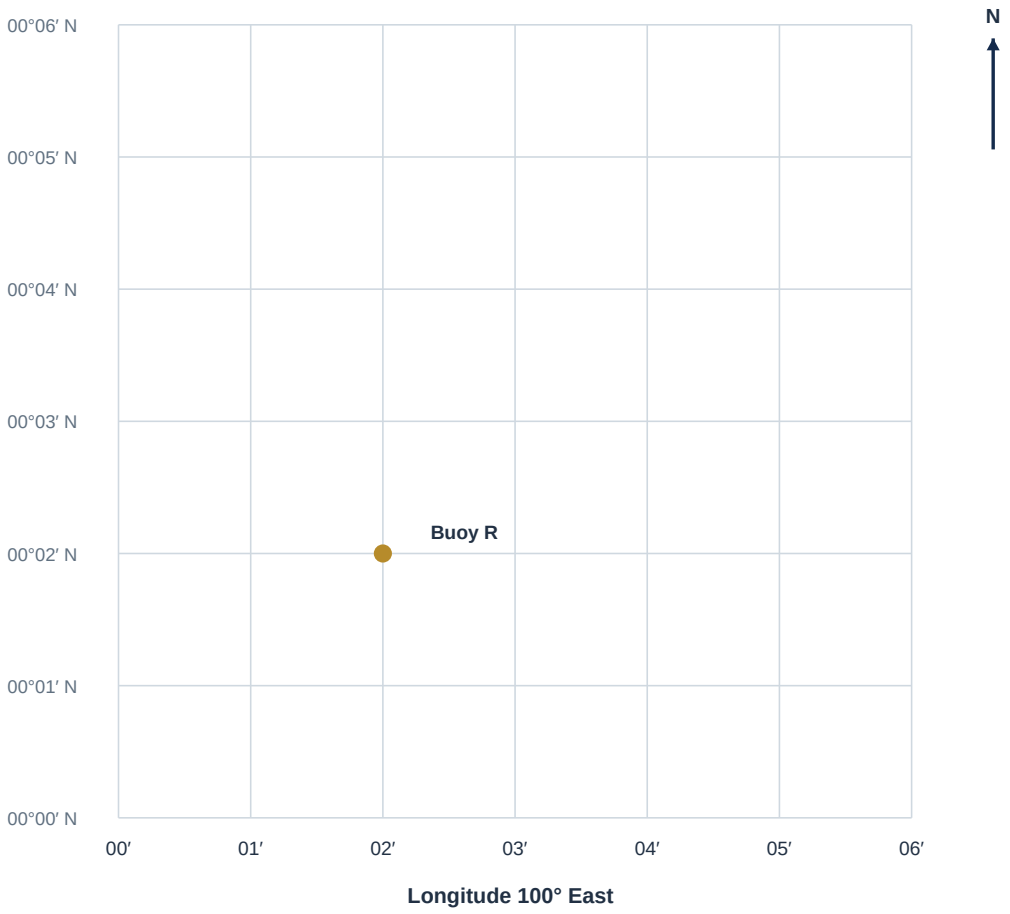

3. Write one rule about giving positions over the radio that you will follow from now on.

Use the supplied Visual Resource 4 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

UNIT 4 | VISUAL AND PRACTICAL RESOURCE

Plot the position you hear

Listen to each position twice. Write it in the recording table before plotting. Ask for a repeat when needed. Plot the six numbered positions. Do not connect them into an operational route.

LANGUAGE TRAINING ONLY - NOT FOR NAVIGATION. Simplified local scale: one grid interval = one nautical mile. Buoy R: 00°02′ N, 100°02′ E.

Position	Latitude received	Longitude received
1		
2		
3		
4		
5		
6		

UNIT 4 | VISUAL AND PRACTICAL RESOURCE

Position cards and a weather extract

Student A reads the six cards; Student B uses a blank V4a. Keep this page hidden during the first exchange. After checking, swap roles. All times below are local time.

Card	Latitude	Longitude
1	00°01′ N	100°01′ E
2	00°02′ N	100°05′ E
3	00°03′ N	100°03′ E
4	00°04′ N	100°02′ E
5	00°05′ N	100°04′ E
6	00°06′ N	100°06′ E

SECOND ROUND
Bearing exercise: relative to Buoy R, report Card 4 as 000 degrees, 2 nautical miles FROM Buoy R. Report the point 00°02′ N, 100°04′ E as 090 degrees, 2 nautical miles FROM Buoy R. State the reference object and direction of the bearing.

MV Cedar Bay, 18 September	Training weather / passage data
1200 observation	SW wind force 4; visibility 6 nautical miles.
Forecast 1600-2000	Visibility expected to decrease to 2 nautical miles in rain.
1200 passage plan	96 nautical miles remaining; 12 knots; no delay assumed.
1530 revised plan	54 nautical miles remaining; 9 knots for all remaining distance.
Reporting commitments	Deck inspection 1500; review 1530; engine readiness report 1545.

V4.1. Write a three-sentence summary: an observation, a forecast and the revised ETA.

CLASS NOTES

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET

complete without looking back

Part 1 - Match the term to its meaning.

1.	latitude		a. The distance to an object
2.	bearing		b. Distance north or south of the equator
3.	range		c. Water between the keel and the seabed
4.	force		d. A step on the Beaufort wind scale
5.	swell		e. The approved plan for the voyage
6.	visibility		f. The direction of one point from another
7.	under keel clearance		g. The greatest distance objects can be seen
8.	passage plan		h. Long waves from a distant weather system

Part 2 - Complete each sentence with one word.

1. My _____ is nine point six metres, so I require the deep-water channel.
2. Wind south-west, _____ seven, increasing after midnight.
3. Visibility is expected to _____ to two miles in rain squalls.
4. Report when you are _____ of the fairway buoy.
5. My _____ at the pilot station is zero six three zero hours.
6. I _____ alter course to starboard at 0400 if the motion becomes bad.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. Give the same position in two different ways, and say when you would use each.

2. Explain the difference between "I will reduce speed" and "I am going to reduce speed".

3. Why are figures spoken one digit at a time over the radio?

Part 4 - Write a short weather and intentions entry.

Using the forecast in the passage, write five to seven sentences for the deck logbook: the present weather, the expected change with its timing, and two actions the vessel will take. Use one will form, one going to form and one present continuous arrangement.

SELF-CHECK

- ☐ I can give my position in two different ways.
- ☐ I can say each digit separately so a figure cannot be misheard.
- ☐ I can describe wind force, sea state and visibility.
- ☐ I can state an intention using will or going to correctly.

NOTES

UNIT 4 SUMMATIVE TEST

Position, Weather and Passage

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. Distance north or south of the equator. _____
2. The direction of one point from another, in three figures. _____
3. The distance to another vessel or object. _____
4. A step on the Beaufort scale describing wind strength. _____
5. Long waves travelled from a distant weather system. _____
6. The greatest distance at which objects can be seen. _____
7. To become worse. _____
8. Estimated time of arrival. _____
9. The water remaining between the keel and the seabed. _____
10. The approved plan for the voyage, berth to berth. _____
11. Distance east or west of the prime meridian. _____
12. The mark showing the seaward entrance to a channel. _____
13. A description of the height and roughness of the waves. _____
14. The vertical distance from the waterline to the lowest point of the keel. _____

Word bank: bearing · draft · ETA · fairway buoy · force · latitude · longitude · passage plan · range · sea state · swell · to deteriorate · under keel clearance · visibility

B. GRAMMAR

one mark each **14 marks**

1. Use going to: The weather _____ (deteriorate) tonight.
2. Use present continuous: The pilot _____ (board) at 0630 tomorrow.
3. Very well, I _____ (reduce) speed to eight knots now.
4. We _____ (secure) the deck before dark, as ordered this morning.
5. High water _____ (be) at 1440 according to the tide table.
6. If the motion becomes bad, I _____ (alter) course to starboard.
7. The forecast says visibility _____ (fall) to two miles after midnight.
8. Correct the error: The pilot is board at 0630 tomorrow.

_____

9. Correct the error: High water are at 1440 in this table.

_____

10. Correct the error: We going to secure the deck this afternoon.

_____

11. Rewrite using going to: I will secure the deck; the Master decided this morning.

_____

12. Use present continuous to emphasise the arrangement: The pilot will board at 0630.

_____

13. Build a sentence: I / alter course to starboard / if the motion becomes bad

_____

14. Build a sentence: high water / be / 1440 / timetable

_____

C. READING

answer in full sentences **14 marks**

At noon the vessel's position was latitude 09 degrees 18 minutes north, longitude 098 degrees 44 minutes east. She had run 288.0 miles in the previous twenty-four hours on a heading of 145 degrees at 12.0 knots, and was 96 miles from the pilot station. The wind was north-east force 4, expected to increase to force 6 during the night. Visibility was eight miles, but was forecast to fall to three miles in rain after 0300. The barometer read 1008.6 and was falling. On present speed the estimated time of arrival at the pilot station was 2000 that day. The Master decided the deck would be secured before dark, and the officer of the watch confirmed the under keel clearance at the fairway buoy would be 2.1 metres at the planned time of arrival.

1. State the vessel's noon position and the distance run in the previous 24 hours.

2. What is the wind doing, and when is the change expected?

3. What is the visibility now, what will it become, and after what time?

4. What is the ETA at the pilot station, and on what assumption does it depend?

5. What forecast change indicates stronger wind, and when is it expected?

6. What did the Master decide about the deck, and what completion deadline was given?

7. What is the under keel clearance expected to be at the fairway buoy, and at what time?

D. WRITING — 12 marks

Write a short weather and intentions entry of six to eight sentences for tonight. State the present weather, the expected change with its timing, and two actions the vessel will take. Use one will form, one going to form and one present continuous arrangement.

E. SPEAKING — *assessed by the teacher* — 8 marks

Report a position, a course and speed, and a forecast to your teacher, who will write them down and read them back.

Criterion	2	1	0
Says each digit separately rather than as a whole number	☐	☐	☐
States north or south and east or west without prompting	☐	☐	☐
Gives wind direction and force, not just strong or weak	☐	☐	☐
Chooses will, going to or present continuous correctly	☐	☐	☐

UNIT 5

VHF Radio Procedure

Calling a station correctly, holding a readable exchange on a poor channel, and closing a call so that both parties hold the same information.

MODEL COURSE 3.17 LINKAGE

Core Section 1 and Core Section 2 - VHF exchange procedure, readability, message markers.
STCW Table A-II/1 and A-IV/2: use the IMO SMCP and use English in oral form on radio.

O LEARNING OBJECTIVES

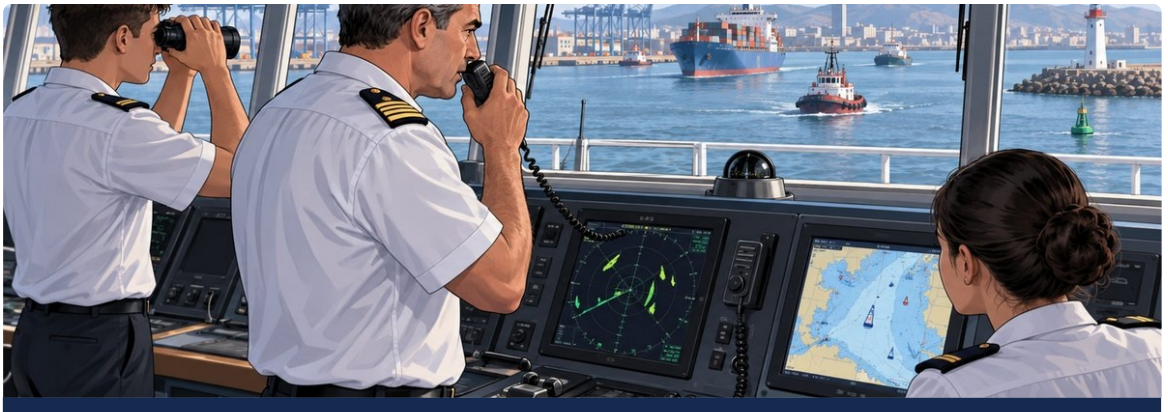

tagged with cognitive level

1	Open a VHF call using the correct calling format and channel change.	APPLY	DECK + ENGINE
2	Report readability and request a repetition using standard procedure words.	APPLY	DECK + ENGINE
3	Select the correct message marker for an instruction, a question or information.	ANALYSE	DECK
4	Spell a vessel name and give figures so they cannot be misheard.	APPLY	DECK + ENGINE

C CAN-DO CHECKLIST

tick when you can do it unaided

- [ ] I can call a station using its name twice and my own name and call sign.
- [ ] I can say OVER and OUT at the right moments.
- [ ] I can report readability on a scale of one to five.
- [ ] I can spell any word using the phonetic alphabet.

Bridge communication: an officer uses VHF radio in port approach.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

call sign *n.*
The unique letter-and-figure identifier of a vessel.
e.g. *This is motor vessel ANDAMAN TRADER, call sign HSAX4.*

working channel *n.*
A VHF channel used for conversation after the initial call.
e.g. *Switch to VHF Channel one two.*

readability *n.*
How clearly a transmission is understood, reported one to five.
e.g. *I read you readability three.*

OVER *phr.*
My message is finished; I expect a reply.
e.g. *My ETA is 0630 hours. Over.*

OUT *phr.*
The exchange is finished; no reply is expected.
e.g. *Nothing more. Port Control out.*

SAY AGAIN *phr.*
Repeat your message, or the part named.
e.g. *Say again your position. Over.*

READ BACK *phr.*
Repeat my message to me exactly as received.
e.g. *Read back the anchorage position.*

STAND BY *phr.*
Wait; I will call you again shortly.
e.g. *Stand by on Channel one two.*

CORRECTION *phr.*
An error was made; the correct version follows.
e.g. *My draft is nine point four. Correction, nine point six metres.*

I SPELL *phr.*
The next word will be spelled letter by letter.
e.g. *My name is TRADER. I spell: Tango Romeo Alfa Delta Echo Romeo.*

message marker *n.*
A word said before a message to show its function.
e.g. *INSTRUCTION. Reduce speed to six knots.*

phonetic alphabet *n.*
The standard letter names used to spell over radio.
e.g. *Alfa, Bravo, Charlie, Delta.*

VTS *abbr.*
Vessel Traffic Service; a shore station managing traffic in an area.
e.g. *Call VTS one hour before entering the area.*

to acknowledge *v.*
To confirm that a message has been received.
e.g. *Acknowledge receipt of the navigational warning.*

loud and clear
adj. phr. Received at good strength and fully understandable.
e.g. *I read you loud and clear.*

traffic *n.*
The messages passing on a radio channel.
e.g. *Keep Channel one six clear for distress traffic.*

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Which three terms are procedure words rather than equipment?

2. Which word do you say at the very end of an exchange, and which at the end of a turn?

3. Spell your own family name using the phonetic alphabet:

NOTES

UNIT 5 | B READING AND LISTENING

Calling Port Control

The situation
A fictional port approach. The signal is unclear at first. Channel allocation is given for this classroom exchange, not as a current local port instruction.

OOW Port Control, Port Control. This is motor vessel ANDAMAN TRADER, call sign Hotel Sierra Alfa X-ray Four. Over.

PORT CONTROL Station calling Port Control, your signal is weak. Say again your vessel name, please. Over.

OOW ANDAMAN TRADER. I spell: Alfa November Delta Alfa Mike Alfa November, new word, Tango Romeo Alfa Delta Echo Romeo. Over.

PORT CONTROL ANDAMAN TRADER. Readability four. INSTRUCTION. Switch to VHF Channel one two. Over.

OOW I will switch to VHF Channel one two. Over.

OOW Port Control, ANDAMAN TRADER on Channel one two. How do you read me? Over.

PORT CONTROL I read you readability five. QUESTION. What are your position, draft and ETA at the pilot boarding ground? Over.

OOW My position is bearing one two five degrees, distance one two nautical miles from Entrance Buoy. My draft is nine decimal six metres. My ETA is zero six three zero local time. Over.

PORT CONTROL Say again your draft. Over.

OOW My draft is nine decimal six metres. Over.

PORT CONTROL Draft nine decimal six metres. INFORMATION. The pilot will board at zero six three zero. INSTRUCTION. Prepare the agreed port-side boarding arrangement; the pilot boat requests the ladder one decimal five metres above the water. WARNING. A deep-draft tanker is outbound in the fairway. Over.

OOW Pilot zero six three zero; port-side ladder one decimal five metres above water; outbound tanker in the fairway. Understood. Over.

PORT CONTROL Correct. Stand by on Channel one two. Port Control out.

Original classroom dialogue adapted from the supplied manuscript. Operational data are fictional; this is not a complete operating procedure.

SMCP language reference: S2. Actual pilot transfer arrangements must follow applicable requirements and the agreed safe boarding plan.

CLASS NOTES

UNIT 5 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. Why did Port Control ask the vessel to say again her name the first time?

2. What readability did Port Control report before and after the channel change?

3. Which message markers appear in the transmission about pilot boarding and the fairway?

4. What three pieces of information does the OOW give in the ANSWER turn?

5. Why does Port Control say OUT rather than OVER at the very end? B

Language in context

1. Find “I spell”. What name is spelled and why?

2. "new word" — find this phrase. Why is it needed when spelling this vessel name?

3. Which figure is requested again? What could happen if a listener guessed an unclear figure?

4. "Stand by on Channel one two" — find this. What must the vessel do now?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “When a Radio Message Is Not Clear”. Compare the information you hear with the information a reader can verify.

CLASS NOTES

B2 READING A WRITTEN DOCUMENT - VHF COMMUNICATION LOG

the same situation, on paper

Radio traffic is logged as well as spoken. Read the log of the call you have just heard, and notice what the officer chose to write down and what he left out.

RADIO LOG - VHF TRAFFIC

MV ANDAMAN TRADER · CALL SIGN HSAX4 · DATE 4 MARCH

0512 Ch 16	Called Laem Chabang Port Control. Signal weak, name requested again. Spelled in
FULL.	
0514 Ch 16	Instructed to switch to Ch 12. Acknowledged.
0515 Ch 12	Radio check. Readability 5.
0516 Ch 12 Reported position 125 deg, 12 M from Entrance Buoy. Draft 9.6 m. ETA pilot 0630.	
0517 Ch 12 Draft repeated at request of Port Control. Confirmed correct.	
0518 Ch 12	Received: pilot 0630; ladder port side 1.5 m; keep starboard side of fairway.
0518 Ch 12	Reason given: deep draft tanker outbound. Instructions read back and confirmed.
0519 Ch 12	Instructed to stand by Ch 12. Port Control out.

WATCH OFFICER'S NOTE

NOTE SIGNAL WAS POOR. FOLLOW EQUIPMENT INSTRUCTIONS AND APPLICABLE RADIO RULES; RECORD THE REPAIR AND CONFIRMED FIGURES.

ACTIVITY - WORKING WITH THE DOCUMENT

1. Find three items in the log that were spoken in the dialogue, and one that was not.
2. The log records that the draft was read back. Why is that worth writing down?
3. Rewrite the 0516 entry as it would have been spoken on the radio, in full.
4. Write the note a watch officer might add after a call in which nothing went wrong.

NOTES

UNIT 5 | B3 READING FOR MEANING

When a Radio Message Is Not Clear

Before you read
What could go wrong if a listener guesses a draft or arrival time?

Reading focus: Recognise a communication problem and follow its repair.

A A clear voice does not always produce a clear message. Background noise can hide a digit, and a familiar word can lead a listener to guess the rest. A useful response identifies the part that was not understood. Guessing a vessel's draft or arrival time does not solve the problem.

B In a classroom exchange, MV Sea Lantern calls Harbour Control. The vessel reports a draft of 8.4 metres. A noise hides the decimal part, so the shore operator asks for the draft again. The officer repeats 8.4 metres slowly. Harbour Control reads the figure back, and the officer confirms it. Only then does the operator enter the figure in the record.

C Later, the officer gives an ETA of 1740 LT, then notices an error in the notes. The officer says CORRECTION and gives 1750 LT. Harbour Control confirms the corrected time. The current ETA field shows 1750; the communication log also records that the earlier figure was corrected. The original error must not silently become the current value.

D Message markers can help show whether a message gives information, asks a question or requests action. They are not compulsory before every sentence. Standard procedure words help manage the exchange: OVER expects a reply, while OUT closes the exchange. A short request such as Say again, please is acceptable. The aim is a shared understanding of the message, not unnecessary words or an artificial ban on politeness.

Word support

distorted: changed so it is hard to hear clearly | **clarification**: extra information that makes meaning clear | **acknowledgement**: a response showing receipt

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S2; see Sources and editorial notes.

CLASS NOTES

UNIT 5 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. What is the main message of the article?

2. What draft does the vessel report?

3. What causes the draft to be repeated?

4. What is the corrected ETA?

5. What does clarification mean?

6. What does it refer to in “the officer confirms it”?

7. Put the draft exchange in order: confirmation; request again; report; read-back; repeat.

8. Why should 1740 not remain in the current ETA field?

9. Write a request asking only for the draft to be repeated.

10. Write a one-line communication log entry for the ETA change without inventing a transmission time.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 5 | C GRAMMAR - FORMS AND MEANING

Imperatives and requests

An imperative gives a direct instruction. A question with may or could can make a request. On the radio, the function, operational context and speaker's responsibility matter as well as grammar. Keep the message short without changing its intended meaning.

Function	Form	Example
Instruction	base verb + object	Switch to VHF Channel one two.
Prohibition	Do not + base verb	Do not enter the fairway.
Request for permission	May I + base verb ...?	May I enter the fairway?
Statement of need	I require / I request ...	I require a pilot.
Advice	ADVICE + recommendation	ADVICE. Advise you contact Port Control.
Warning	WARNING + stated danger	WARNING. A vessel is approaching the entrance.

Message markers help identify purpose

The eight SMCP markers are INSTRUCTION, ADVICE, WARNING, INFORMATION, QUESTION, ANSWER, REQUEST and INTENTION. The SMCP says they may be used. Do not add one mechanically to every transmission.

Polite does not mean long

Say again, please is an accepted communication-repair form. Please is not banned. Avoid long, indirect wording that makes an instruction difficult to recognise. A request does not create authority or permission by itself.

Confirm what was understood

For important information, confirm the exact figure or ask for it again. An acknowledgement, a read-back and a report of completed action are different. OVER invites a reply; OUT ends an exchange when no reply is expected.

Examples are for language learning. Sources: S1; S2.

CLASS NOTES

UNIT 5 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: Do not to enter. Correct: Do not enter. Incorrect: I request to entering. Correct: I request to enter / I request permission to enter.

Study the examples

1. REQUEST. I require tug assistance.

2. INSTRUCTION. Do not anchor in the cable area.

3. Say again your position, please. Over.

4. My draft is nine decimal six metres. Over.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. Give an instruction: _____ (reduce) speed to six knots.

2. Use May: _____ I enter the fairway now?

3. Complete the standard advice form: _____ you contact Port Control.

4. Use require: I _____ a pilot and two tugs.

5. Complete a prohibition: _____ _____ anchor in the cable area.

6. Use Shall for an offer: _____ I call the pilot station?

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 5 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Request permission: Leave the berth. -> May I leave the berth?

Activity B - rewrite as instructed

1. Rewrite as a request from a vessel: Open the fairway for me.

2. Rewrite as an order from Port Control: Could you possibly reduce your speed?

3. Rewrite as advice: Keep to the starboard side of the channel.

4. Rewrite as a negative order: You should not anchor in the cable area.

5. Rewrite as a formal statement of need: I want a pilot and two tugs.

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. May I enters the fairway now?

2. Do not to overtake in the channel.

3. I require one pilots and two tugs.

4. Please do not to anchor in the cable area.

5. I request permission to entering the port.

CLASS NOTES

UNIT 5 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
vessel / request / a pilot -> I request a pilot.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. Port Control / instruct / vessel / reduce speed / six knots

2. vessel / request / permission / enter the fairway

3. Port Control / advise / vessel / keep starboard side

4. vessel / require / one pilot / two tugs

5. Port Control / warn / vessel / deep draft tanker outbound

Activity E - your turn

Write ten short radio transmissions: four orders from a shore station, three requests from a vessel, two pieces of advice and one
warning. Mark each one with the correct message marker and end each with OVER.

D SPEAKING PRACTICE

pairs in separate rooms or back to back

You cannot see your partner and you cannot lip-read. This is the condition of every real VHF exchange. Complete a full call from first contact to OUT, with one figure that must be read back correctly.

STUDENT A - CALLING VESSEL

You are approaching port. Your card gives your vessel name, call sign, position, draft and ETA. Open the call correctly, change channel when told, and answer the questions asked. Spell your vessel name when requested.

STUDENT B - PORT CONTROL

Ask the vessel to say again her name the first time. Order a channel change. Ask for position, draft and ETA. Require a read back of one figure. Close the call with instructions, advice and OUT.

PHRASE BANK - USE AT LEAST FOUR OF THESE

- ... Port Control, this is motor vessel ...
- I read you readability ...
- I spell: ...
- Read back your ...
- How do you read me? Over.
- Say again your ...
- INSTRUCTION. Switch to VHF Channel ...
- Stand by on Channel ... Out.

D HOW TO RUN THE TASK

follow the steps in order

1. Sit back to back or work from separate rooms. No hand signals.
2. Student A opens the call. Name twice, own name, call sign, then OVER.
3. Student B reports poor readability and asks for the name again. A must spell it.
4. B orders a channel change. Both say the channel aloud before continuing.
5. B asks three questions. A answers with markers ANSWER and INFORMATION.
6. B requires a read back of one figure, then closes with OUT.
7. Swap roles. The second pair scores you on whether OVER and OUT were used correctly.

ACTIVITY - AFTER YOU HAVE SPOKEN

1. Did your partner use OVER when expecting a reply and OUT when closing the exchange?

2. Write the one word you spelled least confidently, and spell it again here.

3. Which repair procedure did you use most: say again, I spell, or read back?

NOTES

Use the supplied Visual Resource 5 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

E PRACTICAL ACTIVITY - DEGRADED CHANNEL EXERCISE

two rooms, or one room with a noise source, 45 minutes

Real VHF is rarely clear. This exercise deliberately degrades the channel so that the repair procedures, say again, I spell and read back, become automatic rather than optional.

YOU WILL NEED

- Two rooms or a partition, plus a source of background noise
- Message cards containing vessel names, call signs and figures
- A scoring sheet per pair
- A copy of the phonetic alphabet for reference in round one only

E PROCEDURE

work through in order

1. Round one: normal conditions. Pass five messages. Score one point per exact figure received.
2. Round two: add background noise. Pass five new messages. Repair procedures are now required.
3. Round three: remove the phonetic alphabet sheet. Spell from memory.
4. Round four: the sender deliberately makes one error and says CORRECTION. The receiver must record only the corrected value.
5. Score each round. Compare the error rate between rounds one and three.
6. Discuss as a class: which repair procedure saved the most messages?

E OBSERVATION CHECKLIST

for the teacher or a peer observer

The observer ticks one box per row while the group presents. Every row describes something that can be seen or heard, so two observers should agree.

Observable behaviour	Yes	Partly	Not yet
Opens with the station name twice and own name and call sign.	☐	☐	☐
Uses OVER when a reply is expected and OUT to end the exchange.			
Reports readability on the scale of one to five when asked.	☐	☐	☐
Uses say again rather than repeat or what.	☐	☐	☐
Spells accurately from memory using the phonetic alphabet.	☐	☐	☐
Records only the corrected figure after CORRECTION.	☐	☐	☐

ACTIVITY - WRITE IT UP

1. Write your error count for each of the four rounds, and explain the pattern.

2. Which repair procedure saved the most messages in round two?

3. Write the full opening of a call you would make tomorrow, from memory.

Use the supplied Visual Resource 5 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

UNIT 5 | VISUAL AND PRACTICAL RESOURCE

A radio trainer and the repair sequence

The illustration is a generic, non-transmitting classroom trainer. Locate the display, speaker, microphone and push-to-talk control. Real controls and channel rules vary by equipment and administration.

Problem	Useful response
Part of the message was unclear	Say again your [position / draft / ETA], please.
A name is hard to identify	I spell: [phonetic alphabet].
You gave an incorrect figure	Correction. [Correct figure with unit].
A critical figure needs confirmation	Read back [the specified information].

Phonetic alphabet reference

A Alfa	J Juliett	S Sierra
B Bravo	K Kilo	T Tango
C Charlie	L Lima	U Uniform
D Delta	M Mike	V Victor
E Echo	N November	W Whiskey
F Foxtrot	O Oscar	X X-ray
G Golf	P Papa	Y Yankee
H Hotel	Q Quebec	Z Zulu
I India	R Romeo	

Source: S2. Message markers may clarify function; they are not compulsory before every sentence. OVER expects a reply; OUT closes the exchange.

UNIT 5 | VISUAL AND PRACTICAL RESOURCE

Four rounds of message cards

Use cards 1-5 in Round 1 and the next five in each later round. The sender gives the name, call sign, draft and ETA. The receiver records the four fields on separate paper, then confirms them. Use new cards each round.

HOW TO RUN
Round 1: clear speech, alphabet available. Round 2: a partner briefly speaks over one field; the receiver requests it again. Round 3: alphabet covered, but clarification still allowed. Round 4: deliberately give the ETA five minutes early, then say CORRECTION and give the printed time. Score the corrected time only. Do not use excessive noise or live radios.

Card	Vessel name	Call sign	Draft	ETA LT
1	ALDER	HSAK0	6.1 m	1300
2	BIRCH	HSBK1	7.3 m	1310
3	CEDAR	HSCK2	8.5 m	1320
4	ELM	HSDK3	9.7 m	1330
5	FIR	HSEK4	6.9 m	1340
6	MAPLE	HSFK5	7.1 m	1350
7	PINE	HSGK6	8.3 m	1400
8	WILLOW	HSHK7	9.5 m	1410
9	ASH	HSIK8	6.7 m	1420
10	LARCH	HSJK9	7.9 m	1430
11	OAK	HSKK0	8.1 m	1440
12	BEECH	HSLK1	9.3 m	1450
13	HOLLY	HSMK2	6.5 m	1500
14	ASPEN	HSNK3	7.7 m	1510
15	ROWAN	HSOK4	8.9 m	1520
16	YARROW	HSPK5	9.1 m	1530
17	JUNIPER	HSQK6	6.3 m	1540
18	LAUREL	HSRK7	7.5 m	1550
19	HAZEL	HSSK8	8.7 m	1600
20	HEATHER	HSTK9	9.9 m	1610

Scoring: one point for each correctly received field; maximum 20 per round. In Round 4 record the earlier figure as superseded in the log, not in the current ETA field.

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET

complete without looking back

Part 1 - Match the term to its meaning.

1.	OVER	☐ a.	Repeat my message to me exactly
2.	OUT	☐ b.	My turn is finished; reply expected
3.	SAY AGAIN	☐ c.	How clearly a transmission is understood
4.	READ BACK	☐ d.	The exchange is finished; no reply expected
5.	I SPELL	☐ e.	The unique identifier of a vessel
6.	readability	☐ f.	Repeat your message or part of it
7.	working channel	☐ g.	The next word is given letter by letter
8.	call sign	☐ h.	The channel used after the initial call

Part 2 - Complete each sentence with one word.

1. Laem Chabang Port Control, this is motor vessel ANDAMAN TRADER, _____ sign HSAX4.

2. Your signal is weak. _____ again your vessel name.

3. I read you _____ and clear, readability five.

4. INSTRUCTION. _____ to VHF Channel one two.

5. My name is TRADER. I _____: Tango Romeo Alfa Delta Echo Romeo.

6. Stand by on Channel one two. Port Control _____.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. Why is the station being called named twice at the start of a call?

2. Explain the difference between OVER and OUT, and give one example of each.

3. A vessel wants the VTS to allow her into the fairway. Why must she not use a bare imperative?

Part 4 - Write a complete VHF exchange.

Write an exchange of at least eight turns between your vessel and a port authority. Include one channel change, one request for a repetition, one spelled word, one read back of a figure, and a correct closing. Mark every turn with OVER or OUT.

SELF-CHECK

- ☐ I can call a station using its name twice and my own name and call sign.
- ☐ I can say OVER and OUT at the right moments.
- ☐ I can report readability on a scale of one to five.
- ☐ I can spell any word using the phonetic alphabet.

NOTES

UNIT 5 SUMMATIVE TEST

VHF Radio Procedure

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. My turn is finished; a reply is expected. _____
2. The exchange is finished; no reply is expected. _____
3. Repeat your message, or the part named. _____
4. Repeat my message to me exactly as received. _____
5. The next word will be given letter by letter. _____
6. How clearly a transmission is understood, one to five. _____
7. The channel used for conversation after the initial call. _____
8. The unique letter-and-figure identifier of a vessel. _____
9. Wait; I will call you again shortly. _____
10. An error was made; the right version follows. _____
11. A word said before a message to show its function. _____
12. Vessel Traffic Service; a shore station managing traffic in an area. _____
13. To confirm that a message has been received. _____
14. The standard letter names used to spell over radio. _____

Word bank: call sign · CORRECTION · I SPELL · message marker · OUT · OVER · phonetic alphabet · readability · READ BACK · SAY AGAIN · STAND BY · to acknowledge · VTS · working channel

B. GRAMMAR

one mark each **14 marks**

1. Port Control to vessel: _____ (reduce) speed to six knots in the fairway.
2. Vessel to Port Control: _____ I enter the fairway now?
3. Port Control to vessel: _____ you keep to the starboard side.
4. Vessel to Port Control: I _____ a pilot and two tugs.
5. Port Control to vessel: _____ _____ anchor within the cable area.
6. Vessel to Port Control: _____ I reduce speed, or continue as before?
7. Use monitor: _____ the outbound vessel and report its position.
8. Rewrite using May I: Vessel requests permission to enter now.

_____

9. Rewrite as a direct instruction: Reduce speed to six knots.

_____

10. Rewrite using I require: Vessel needs a pilot.

_____

11. Rewrite as a request from a vessel: Open the fairway for me.

_____

12. Rewrite as advice: You must keep to the starboard side of the channel.

_____

13. Build a sentence: vessel / request / permission / enter the fairway

_____

14. Build a sentence: Port Control / warn / vessel / deep draft tanker outbound

_____

C. READING

answer in full sentences **14 marks**

At 0512 the Officer of the Watch called Port Control on Channel 16. The signal was weak and Port Control asked for the vessel's name again, which the officer spelled in full. Port Control then instructed the vessel to switch to Channel 12. On the working channel the readability was five. The officer reported his position as bearing 125 degrees, 12 miles from the fairway buoy, his draft as 9.6 metres, and his estimated time of arrival at the pilot boarding ground as 0630. Port Control required the draft to be read back, then gave the pilot time, the side for the ladder and a warning about an outbound tanker, and closed with OUT. The whole exchange was logged by the watch officer immediately afterwards, with the confirmed figures and the communication-repair actions.

1. Why did Port Control ask for the vessel's name a second time?

2. What readability was reported after the change of channel?

3. What three pieces of information did the officer report?

4. Which figure was requested again, and why should an unclear figure not be guessed?

5. Why did Port Control end with OUT rather than OVER?

6. What warning did Port Control give, and what was the reason for it?

7. What did the watch officer do immediately after the exchange, according to the passage?

D. WRITING — 12 marks

Write a complete VHF exchange of at least eight turns between your vessel and a port authority. Include one channel change, one request for a repetition, one spelled word, one read back of a figure, and a correct closing. Mark every turn with OVER or OUT.

E. SPEAKING — *assessed by the teacher* — 8 marks

Make a full VHF call to your teacher, who will act as Port Control. You will be asked to spell your vessel's name and read back one figure.

Criterion	2	1	0
Opens with the station name twice and own name and call sign	☐	☐	☐
Uses OVER and OUT correctly	☐	☐	☐
Spells accurately using the phonetic alphabet	☐	☐	☐
Reads back the figure exactly when required	☐	☐	☐

UNIT 6

Distress, Urgency and Safety

The three signals, the message skeleton that never changes, and the discipline of giving the right information in the right order under pressure.

MODEL COURSE 3.17 LINKAGE

Core Section 1 and 2 - distress, urgency and safety communications; emergency commands.
STCW Table A-II/1, A-III/1 and A-IV/2: transmit and receive distress, urgency and safety traffic.

O LEARNING OBJECTIVES

tagged with cognitive level

1	Distinguish the three radio signals and state when each is used.	UNDERSTAND	DECK + ENGINE
2	Transmit a complete distress message in the correct order.	APPLY	DECK + ENGINE
3	Receive and record a distress message, extracting position and persons on board.	APPLY	DECK + ENGINE
4	Judge whether a given situation requires MAYDAY, PAN-PAN or SÉCURITÉ.	EVALUATE	DECK + ENGINE

C CAN-DO CHECKLIST

tick when you can do it unaided

- [ ] I can say which of the three signals a situation requires, and why.
- [ ] I can transmit a distress message without missing an element.
- [ ] I can write down a distress message received from another vessel.
- [ ] I can state the number of persons on board without being asked.

Muster drill: crew members listen to emergency and safety instructions.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

MAYDAY *phr.*
The distress signal, said three times, for grave and imminent danger.
e.g. *MAYDAY, MAYDAY, MAYDAY. This is motor vessel ANDAMAN TRADER.*

PAN-PAN *phr.*
The urgency signal, said three times, below distress level.
e.g. *PAN-PAN, PAN-PAN, PAN-PAN. All stations.*

SÉCURITÉ *phr.*
The safety signal, said three times, for navigational warnings.
e.g. *SÉCURITÉ. A drifting container is reported in position ...*

persons on board *n. phr.*
The total number of people aboard, always stated in distress.
e.g. *I have twenty-one persons on board.*

to abandon ship *v. phr.*
To leave the vessel because she is no longer safe.
e.g. *Prepare to abandon ship.*

general alarm *n.*
The alarm calling the whole crew to emergency stations.
e.g. *Sound the general alarm and muster all crew.*

muster list *n.*
The document showing each person's emergency duty and station.
e.g. *Read the muster list on your cabin door.*

fire party *n.*
The team trained and equipped to fight fire on board.
e.g. Fire party, report to the designated control point.

flooding *n.*
The uncontrolled entry of water into a compartment.
e.g. *Flooding in the engine room, below the floor plates.*

to muster *v.*
To assemble at an appointed station.
e.g. *All crew mustered within three minutes.*

casualty *n.*
An injured or sick person.
e.g. *I have one casualty with a suspected fracture.*

to require assistance *v. phr.*
To ask formally for help.
e.g. *I am on fire and I require immediate assistance.*

EPIRB *abbr.*
An emergency beacon that sends a distress alert; position depends on the system.
e.g. *The EPIRB has been activated.*

survival craft *n.*
A lifeboat or liferaft used to abandon ship.
e.g. *Prepare survival craft for launching.*

under control
adj. phr. Contained, and no longer spreading.
e.g. *The fire is not under control.*

to relay *v.*
To pass a distress message on for a vessel that cannot transmit.
e.g. *MAYDAY RELAY. All ships in the area of ...*

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Which of the three signals has absolute priority, and what does that mean for other traffic?

2. Which two terms would appear only in a fire emergency?

3. Write the number of persons on board a vessel you know, in a full sentence:

UNIT 6 | B READING AND LISTENING

Fire in the Engine Room

The situation
At 0212 LT a fire is reported on the fuel-oil purifier. This is a closed classroom communication case. The transcript does not authorise entry, CO2 release or any real firefighting action.

SECOND ENGINEER Bridge, engine control room. Fire at the fuel-oil purifier. The purifier has been stopped and the fuel supply isolated under the emergency procedure. The engine-room team has withdrawn.

MASTER Sound the general alarm. Confirm the headcount and report to the emergency command team.

SECOND ENGINEER At 0216, all twenty-one persons are accounted for. No injury has been reported. The fire is not under control.

MASTER MAYDAY, MAYDAY, MAYDAY. This is motor vessel ANDAMAN TRADER, ANDAMAN TRADER, ANDAMAN TRADER. Call sign Hotel Sierra Alfa X-ray Four. MAYDAY. ANDAMAN TRADER. My position is one one degrees four zero minutes North, one zero zero degrees one two minutes East. I am on fire in the engine room. The fire is not under control. I require immediate assistance. I have two one persons on board. Over.

COAST RADIO ANDAMAN TRADER, this is Coast Radio. Received MAYDAY. Say again your position. Over.

MASTER My position is one one degrees four zero minutes North, one zero zero degrees one two minutes East. Over.

COAST RADIO Position received. Assistance is being arranged. Are you abandoning ship? Over.

MASTER Negative. We are not abandoning ship at present. I will report again in one five minutes, or sooner if the situation changes. Over.

COAST RADIO Understood. Maintain a listening watch. Distress traffic has priority; other stations must observe the controlling station's instructions.

SECOND ENGINEER Boundary temperatures are being monitored from the designated positions. Entry is not authorised. The response team is following the ship's emergency procedure.

MASTER Keep personnel clear. Report any change immediately.

Original classroom dialogue adapted from the supplied manuscript. Operational data are fictional; this is not a complete operating procedure.

The distress call is made at 0217 LT. Relevant language: S2. The Master and authorised emergency team follow the vessel-specific response plan.

CLASS NOTES

UNIT 6 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. What immediate equipment status does the engineer report?

2. How many people are accounted for, and what does that confirm?

3. Identify the vessel, position, emergency, assistance requested and persons on board in the distress message.

4. What information does the receiving station ask to hear again?

5. When will the Master give another update?

Language in context

1. "accounted for" — find this phrase. What exactly does it confirm?

2. "is not under control" — find this. Why is this stated in a distress message?

3. What does the instruction to maintain radio silence protect during distress traffic?

4. Find “not authorised”. What further decision is still required before entry?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “Choosing the Right Emergency Message”. Compare the information you hear with the information a reader can verify.

CLASS NOTES

UNIT 6 | B2 SHIPBOARD DOCUMENT

Master's report - engine-room fire

REPORT	MR-24-03 | MV ANDAMAN TRADER
Summary	Fire reported at 0212 LT on 4 March; extinguished by 0334. No injuries reported. Subsequent movement requires the Master's assessment and applicable permissions.
0212	Purifier stopped; fuel isolation reported; team withdrawn.
0214	General alarm sounded.
0216	All 21 persons accounted for.
0217	MAYDAY transmitted; coast station acknowledged.
0221	Emergency team reported ventilation and boundary controls in place under the vessel procedure. Entry not authorised at this stage.
0334	Fire reported extinguished. Boundary monitoring/cooling continued.
0434	A further 60 minutes of monitoring completed; no renewed temperature rise reported.
0435	Master advised coast station of changed status; distress traffic ended under the responsible station's direction.
Findings recorded later	Oil contamination near a purifier flange; source and ignition sequence under investigation.
Cause status	No final root cause established by this initial report.
Follow-up	Chief Engineer to review inspection records and manufacturer requirements; report findings by 20 March.

Work with the document

1. Identify three facts also stated in the distress exchange.

2. Explain the difference between a recorded finding and a confirmed cause.

3. Why is “no injuries reported” included in the summary?

4. Write five chronology entries for a fictional emergency, keeping unknown times labelled as unknown.

Fictional chronology, not a rule requiring exactly one hour before ending distress traffic.

UNIT 6 | B3 READING FOR MEANING

Choosing the Right Emergency Message

Before you read
Does the name of an equipment fault alone tell you how serious a situation is?

Reading focus: Read the stated danger before choosing a signal.

A The signal at the start of a message tells listeners its priority. MAYDAY concerns grave and imminent danger requiring immediate assistance. PAN-PAN introduces an urgent safety message below that level. SECURITE introduces safety information, such as a navigational or weather warning. The facts of the situation matter more than a single word such as failure.

B Consider three invented training cards. Card A describes uncontrolled flooding. The vessel is losing stability and the Master requires immediate assistance. There are 18 persons on board. The card gives the position as 12 degrees 20 minutes North, 100 degrees 10 minutes East at 0900 UTC. The transmitter must give these facts clearly rather than spending the first turn explaining a possible cause.

C Card B describes a propulsion failure in open water, clear of traffic and danger. The Master states that the vessel and people are not in grave or imminent danger, but urgent assistance is needed. Card C describes an unlit drifting object near a shipping route. The reporting vessel is safe and is warning others. These facts lead to different signals even though all three cards concern safety.

D The receiver records the identity, position, problem and requested assistance relevant to the message. Missing or unclear information is requested, not invented. If the danger changes, the responsible officer reassesses the communication priority. In class, students use disconnected equipment or a closed simulator. No practice distress message is transmitted on an operational radio channel. The exercise teaches language, not a complete emergency or GMDSS procedure.

Word support

imminent: about to happen | **urgency**: a need for prompt attention | **available**: ready or able to be used

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S2; see Sources and editorial notes.

CLASS NOTES

UNIT 6 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. What should determine the choice of signal?

2. How many persons are on Card A's vessel?

3. At what time is Card A's position valid?

4. What is the hazard in Card C?

5. What does imminent mean?

6. Which situations does “all three cards” refer to?

7. Match Cards A, B and C to the three signals.

8. Which facts in Card B explain why it is below distress level?

9. Write Card A's position with hemispheres and the position time.

10. Write one sentence requesting information that is unclear in an emergency message.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 6 | C GRAMMAR - FORMS AND MEANING

Imperatives and passive emergency reports

Use a clear imperative for an instruction and an accurate statement for a report. The passive puts the action or affected object first. It does not remove the need to identify a responsible person when that information matters.

Meaning	Form	Example
Instruction	base verb	Sound the general alarm.
Prohibition	Do not + base verb	Do not enter the space.
Present status	is/are + past participle	All personnel are accounted for.
Completed past action	was/were + past participle	The alarm was sounded at 0214.
Completed action relevant now	has/have been + past participle	The beacon has been activated.
Negative status report	Negative + clear statement	Negative. We are not abandoning ship.

Change active to passive

The officer sounded the alarm at 0214. -> The alarm was sounded at 0214. Keep the time. Add by the officer when the actor matters. Use were for a plural subject: The valves were closed.

Report the stage accurately

The area has been checked does not mean entry is authorised. Prepared does not mean released, and under control does not mean extinguished. State only the status confirmed by the responsible person.

Different signals, different purposes

MAYDAY concerns grave and imminent danger requiring immediate assistance. PAN-PAN gives urgency priority below distress; SECURITE introduces safety information. The message content depends on the situation. This grammar lesson is not a complete GMDSS or firefighting procedure.

Examples are for language learning. Sources: S1; S2.

CLASS NOTES

UNIT 6 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: All personnel is accounted for. Correct: All personnel are accounted for. Incorrect: The beacon has been activate. Correct: The beacon has been activated.

Study the examples

1. The general alarm was sounded at 0214.

2. All twenty-one persons are accounted for.

3. The space has not been cleared for entry.

4. The Master reported the change to the coast station.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. Give an order: _____ (sound) the general alarm.

2. Use past passive: All personnel _____ (account for) at 0216.

3. Use past passive: The valves _____ (close) after the alarm.

4. Complete the prohibition: _____ _____ enter the space.

5. Use present perfect passive: The beacon _____ (activate).

6. Give an instruction: _____ (prepare) the record for the next report.

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 6 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Use past passive: The officer checked the alarm. -> The alarm was checked by the officer.

Activity B - rewrite as instructed

1. Rewrite as an order: You should sound the general alarm.

2. Rewrite in the passive: Somebody closed the quick closing valves at 0212.

3. Rewrite as a prohibition: It is not permitted to release the CO2 yet.

4. Rewrite in the passive: We have activated the EPIRB.

5. Rewrite as a negative report: We are abandoning ship.

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. Sounding the general alarm. (Rewrite as a direct instruction.)

2. All personnel is accounted for at 0216.

3. The valves was closed by the Second Engineer at 0212.

4. Do not releasing the CO2 until the Master orders it.

5. The EPIRB has been activate and is transmitting now.

CLASS NOTES

UNIT 6 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
the alarm / sound / 0214 / past passive -> The alarm was sounded at 0214.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. sound / the general alarm / and / muster all crew

2. all engine room personnel / account for / 0216

3. the quick closing valves / close / 0212

4. not / release / the CO2 / until the Master orders

5. the area / cordon off / and / all work / stop

Activity E - your turn

Write a chronology of eight timed entries for an emergency of your choice. Use the passive in at least four entries, and give an
order in the imperative in at least two.

UNIT 6 | D SPEAKING PRACTICE - THREE ROLES

Transmit, receive and check a distress message

Resources and safety
Use Visual Resources 6a-6b and a CLOSED classroom simulation. Never send a practice distress message over a live radio. Practise for accuracy first; timing is secondary.

Student A - transmitting vessel

Use Card A in Visual Resource 6a. State the distress signal, vessel identity/call sign, position and time, nature of distress, required assistance and persons on board. End with OVER. Do not add invented injuries or actions.

Student B - receiving station

Complete the receiving form in Resource 6b. Ask for one unclear element again; confirm the critical information. Do not invent a rescue vessel or an ETA. Say that assistance is being arranged only as part of the supplied classroom role.

Student C - observer

Check the six information groups, figure accuracy, intelligibility and repair. Record omissions without interrupting unless the teacher stops the practice.

Run the task

1. Read only your role and supplied facts. 2. Allow one minute to prepare. 3. A transmits and B records. 4. B requests clarification; A repeats the requested element. 5. C gives feedback using the checklist. 6. Rotate until everyone has transmitted and received. Repeat at a clearer pace before adding time pressure.

Language support
My position is ... | I require ... | I have ... persons on board. | Say again your ... | I read back ... | The cause is not confirmed.

1. Which information group was omitted or unclear?

2. Write the correct identity, position and persons on board from Card A.

3. Explain why the other cards require different priority signals.

CLASS NOTES

UNIT 6 | E PRACTICAL LANGUAGE TASK

Muster and report - classroom simulation

Resources and boundaries
Use paper name cards, the Resource 6 signal cards and receiving form. Do not sound a real emergency alarm, launch equipment, simulate fire or transmit on a live channel. Real drills require the institution's authorised plan.

Procedure

1. Work in six: leader, reporter, two name-card holders, timekeeper and observer. Use the supplied fictional scenario.

2. On the teacher's classroom signal, count the named cards. Compare the list with the supplied persons-on-board total; report any mismatch instead of guessing.

3. The leader gives three clear classroom instructions, such as “Check the name list” and “Record the time”.

4. The reporter selects the signal from the facts and drafts the message. Include only the information appropriate to the card.

5. Read the message to the teacher. The teacher requests one clarification. The reporter responds and the receiver confirms.

6. Discuss accuracy before speed. Rotate roles and repeat with a different card.

Observer check	Yes / partly / not yet
Chooses the signal from the stated urgency	
Reports headcount without inventing missing persons	
Gives position and time with hemispheres / time standard	
Uses a clear instruction and a factual report	
Requests and answers clarification accurately	
Keeps the exercise within classroom boundaries	

1. Write one improvement to make the next message clearer without removing essential information.

UNIT 6 | VISUAL AND PRACTICAL RESOURCE

Three signals: three different purposes

Read the facts before deciding the message priority. A failure name alone is not enough. These are language-training cases, not a full GMDSS or emergency-response procedure.

Signal	Purpose	Training case
MAYDAY	Grave and imminent danger requiring immediate assistance.	A: uncontrolled flooding; losing stability; immediate help required.
PAN-PAN	Urgent safety communication below distress level.	B: propulsion failure; clear open water; no grave or imminent danger stated; urgent assistance needed.
SECURITE	Navigational or meteorological safety information.	C: safe vessel reports an unlit drifting object near a shipping route.

Distress message: information to preserve

Field	Training Card A
Identity	MV BLUE HORIZON / call sign HSBH2
Position and time	12°20′ N, 100°10′ E / 0900 UTC
Nature of danger	Uncontrolled flooding; vessel losing stability.
Assistance required	Immediate assistance.
Persons on board	18
Further relevant information	No additional information supplied; do not invent it.

V6.1. Choose the signal for A, B and C and justify one choice with a fact.

Source: S2, General 5 and Appendix to Part A1. Actual calling, DSC, acknowledgement, relay and traffic-termination procedures require the applicable radio training.

CLASS NOTES

UNIT 6 | VISUAL AND PRACTICAL RESOURCE

Receive, record and check

Work in threes: transmitter, receiving station and observer. Use V6a and the role cards in Section D. Keep sender information hidden from the receiver. Use disconnected equipment only.

Received-message field	Record exactly what you hear
Vessel name / call sign	
Signal / nature of problem	
Latitude / longitude / time	
Assistance required	
Persons on board	
Unclear detail to request again	
Confirmed correction	

Observer check

Check	Yes / partly / not yet
Correct priority from the supplied facts	
Identity and full position retained	
Assistance and persons on board stated	
Unclear information requested, not guessed	
No claim that help is on the way unless the card says so	

Classroom group headcount and fictional persons-on-board count are different. For Card A, the shipboard count is 18 regardless of group size.

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET *complete without looking back*

Part 1 - Match the term to its meaning.

1.	MAYDAY	☐	a. A navigational or weather safety warning
2.	PAN-PAN	☐	b. Grave and imminent danger
3.	SÉCURITÉ	☐	c. An emergency beacon sending a distress alert
4.	persons on board	☐	d. An urgent message below distress level
5.	muster list	☐	e. Contained and no longer spreading
6.	under control	☐	f. The total number of people aboard
7.	EPIRB	☐	g. A distress message passed on for another vessel
8.	MAYDAY RELAY	☐	h. The document showing each person's emergency duty

Part 2 - Complete each sentence with one word.

1. MAYDAY, MAYDAY, MAYDAY. _____ is motor vessel ANDAMAN TRADER.
2. The fire is not _____ control. I require immediate assistance.
3. I have two one _____ on board.
4. Sound the general _____ and muster the fire party.
5. All engine room personnel are _____ for.
6. Do not _____ the CO2 until the Master orders it.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. List the six elements of a distress message in the correct order.

2. A container has been sighted floating in a busy shipping lane. Which signal is correct, and why not the other two?

3. Why must the number of persons on board be stated even if nobody asks for it?

Part 4 - Write a full distress message.

Choose a fictional fire, flooding, grounding or person-overboard case with grave and imminent danger requiring immediate assistance. Write a complete MAYDAY message containing all six elements in the correct order, then write the coast radio station's reply, including one request for a repetition.

SELF-CHECK

- ☐ I can say which of the three signals a situation requires, and why.
- ☐ I can transmit a distress message without missing an element.
- ☐ I can write down a distress message received from another vessel.
- ☐ I can state the number of persons on board without being asked.

NOTES

UNIT 6 SUMMATIVE TEST

Distress, Urgency and Safety

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. The distress signal, said three times. _____
2. The urgency signal, below distress level. _____
3. The safety signal, for navigational warnings. _____
4. The total number of people aboard the vessel. _____
5. The alarm calling the whole crew to emergency stations. _____
6. The document showing each person's emergency duty. _____
7. Contained, and no longer spreading. _____
8. To leave the vessel because she is no longer safe. _____
9. An emergency beacon that sends a distress alert; position depends on the system. _____
10. An injured or sick person. _____
11. The team trained and equipped to fight fire on board. _____
12. A lifeboat or liferaft used to abandon ship. _____
13. To ask formally for help. _____
14. To pass a distress message on for a vessel that cannot transmit. _____

Word bank: casualty · EPIRB · fire party · general alarm · MAYDAY · muster list · PAN-PAN · persons on board · SÉCURITÉ · survival craft · to abandon ship · to relay · to require assistance · under control

B. GRAMMAR

one mark each **14 marks**

1. _____ (sound) the general alarm and muster all crew.
2. All engine room personnel _____ (account for) at 0216.
3. The quick closing valves _____ (close) immediately after the alarm.
4. _____ _____ (not release) the CO2 until the Master orders it.
5. The EPIRB _____ (activate); it is transmitting now.
6. The fire party _____ (boundary cool) the bulkhead at this moment.
7. The personnel _____ (account for) at 0216. Use past passive.
8. Correct the error: All personnel is accounted for at 0216.

_____

9. Correct the error: The valves was closed by the Second Engineer.

_____

10. Correct the error: The EPIRB has been activate and is transmitting.

_____

11. Rewrite in the passive: Somebody cordoned off the area at 1437.

_____

12. Rewrite as a prohibition: It is not permitted to enter the space yet.

_____

13. Build a sentence: the area / cordon off / and / all work / stop

_____

14. Build a sentence: sound / the general alarm / and / muster all crew

_____

UNIT 6 | T SUMMATIVE ASSESSMENT | READING 14 MARKS

Unit 6 test - reading

At 0212 LT a fire was reported at the fuel-oil purifier on MV Coral Star. The Second Engineer reported that the purifier had been stopped, the fuel supply isolated under the emergency procedure and the team withdrawn. The general alarm sounded at 0214. All twenty-one persons were accounted for by 0216. The Master transmitted a MAYDAY at 0217, and the coast station acknowledged it. Entry into the engine room was not authorised at that stage. The response team followed the vessel's emergency plan. The fire was reported extinguished at 0334. Boundary monitoring and cooling continued until 0434, with no renewed temperature rise reported. At 0435 the Master advised the coast station of the changed status, and distress traffic ended under the responsible station's direction. The cause remained under investigation.

Comprehension - 14 marks

Answer all seven questions. Each question carries two marks. Give both details or the answer and reason requested.

1. Name two actions reported by the Second Engineer before the headcount. [2 marks]

2. At what time was the headcount confirmed, and how many persons were accounted for? [2 marks]

3. When was MAYDAY transmitted, and which station acknowledged it? [2 marks]

4. Was entry authorised at that stage, and what plan controlled the response? [2 marks]

5. When was the fire reported out, and how long did the later monitoring period last? [2 marks]

6. When did the Master report the changed status, and who directed the end of distress traffic? [2 marks]

7. Was the cause confirmed? Give evidence from the passage. [2 marks]

D. WRITING — 12 marks

Use a fictional fire, flooding, grounding or person-overboard case involving grave and imminent danger requiring immediate assistance. Write a complete MAYDAY message containing all six elements in the correct order, then write the coast radio station's reply including one request for a repetition.

E. SPEAKING — *assessed by the teacher* — 8 marks

Transmit a full distress message from an emergency card within sixty seconds. Your teacher will act as the coast radio station.

Criterion	2	1	0
Gives all six elements in the correct order	☐	☐	☐
States the position in full with north or south and east or west	☐	☐	☐
States the number of persons on board unprompted	☐	☐	☐
Completes the transmission within the time limit	☐	☐	☐

UNIT 7

Mooring, Anchoring and Port Operations

The orders worked on a forecastle and a mooring deck, the reports that come back, and the port arrival sequence from pilot to all fast.

MODEL COURSE 3.17 LINKAGE

Core Section 1 and 2 - anchoring, mooring, berthing and unberthing; port procedures.
STCW Table A-II/1: understand and give orders for mooring and anchoring operations.

O LEARNING OBJECTIVES

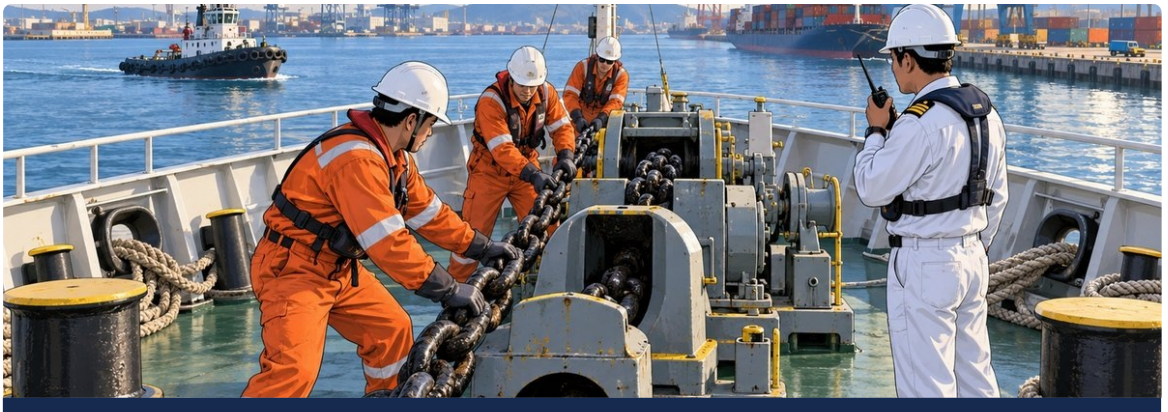

tagged with cognitive level

1	Give and understand standard mooring and anchoring orders.	APPLY	DECK
2	Report the state of a line or a cable accurately to the bridge.	APPLY	DECK
3	Sequence a port arrival from pilot boarding to all fast.	ANALYSE	DECK + ENGINE
4	Warn a working party of a specific hazard using appropriate language.	APPLY	DECK + ENGINE

C CAN-DO CHECKLIST

tick when you can do it unaided

- [ ] I can name the main mooring lines and say what each one does.
- [ ] I can give an order to heave, slack or hold a line.
- [ ] I can report how the anchor cable is leading.
- [ ] I can warn someone of a danger clearly and in time.

Anchoring equipment on the forecastle: the windlass and anchor cable.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

head line *n.*
A mooring line running forward from the bow to the quay.
e.g. *Send the head line ashore first.*

stern line *n.*
A mooring line running aft from the stern.
e.g. *Two stern lines and two springs are fast.*

spring *n.*
A line led at an angle to stop the ship moving fore and aft.
e.g. *Slack away the spring and hold the head line.*

heaving line *n.*
A light line thrown ashore first to pull the mooring rope across.
e.g. *Have the heaving lines ready fore and aft.*

to heave *v.*
To pull in a rope or cable under power.
e.g. *Heave in the spring.*

to slack away *v. phr.*
To let out a rope so that tension is reduced.
e.g. *Slack away the head line.*

to hold on *v. phr.*
To stop paying out and keep the tension.
e.g. *Hold on the stern line.*

all fast
adj. phr. The report that every mooring line is secured ashore.
e.g. *Forward station is all fast.*

to single up *v. phr.*
To reduce the moorings to the minimum before letting go.
e.g. *Single up to one head line and one spring.*

windlass *n.*
The machine used to raise and lower the anchor.
e.g. *Stand by the windlass on the forecastle.*

shackle *n.*
A length of anchor cable, 27.5 metres.
e.g. *Pay out to five shackles in the water.*

to lead *v.*
Of a cable, to run in a stated direction from the hawse pipe.
e.g. *The cable is leading ahead and is slack.*

bollard *n.*
A shore or deck fitting to which a mooring line is secured.
e.g. *Put the eye over the bollard and report.*

bight *n.*
A loop of rope; do not stand in it during line handling.
e.g. Do not stand in the bight of the rope.

under strain
adj. phr. Carrying a high load.
e.g. *Warning: the spring is under heavy strain.*

bow thruster *n.*
A propeller in the bow used to move the ship sideways.
e.g. *The bow thruster is available and tested.*

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Which three terms are orders that a mooring party would hear?

2. Which two terms describe a danger rather than an action?

3. Write one order and the report that should follow it:

NOTES

B READING AND LISTENING

read aloud in role, then answer

THE SITUATION

MV Andaman Trader is approaching her berth. The pilot has the con with the Master present. The Chief Officer is forward, the Second Officer aft, and the Chief Engineer is standing by below.

Arrival and All Fast

Recording script - approx. 3 minutes

PILOT
Master, I have the con. Dead slow ahead. Two tugs are made fast, one on the bow, one on the quarter.

MASTER
Dead slow ahead, understood. Bow thruster is available and tested.

PILOT
Good. Forward station, stand by your heaving lines. We berth port side alongside, berth fourteen.

CHIEF OFFICER
Forward station standing by, heaving lines ready. Port side alongside, berth fourteen. Understood.

PILOT
Stop engine. Bow thruster to port, slow. Forward station, send your first head line ashore.

CHIEF OFFICER
First head line is ashore. Linesmen are taking it to the bollard. Warning: there is a strong onshore wind pressing us on.

PILOT
Understood. Heave in the head line slowly. Aft station, send two stern lines and one spring.

SECOND OFFICER
Two stern lines and one spring going ashore now. Warning: keep clear of the bight; the deck is wet.

PILOT
Forward, hold on the head line. Slack away the forward spring; it is under heavy strain.

CHIEF OFFICER
Hold on the head line; slack away the forward spring. Understood. We are slacking away now; strain is reducing.

PILOT
Very well. Aft station, heave in your springs and make fast. Forward, two more head lines and one spring.

SECOND OFFICER
Aft station is all fast. Two stern lines, two springs, stoppers on.

CHIEF OFFICER
Forward station is all fast. Three head lines, two springs.

PILOT
All fast fore and aft. Master, you have the con. Finished with engine and thruster when ready.

MASTER
I have the con. Bridge to engine room: finished with engine, time one zero four two.

NOTES

UNIT 7 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. How many tugs are made fast, and where is each one?

2. Which side does the vessel berth, and at which berth number?

3. What hazard does the Chief Officer report, and what effect does it have?

4. What does the pilot order when the forward spring comes under heavy strain, and why?

5. State the final report from each station, and the time finished with engine. B

Language in context

1. "I have the con" — find this twice. Who has it at each point, and who retains command throughout?

2. "hold on" / "slack away" — find both orders. What is the opposite of each?

3. Find the instruction about the bight. Why should this be a clear safety prohibition rather than optional advice?

4. "all fast" — find this three times. What exactly does it confirm?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “Clear Orders on the Mooring Deck”. Compare the information you hear with the information a reader can verify.

CLASS NOTES

UNIT 7 | B2 SHIPBOARD DOCUMENT

Statement of facts - check the draft order

This is a deliberately unordered classroom draft. Put the entries into chronological order. The laytime entry describes the agreement in this fictional case; it is not a general rule about every charter party.

Time LT	MV ANDAMAN TRADER | Berth 14
0548	End of sea passage; engines prepared for manoeuvring.
0612	Pilot boarded on the port side.
0640	Two tugs made fast: one forward, one at the quarter.
0718	First head line ashore.
0742	Aft station all fast: two stern lines, two springs.
0806	Forward station all fast: three head lines, two springs.
1042	Finished with engine.
0830	Clearances reported; gangway down and manned.
0900	Notice of Readiness tendered.
1015	Notice accepted. Laytime start recorded at 1015 under the agreement supplied for this exercise.
Remarks	Onshore wind force 5-6; forward spring under heavy strain. Slackening ordered by the pilot and completed. No damage reported. Master, agent and terminal representative signed the record.

1. Which entry is out of chronological position? Rewrite the final four times in order.

2. What start of laytime is recorded in this case, and what does the note say about applying it elsewhere?

3. Identify one event in the remarks that also appears in the dialogue.

4. Add two clearly labelled fictional entries: cargo started and cargo completed.

CLASS NOTES

UNIT 7 | B3 READING FOR MEANING

Clear Orders on the Mooring Deck

Before you read
Does “I understand” tell the bridge that a line is already fast?

Reading focus: Separate acknowledgement, action in progress and completion.

A Mooring communication needs a named line and a clear action. A message about that rope is difficult to follow when several lines are moving. The bridge and the station leader must also distinguish an order from a warning and a report. Each type of message has a different purpose.

B In this tabletop exercise, the bridge orders the forward station to slack away the forward spring. The station leader first confirms the named action. When the simulated action starts, the leader reports that the team is slacking away the forward spring. After the action, the leader reports the condition of the line. An acknowledgement, a progress report and a completion report are not interchangeable.

C A second card introduces a person standing inside a bight. The station leader warns of the danger and gives a clear instruction to move clear. This is not optional advice. Personnel should never stand in a bight of rope. A painted area on a deck cannot prove that all other areas are safe: the whole mooring deck can present danger when lines may come under tension.

D Anchoring uses some related verbs but different equipment. A report that the cable is leading ahead describes its direction from the hawse pipe; it does not by itself prove that the anchor is holding. Students use the separate anchor diagram to practise that distinction. All movements in this lesson use paper counters, not loaded ropes, live winches or operational radios. The ship's procedures govern real operations.

Word support

acknowledge: show that a message was received | **completion**: the point when an action is finished | **bight**: a loop or curved part of a rope

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S2, S4; see Sources and editorial notes.

CLASS NOTES

UNIT 7 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. What makes a mooring message easier to follow?

2. Which line must the forward station slack away?

3. What does the leader report when the action starts?

4. Where is the person in the second card standing?

5. What does completion mean?

6. What does its refer to in “describes its direction”?

7. Put these messages in order: completion; acknowledgement; progress.

8. Why is “move clear of the bight” not optional advice in this case?

9. Write a warning and an instruction for the person in Card 2.

10. Write one anchor-cable observation without claiming that the anchor is holding.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 7 | C GRAMMAR - FORMS AND MEANING

Orders, warnings and status reports

Name the station, line or equipment so the receiver knows what the message concerns. Keep an acknowledgement separate from action in progress and completion. Do not claim that an action has started before it actually has.

Function	Form	Example
Order	base verb + named line	Slack away the forward spring.
Acknowledgement	confirm the received instruction	Slack away the forward spring. Understood.
Action in progress	am/is/are + verb-ing	We are slacking away the forward spring.
Completed state	clear status statement	Forward station is all fast.
Warning	WARNING + hazard	WARNING. The forward spring is under heavy strain.
Safety prohibition	Do not + base verb	Do not stand in the bight.

There is no universal -ing repeat-back rule

Standard wheel orders are repeated in the same words. Other exchanges require the correct acknowledgement for their context. A progress report uses -ing only when the action is in progress; a completion report comes after verification.

Do not weaken a safety instruction

Keeping clear of a bight is not optional advice. State the prohibition or danger clearly. Treat the whole working mooring deck as a potential danger area; being outside a painted zone does not guarantee safety.

One clear communication route, with urgent warnings allowed

Normally use the agreed station-to-bridge communication arrangement. Any person who sees immediate danger must be able to raise the alarm or warning under the vessel's procedures. Do not wait to report a hazard merely because you are not the station leader.

Examples are for language learning. Sources: S1; S2.

CLASS NOTES

UNIT 7 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: Two stern line is fast. Correct: Two stern lines are fast. Do not say “All fast” while lines are still being secured.

Study the examples

1. Hold on the head line.

2. WARNING. The line is under heavy strain.

3. We are heaving in the after spring.

4. Aft station is all fast: two stern lines and two springs.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. Give the order: _____ (heave) in the head line slowly.

2. Name a danger: _____. The spring is under heavy strain.

3. Forward station _____ (be) all fast.

4. Complete the prohibition: _____ _____ stand in the bight.

5. Report action now: We _____ (slack) away the spring.

6. Report completion: Both stations _____ all fast.

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 7 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Report completion: We are securing the breast lines. -> The breast lines are secure.

Activity B - rewrite as instructed

1. Rewrite as an order: You need to heave in the head line.

2. Rewrite as a warning: The spring is under heavy strain.

3. Rewrite as a clear prohibition: It is unsafe to stand in the bight.

4. Use present continuous to report an action already in progress: I will slack away the forward spring.

5. Write a completed report: We are making the stern lines fast.

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. Heaves in the head line. (Write a direct order.)

2. The forward spring are under heavy strain.

3. Forward station is all fast with three head line and two spring.

4. We is slacking away the spring now.

5. Advice: you may choose whether to keep clear of the bight. (Replace with a clear safety prohibition.)

CLASS NOTES

UNIT 7 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
stern lines / be / secure -> The stern lines are secure.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. heave in / the head line / slowly

2. warning / the forward spring / under heavy strain

3. instruction / not / stand / in the bight of the rope

4. forward station / all fast / three head lines / two springs

5. not / let go / until / I tell you

Activity E - your turn

Write a berthing sequence of twelve lines. Include six orders, two warnings, one piece of advice and three reports. Mark each
line O, W, A or R so a reader can see the function.

UNIT 7 | D SPEAKING PRACTICE

A berthing exchange with clear status reports

Resources and roles
Use Visual Resources 7a-7b. Four students: bridge coordinator, forward station, aft station and observer. Use paper counters only. No loaded lines, machinery or live radio.

Shared situation

MV Training Star is approaching Berth 14, port side alongside. Two tugs are assisting. The first head line is ashore; the forward spring is under heavy strain. Aft has two stern lines and two springs to secure. Treat these as language role facts, not instructions for a real manoeuvre.

Run the exchange

1. Bridge names a station and gives one clear order about a specified line.

2. The station acknowledges the instruction accurately. It reports action in progress only when the paper-counter action has begun.

3. When the observer gives the strain card, the station states the danger and the bridge pauses the simulated sequence. Anyone may raise an immediate warning.

4. When the teacher supplies a completed-status card, the station reports the number and type of lines secured.

5. End with separate all-fast reports from forward and aft. Confirm the final time. Rotate roles.

Phrase bank
Slack away the forward spring. | Understood. | We are slacking away now. | WARNING. The line is under heavy strain. | Do not stand in the bight. | Forward station is all fast.

1. Write an acknowledgement and a different progress report for the same order.

2. What information is needed before the station can report “all fast”?

3. Why must anyone who sees immediate danger be able to warn the team?

CLASS NOTES

UNIT 7 | E PRACTICAL LANGUAGE TASK

Paper mooring plan and message check

Prepare
Materials: the labelled plan and message cards in Resources 7a-7b, paper counters, a pencil and this checklist. This task practises language, not rope handling.

1. Identify head, stern, breast and spring lines on the plan. Keep anchoring equipment separate from mooring lines.

2. Assign forward, aft, bridge and observer roles. Agree how to interrupt with an urgent warning.

3. The bridge gives a named-line instruction. The station acknowledges it; only then move the paper counter.

4. Use different messages for acknowledgement, action in progress and completion. Standard wheel orders, if used as a separate drill, are repeated in the same words.

5. Introduce the heavy-strain warning card. Pause the paper sequence and state the concern clearly. Do not describe keeping clear of bights as optional.

6. Complete the status record with line names and times. Rotate roles and repeat.

Observer check	Yes / partly / not yet
Names the station and specific line	
Acknowledges accurately before a paper action	
Distinguishes progress from completion	
States a clear warning or prohibition	
Does not invent a safe area or completed action	
Allows an urgent warning from any participant	

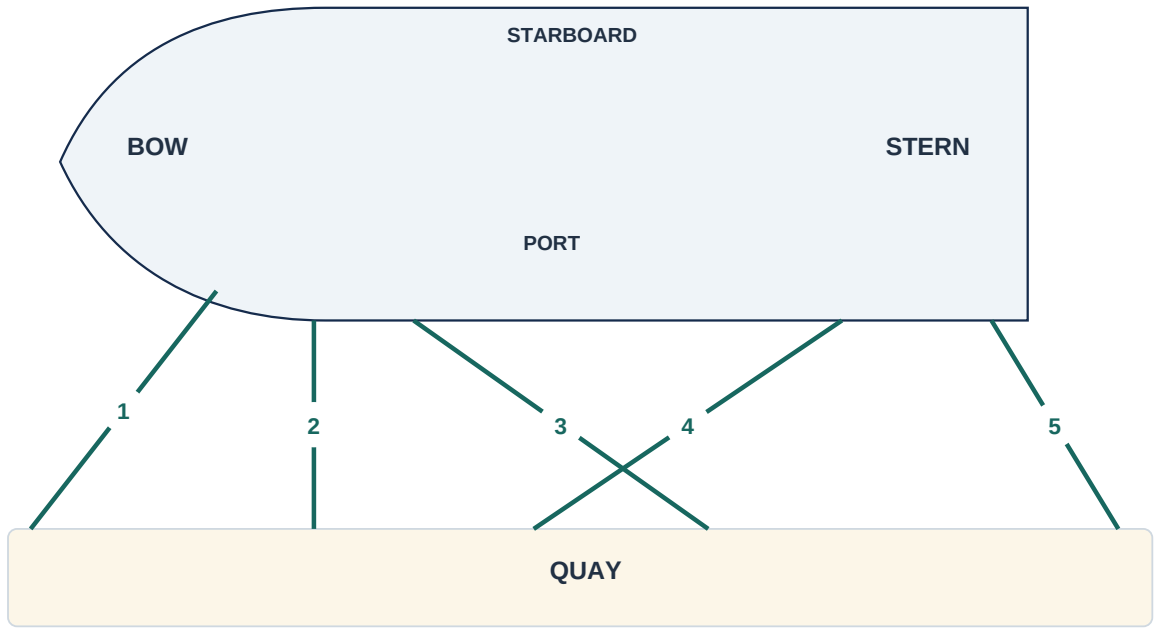

1. Write three messages: an order, a progress report and a completed report.

CLASS NOTES

UNIT 7 | VISUAL AND PRACTICAL RESOURCE

Name the line, then report its state

The simplified top view shows a vessel port side alongside. Match each number to the legend. The drawing explains line names; it is not a mooring design or a safe-standing-area plan.

Line	Name / main direction
1	Head line: leads forward from the bow.
2	Breast line: leads approximately across the vessel.
3	Forward spring: shown leading aft from a forward point.
4	Aft spring: shown leading forward from an aft point.
5	Stern line: leads aft from the stern.

SAFETY LANGUAGE
Never stand in a bight. Do not assume an unpainted area is safe. The whole mooring deck can be a danger area when lines may come under tension. Use paper counters for this lesson; no loaded lines.

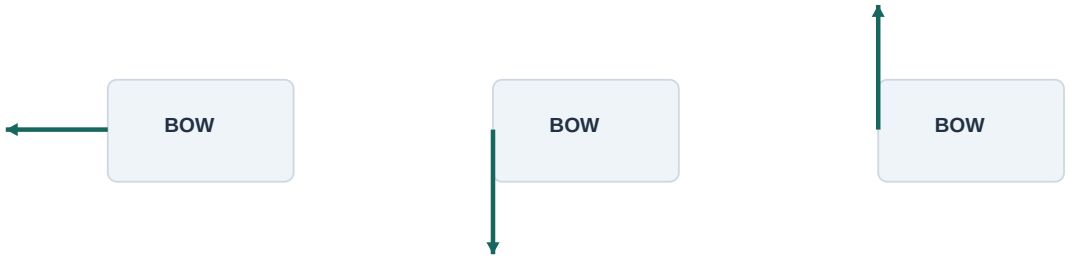

Sources: S1, S4. Line arrangements and terminology should be checked against the vessel's own plan.

UNIT 7 | VISUAL AND PRACTICAL RESOURCE

Orders, progress and anchor-cable direction

Stage	Example language
Order	Slack away the forward spring.
Acknowledgement	Slack away the forward spring. Understood.
Progress	We are slacking away the forward spring.
Completion / condition	The spring is slack.
Warning + instruction	Warning. You are in the bight. Move clear.

Anchor cable: describe only what the card shows

Leading ahead **Leading to port** **Leading to starboard**

View from above; bow faces left. These arrows show cable lead only. Direction alone does not establish that the anchor is holding.

V7.1. Name the line in diagram 3 on V7a and describe its direction.

V7.2. Write an acknowledgement, progress report and completion report for a head-line task.

TABLETOP ASSESSMENT
Observer: specific line named; message understood; uncertain information queried; progress not claimed before action; completion not claimed before it is confirmed.

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET

complete without looking back

Part 1 - Match the term to its meaning.

1.	head line		a. A loop of rope, dangerous under load
2.	spring		b. Reduce moorings to the minimum before letting go
3.	heaving line		c. Runs forward from the bow to the quay
4.	all fast		d. A length of anchor cable, 27.5 metres
5.	to single up		e. Every mooring line is secured ashore
6.	windlass		f. Stops the ship moving fore and aft
7.	bight		g. The machine that raises the anchor
8.	shackle		h. A light line thrown ashore first

Part 2 - Complete each sentence with one word.

1. Have the _____ lines ready fore and aft before we come alongside.

2. _____ away the forward spring; it is under heavy strain.

3. Forward station is _____ fast, three head lines and two springs.

4. Do not stand in the _____ of the rope.

5. Stand by the _____ on the forecastle for letting go the anchor.

6. _____ up to one head line and one spring before we let go.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. Explain the difference between an order, a warning and a report, giving one example of each.

2. How does an acknowledgement differ from a progress report and a completed report?

3. Describe the correct sequence of a port arrival, from pilot boarding to finished with engine.

Part 4 - Write a berthing sequence.

Write an exchange of at least ten turns between the bridge and two mooring stations, berthing a vessel starboard side alongside. Include six mooring orders with their repeat-backs, one warning, one piece of advice, and the final all fast reports.

SELF-CHECK

- [ ] I can name the main mooring lines and say what each one does.
- [ ] I can give an order to heave, slack or hold a line.
- [ ] I can report how the anchor cable is leading.
- [ ] I can warn someone of a danger clearly and in time.

NOTES

UNIT 7 SUMMATIVE TEST

Mooring, Anchoring and Port Operations

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. A mooring line running forward from the bow to the quay. _____
2. A line led at an angle to stop the ship moving fore and aft. _____
3. A light line thrown ashore first. _____
4. The report that every mooring line is secured ashore. _____
5. To reduce the moorings to the minimum before letting go. _____
6. The machine used to raise and lower the anchor. _____
7. A length of anchor cable, 27.5 metres. _____
8. A loop of rope, dangerous under load. _____
9. Carrying a high load. _____
10. A propeller in the bow used to move the ship sideways. _____
11. A mooring line running aft from the stern. _____
12. A shore or deck fitting to which a mooring line is secured. _____
13. Of a cable, to run in a stated direction from the hawse pipe. _____
14. To stop paying out and keep the tension. _____

Word bank: all fast · bight · bollard · bow thruster · head line · heaving line · shackle · spring · stern line · to hold on · to lead · to single up · under strain · windlass

B. GRAMMAR

one mark each **14 marks**

1. _____ (heave) in the head line slowly.
2. _____: the spring is under heavy strain.
3. Forward station _____ (be) all fast, three head lines and two springs.
4. _____ _____ (not stand) in the bight of the rope.
5. _____: keep clear of the mooring deck while the lines are under strain.
6. The cable _____ (lead) ahead and is slack at the moment.
7. Aft station _____ (heave) in the springs right now.
8. Write a direct order: Heave in the head line slowly.

_____

9. Correct the error: Forward station all fast with three head line and two spring.

_____

10. Use present continuous for action already in progress: We slack away the spring.

_____

11. Rewrite as a report in progress: I will slack away the forward spring.

_____

12. Rewrite as an order: You need to hold on the stern line.

_____

13. Build a sentence: not / let go / until / I tell you

_____

14. Build a sentence: warning / the forward spring / under heavy strain

_____

C. READING

answer in full sentences **14 marks**

MV Coral Star berthed starboard side alongside at berth nine. Two tugs were made fast, one on the bow and one on the quarter. The pilot ordered the forward station to stand by their heaving lines and to send the first head line ashore at 0718. A strong onshore wind was reported by the Chief Officer, who warned the bridge that it was pressing the vessel on. The forward spring came under heavy strain and was slacked away on the pilot's order. The aft station reported all fast at 0742 with two stern lines and two springs, and the forward station at 0806 with three head lines and two springs. The bow thruster was used twice during the final approach to hold the bow against the wind, and the engine was finished with at 1042.

1. How many tugs were made fast, and where was each one?

2. Which side did the vessel berth, and at which berth number?

3. What hazard was reported, and what effect did it have?

4. What order was given when the forward spring came under heavy strain, and why?

5. State the final report from each station and the time finished with engine.

6. How was the bow thruster used during the approach, according to the passage?

7. How many stern lines and springs did the aft station report, and at what time?

D. WRITING — 12 marks

Write a berthing sequence of at least ten turns between the bridge and two mooring stations, berthing a vessel port side alongside. Include six mooring orders with their repeat-backs, one warning, one piece of advice, and the final all fast reports.

E. SPEAKING — *assessed by the teacher* — 8 marks

Act as the forward mooring station. Your teacher will give mooring orders which you must repeat back and report on completion.

Criterion	2	1	0
Acknowledges the instruction before reporting action or completion	☐	☐	☐
Names the specific line rather than saying that rope	☐	☐	☐
Reports completion using all fast or an equivalent	☐	☐	☐
Uses Warning and Advice correctly and distinguishes them	☐	☐	☐

UNIT 8

Cargo Operations and Dangerous Goods

Agreeing a loading plan with a terminal, reporting quantities and rates, and handling the extra language that dangerous cargo demands.

MODEL COURSE 3.17 LINKAGE

Core Section 1 and 2 - cargo handling procedures, quantities, cargo damage, dangerous goods.
STCW Table A-II/1 and A-III/1: exchange cargo information and report damage in English.

O LEARNING OBJECTIVES

tagged with cognitive level

1	Report a quantity, a rate and a remaining figure with correct units.	APPLY	DECK + ENGINE
2	Use quantifiers correctly with countable and uncountable cargo nouns.	UNDERSTAND	DECK + ENGINE
3	Agree and confirm a loading sequence with a terminal representative.	APPLY	DECK
4	Judge whether a proposed stowage meets a stated segregation requirement.	EVALUATE	DECK

C CAN-DO CHECKLIST

tick when you can do it unaided

- [ ] I can say how much cargo has been loaded and how much remains.
- [ ] I can use much, many, less and fewer correctly with cargo nouns.
- [ ] I can stop an operation in English and say why.
- [ ] I can state a segregation requirement for dangerous goods.

CHECK THE UNIT. READ THE DOCUMENT. CONFIRM THE PLAN.

Cargo identification: use verified documents and the reference symbols in Resource 8.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

loading rate *n.*
How fast cargo is loaded, in tonnes or cubic metres per hour.
e.g. *The loading rate is eight hundred tonnes per hour.*

loading sequence *n.*
The order in which holds or tanks are filled.
e.g. *Question: what is the loading sequence?*

to top off *v. phr.*
To fill a tank slowly to its final level.
e.g. *Reduce the rate for topping off.*

ullage *n.*
Distance from the specified tank reference point down to the liquid surface.
e.g. *The ullage in tank four is one point two metres.*

draft survey *n.*
Weighing cargo by measuring the vessel's displacement.
e.g. *The initial draft survey was carried out at 0900.*

stowage *n.*
The way cargo is placed and secured on board.
e.g. *Check the stowage before the hatches are closed.*

lashing *n.*
A rope, wire or chain securing cargo in place.
e.g. *Two containers in bay twelve have loose lashings.*

dunnage *n.*
Material laid under or between cargo to protect it.
e.g. *The bags were stowed on double dunnage.*

segregation *n.*
Separating incompatible goods as required by the applicable cargo-specific provisions.
e.g. *Check the segregation table before stowage.*

IMDG Code *n.*
The international code governing dangerous goods by sea.
e.g. *The IMDG Code sets the class and the segregation.*

hazard class *n.*
The numbered category of a dangerous cargo.
e.g. *Class three is flammable liquids.*

placard *n.*
A hazard sign displayed on a cargo transport unit; packages use labels.
e.g. *Two containers have damaged placards.*

to reject *v.*
To refuse to load a unit that does not meet requirements.
e.g. *Do not load the damaged containers; reject them.*

cargo pump *n.*
The pump moving liquid cargo to or from the tanks.
e.g. *Stop the cargo pump immediately.*

manifold *n.*
The fixed pipe connection where cargo hoses are attached.
e.g. *Samples are drawn at the ship's manifold.*

emergency stop *n.*
The control that halts transfer at once.
e.g. *Stand by the emergency stop during topping off.*

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Which four terms apply to liquid cargo rather than to containers?
2. Which three terms relate specifically to dangerous goods?
3. Write one sentence stating a loading rate with its unit:

NOTES

UNIT 8 | B READING AND LISTENING

Stop Loading in Hold Three

The situation
An invented general-cargo operation. The transport documents identify the cargo classes. The dialogue practises quantities, defects and requests for verification; it does not supply a complete IMDG stowage decision.

CHIEF OFFICER Loading master, confirm the sequence. Holds two and four first, then one and three.

LOADING MASTER Confirmed. The present loading rate is eight hundred tonnes per hour. We have loaded four thousand two hundred tonnes; eleven thousand eight hundred tonnes remain. There are fewer trucks today, so the rate may fall.

CHIEF OFFICER Duty engineer, report the ballast status.

DUTY ENGINEER Pump number one is running at about six hundred cubic metres per hour. Number two is on standby. We are following the approved ballast plan.

CHIEF OFFICER For this stage, the plan gives a trim limit of one metre by the stern. Report any approach to the limit.

DECK CADET Two units in hold three have damaged placards. One is torn and the other cannot be read. Their identifiers match the transport documents, which list Class 3 cargo.

CHIEF OFFICER INSTRUCTION. Stop loading in hold three. Hold those two units pending verification.

LOADING MASTER Loading stopped in hold three at 1115 LT. What action is required?

CHIEF OFFICER Do not accept the units as compliant while required information is unreadable. Arrange rectification or removal under the agreed safe handling plan. Provide a corrected stowage proposal and check the applicable cargo-specific segregation requirements before resuming.

LOADING MASTER Understood. We will send the revised proposal within thirty minutes. What about the other holds?

CHIEF OFFICER Their work has been separately reviewed and may continue under the agreed plan in this case. Cadet, record the identifiers and time and obtain photographs from a safe position. I will issue a written protest and request acknowledgement of receipt.

Original classroom dialogue adapted from the supplied manuscript. Operational data are fictional; this is not a complete operating procedure.

Code edition reference: S5. Cargo-specific requirements must be checked in the full applicable Code and vessel documents; class numbers alone are not a full stowage assessment.

CLASS NOTES

UNIT 8 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. What is the agreed loading sequence, and how much cargo has been loaded so far?

2. Why might the loading rate fall this afternoon?

3. What is the ballast discharge rate, and what trim does the Chief Officer require?

4. What is wrong with the two placards, and which document identifies the cargo as Class 3?

5. List the four actions the Chief Officer takes after the cadet's report. B

Language in context

1. "fewer trucks" — find this. Why fewer and not less? What kind of noun is trucks?

2. "How much cargo remains" — find this. Why much and not many here?

3. "INSTRUCTION: stop loading" — find this. Why does the Chief Officer use a marker?

4. What facts should a note of protest record? Does receiving it necessarily mean the terminal agrees with every statement?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “Before Loading Continues: Checking Cargo Information”. Compare the information you hear with the information a reader can verify.

CLASS NOTES

UNIT 8 | B2 SHIPBOARD DOCUMENT

Letter of protest - a factual record

LETTER OF PROTEST	No. 03/24A | MV ANDAMAN TRADER
To / copies	Terminal Manager; copies to owners, charterers and agent as directed.
Subject	Damaged required placards on two units in Hold 3.
Observed at 1112 LT	One required placard torn; one unreadable. Unit identifiers matched the supplied transport documents, which recorded Class 3 cargo.
Action at 1115 LT	Chief Officer stopped loading in Hold 3 and held the two units pending verification.
Other work	Holds 1, 2 and 4 continued following a separate review and agreement for this case.
Evidence	Identifiers, times and safely obtained photographs retained with this record.
Required follow-up	Rectification or removal under the agreed safe handling plan. Revised stowage proposal and cargo-specific checks required before resumption.
Reservation	Rights reserved, subject to applicable contract and law. This classroom wording does not determine legal liability.
Receipt	Received by: _____ Date/time: _____

Work with the document

1. Find three facts also spoken in the dialogue.

2. Why does the letter state which holds were affected and which continued?

3. Does a receipt signature necessarily mean agreement with the letter? Explain the difference.

4. Write two factual protest paragraphs about the five-fault plan in Resource 8. Do not assert legal conclusions.

UNIT 8 | B3 READING FOR MEANING

Before Loading Continues: Checking Cargo Information

Before you read
Could a damaged symbol alone provide enough information to identify a cargo?

Reading focus: Cross-check documents, quantities and a supplied instruction.

A A cargo check compares several sources, not just one label. The officer needs the cargo identity in the transport documents, the unit identification, the applicable hazard information and the relevant stowage instructions. A damaged placard is reported as damaged. Its appearance alone does not prove which substance is inside the unit.

B At 1010 LT on MV Cedar Bay, the cadet compares Unit C31 with a document supplied for the exercise. The document identifies the cargo as Class 3, flammable liquid. The unit identification agrees, but one required placard is unreadable. The cadet reports that observation and the document reference to the Chief Officer. The officer holds the affected unit pending verification and arranges a check with the terminal. The cadet does not guess what the damaged placard says.

C The practice plan contains a second problem. Unit O51 is listed as Division 5.1. A written instruction from the fictional cargo officer requires C31 and O51 to be placed in different numbered bays for this exercise, but both appear in Bay 12. Students can identify that conflict by reading the instruction and the plan. This simplified instruction is not an IMDG segregation table and must not be used to plan a real shipment.

D At 1040 the terminal sends revised information. Before recording the matter as closed, the officer checks that the unit details and required markings have been verified and that the plan reflects the agreed corrections. Actual dangerous-goods decisions require the current Code, the specific entry and the vessel's procedures. For this 2026 course reference, the IMDG Code 2024 Edition includes Amendment 42-24. A clear written record states what was checked, what remains unresolved and who must report next.

Word support

discrepancy: a difference between records that should agree | **legible**: clear enough to read | **verify**: check against evidence

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S5, S9; see Sources and editorial notes.

CLASS NOTES

UNIT 8 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. What is the main purpose of the article?

2. What is unreadable on Unit C31?

3. Which source identifies C31 as Class 3?

4. What is the division number listed for O51?

5. What does legible mean?

6. What does both refer to in paragraph C?

7. Explain the conflict between the practice plan and the supplied instruction.

8. Why may the practice instruction not be used to approve real stowage?

9. Write a factual two-sentence report about C31 at 1010.

10. State two checks to make before recording the matter as closed.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 8 | C GRAMMAR - FORMS AND MEANING

Countable nouns and quantifiers

A countable noun names separate items: a container, two pumps. An uncountable noun names a substance or a general category: fuel, equipment. Use a unit or counting phrase when you need an exact quantity.

Use	Countable examples	Uncountable examples
Nouns	containers, drums, trucks, pumps	fuel, ballast water, equipment, information
Question	How many containers?	How much cargo?
Large quantity	many / a large number of containers	much / a large amount of cargo
Small positive quantity	a few drums	a little fuel
Smaller quantity	fewer trucks	less ballast water
Exact quantity	three pumps / twenty tonnes	three items of equipment / twenty tonnes of cargo

Count the unit, not the substance

How much cargo remains? How many tonnes remain? Cargo refers to the material collectively; tonnes are countable units. Include the unit when reporting a number.

Common general meanings

Equipment, machinery and information are uncountable in the meanings used here: two items of equipment, not two equipments. Cargo usually functions as a mass noun here, although cargoes can mean separate loads. Damage is uncountable for physical harm; legal damages has a different meaning.

A few / few and a little / little

A few containers means some containers. Few containers emphasises a small number. A little fuel means some fuel; little fuel emphasises that the amount is small. In positive everyday sentences, a lot of is often more natural than much.

Examples are for language learning. Sources: S1; see editorial notes.

CLASS NOTES

UNIT 8 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: How much containers? Correct: How many containers? Incorrect: Three equipments. Correct: Three items of equipment.

Study the examples

1. There are fewer trucks than yesterday.

2. We discharged less ballast water than planned.

3. How many tonnes have been loaded?

4. A number of containers are awaiting checks.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. How _____ cargo remains?

2. Use fewer or less: There are _____ trucks today.

3. Use a few: _____ containers have loose lashings.

4. Use fewer or less: We discharged _____ ballast water.

5. Use items of: There are three _____ equipment in the locker.

6. _____ _____ tonnes have been loaded?

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 8 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Use a counting phrase: two machinerys -> two pieces of machinery

Activity B - rewrite as instructed

1. Correct the quantifier: How many cargo remains?

2. Use fewer and correct the verb: There is less trucks today.

3. Ask about quantity: Four thousand two hundred tonnes have been loaded.

4. Use items of: We have three equipments in the locker.

5. Ask about quantity using much: Ballast water remains in the tanks.

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. How much containers are affected in hold three?

2. There were less trucks today, so the rate fell.

3. We loaded a large number of cargo this morning.

4. Fewer equipment was available than we expected.

5. How many ballast did you discharge during the operation?

CLASS NOTES

UNIT 8 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
we / have / three items / equipment -> We have three items of equipment.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. how much / cargo / remain / for this parcel ?

2. there / be / fewer trucks / today / than yesterday

3. two units / hold three / have / damaged placards

4. we / discharge / less ballast / than planned

5. only / a few items / safety equipment / in that locker

Activity E - your turn

Write eight sentences about a cargo operation. Use much, many, fewer, less, a few and a little at least once each, and make
sure every quantity carries its unit.

D SPEAKING PRACTICE

threes, ship and terminal

Agree a plan, monitor it, and then stop it when something is wrong. The language aim is quantity and rate; the professional aim is the authority to halt an operation and to say why in words that will stand in a document afterwards.

PHRASE BANK - USE AT LEAST FOUR OF THESE

- Confirm the loading sequence, please.
- How much cargo remains?
- INSTRUCTION: stop loading in hold ...
- Keep the trim within ... metres.
- What is the current rate?
- How many units are affected?
- I am rejecting ... because ...
- I will require your signature.

D HOW TO RUN THE TASK

follow the steps in order

1. The loading master gives the rate and the quantity loaded so far.
2. The Chief Officer asks the duty engineer for the ballast rate and states a trim limit.
3. The teacher passes a problem card to the Chief Officer at a random point.
4. The Chief Officer must stop the operation and give a reason in one sentence.
5. The loading master asks what to do with the affected units; agree an action and a time.
6. Rotate roles so each student holds the authority to stop the operation at least once.

ACTIVITY - AFTER YOU HAVE SPOKEN

1. At what point did you stop the operation, and could you have stopped it earlier?
2. Write the one sentence you used to state your reason. Could it be shorter and still clear?
3. Which quantifier did you or your partner use wrongly? Write the correct version.

NOTES

Use the supplied Visual Resource 8 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

UNIT 8 | E PRACTICAL LANGUAGE TASK

Check the plan using supplied evidence

Materials
Use Resources 8a-8c: cargo cards, the draft bay plan, the required conditions in the manifest and a record form. The separation condition is invented for this classroom case, not an IMDG table.

1. Read each cargo card. Identify the unit, quantity, documented class, required marking condition and assigned location.

2. Read the required conditions in the manifest before judging the plan. Circle the five discrepancies and identify the relevant unit and document row beside each.

3. For every discrepancy, write what the evidence shows and what information is still missing. Use accurate quantities and countable/uncountable forms.

4. State which affected units must be held under the supplied instruction. Do not assume that unmentioned work has permission to continue.

5. Complete the record in Resource 8c: identifier, observation, instruction, requested correction, responsible role and next check.

6. Exchange reports with another group. Challenge a statement only by pointing to the card, plan or written instruction.

Check your performance	Yes / partly / not yet
All five discrepancies supported by a specific source	
Quantities and units retained accurately	
Observed defects separated from unchecked information	
No invented general segregation rule	
Clear hold instruction and follow-up request	
Correct much/many and less/fewer where used	

1. Choose one discrepancy. Write a factual hold instruction and the evidence supporting it.

UNIT 8 | VISUAL AND PRACTICAL RESOURCE

Cargo information: symbols and documents

These redrawn reference symbols support recognition only. Read the class or division number as well as the symbol. They are not full-size regulatory labels for use on cargo.

CLASS 3
Flammable liquids

DIVISION 5.1
Oxidizing substances

Symbol reference: S9, DOT Chart 17. No U.S. quantity thresholds or carriage permissions are applied here. Maritime stowage requires cargo-specific IMDG checks (S5).

Supplied training manifest and checks

Unit	Document / required condition	Observed or plan data
C31	Class 3; correct unit ID; legible required placards	One required placard unreadable.
O51	Division 5.1; separate bay from C31 for this exercise	Proposed in Bay 12 with C31.
D04	Documented gross mass: 12 tonnes	Plan mass: 15 tonnes.
R07	Refrigerated unit; power connection required	Assigned slot has no power available.
G10	General cargo, approved for Bay 16	Data agree; no defect stated.
U99	No entry in the supplied approved manifest	Shown in the draft plan.

SCOPE OF THE EXERCISE
The C31/O51 separation condition is an invented cargo officer's instruction for this exercise. It is NOT an IMDG segregation table. A real cargo check requires the actual UN entry, subsidiary hazards and applicable requirements.

CLASS NOTES

UNIT 8 | VISUAL AND PRACTICAL RESOURCE

Check the draft bay plan

There are five discrepancies when this plan is compared with V8a. Circle their locations and describe each one. One issue concerns the supplied separation condition; others concern identity, markings, mass and service availability.

BAY 12	BAY 14	BAY 16
C31 Placard unreadable	**D04** Plan mass 15 t	**U99** Not listed in manifest
O51 Division 5.1	**R07** Power unavailable	**G10** Data agree

Simplified classroom bay / slot layout, not a ship's approved stowage or stability plan.

V8.1. Discrepancy: unit(s), evidence and correction/clarification needed.

V8.2. Discrepancy: unit(s), evidence and correction/clarification needed.

V8.3. Discrepancy: unit(s), evidence and correction/clarification needed.

V8.4. Discrepancy: unit(s), evidence and correction/clarification needed.

V8.5. Discrepancy: unit(s), evidence and correction/clarification needed.

CLASS NOTES

UNIT 8 | VISUAL AND PRACTICAL RESOURCE

Record a cargo discrepancy

Choose one discrepancy from V8a-b. Write the facts first. Request a check or correction using the supplied records. Do not invent a legal outcome or authorise a resumption of work.

Field	Your record
Vessel / time / unit identifiers	
Observed problem	
Document or instruction used as evidence	
Action already taken (if supplied)	
Clarification or correction requested	
Outstanding confirmation / responsible role	

Two quantities, two question forms

V8.6. Write a question about the number of affected containers.

V8.7. Write a question about the amount of cargo remaining.

A language record is not a compliance approval. Reference edition for this course: IMDG Code 2024 Edition, Amendment 42-24, mandatory 1 January 2026 (S5).

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET

complete without looking back

Part 1 - Match the term to its meaning.

1.	ullage	☐	a. The hazard label on a container
2.	segregation	☐	b. Material laid under cargo to protect it
3.	lashing	☐	c. Keeping incompatible cargoes apart
4.	dunnage	☐	d. The empty space above a liquid cargo
5.	placard	☐	e. The fixed connection for cargo hoses
6.	loading rate	☐	f. A wire or chain securing cargo
7.	manifold	☐	g. To fill a tank slowly to its final level
8.	to top off	☐	h. Tonnes or cubic metres per hour

Part 2 - Complete each sentence with one word.

1. How _____ cargo remains for this parcel?
2. There are _____ trucks today than yesterday, so the rate may fall.
3. Two units in hold three have damaged _____ and cannot be accepted.
4. Reduce the rate for _____ off and stand by the emergency stop.
5. Check the _____ table before agreeing the stowage of class three units.
6. INSTRUCTION: _____ loading in hold three immediately.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. Explain the difference between fewer and less, and give one cargo example of each.

2. A container of class three has an unreadable placard. What should the officer do, and why?

3. Why does an officer write a note of protest rather than simply telling the terminal?

Part 4 - Write a cargo stoppage exchange.

Write an exchange of at least eight turns in which a ship's officer stops a cargo operation. Include two quantity questions, two figures with units, one correct use of fewer and one of less, and a clear statement of the reason for stopping.

SELF-CHECK

- [ ] I can say how much cargo has been loaded and how much remains.
- [ ] I can use much, many, less and fewer correctly with cargo nouns.
- [ ] I can stop an operation in English and say why.
- [ ] I can state a segregation requirement for dangerous goods.

NOTES

UNIT 8 SUMMATIVE TEST

Cargo Operations and Dangerous Goods

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. How fast cargo is loaded, in tonnes per hour. _____
2. The empty space above a liquid cargo. _____
3. Keeping incompatible cargoes apart by a required distance. _____
4. A wire or chain securing cargo in place. _____
5. Material laid under cargo to protect it. _____
6. The hazard label displayed on a container. _____
7. The international code governing dangerous goods by sea. _____
8. To fill a tank slowly to its final level. _____
9. The fixed pipe connection where cargo hoses are attached. _____
10. The control that halts a transfer at once. _____
11. The order in which holds or tanks are filled. _____
12. Weighing cargo by measuring the vessel's displacement. _____
13. The numbered category of a dangerous cargo. _____
14. To refuse to load a unit that does not meet requirements. _____

Word bank: draft survey · dunnage · emergency stop · hazard class · IMDG Code · lashing · loading rate · loading sequence · manifold · placard · segregation · to reject · to top off · ullage

B. GRAMMAR

one mark each **14 marks**

1. How _____ cargo remains for this parcel?
2. There are _____ trucks today than yesterday, so the rate may fall.
3. Use a few: _____ containers in bay twelve have loose lashings.
4. We discharged _____ ballast than planned because of the trim.
5. Use a few: There are only _____ items of equipment in that locker.
6. How _____ units are affected by the damaged placards?
7. Use many: We loaded _____ tonnes before the operation stopped.
8. Correct the error: How much containers are affected in hold three?

_____

9. Correct the error: There were less trucks today, so the rate fell.

_____

10. Correct the error: We loaded a large number of cargo this morning.

_____

11. Rewrite with the correct quantifier: How many cargo remains?

_____

12. Rewrite using a counting word: We have three equipments in the locker.

_____

13. Build a sentence: two units / hold three / have / damaged placards

_____

14. Build a sentence: we / discharge / less ballast / than planned

_____

C. READING

answer in full sentences **14 marks**

Loading began at 0600 with an initial rate of 750 tonnes per hour, holds two and four first. By 1100 a total of 3,600 tonnes had been loaded and about 9,400 tonnes remained. There were fewer trucks than on the previous day and the terminal warned that the rate might fall in the afternoon. Ballast was being discharged at 550 cubic metres per hour by number one pump, with number two on standby, and the Chief Officer required the trim to be kept within one metre by the stern. At 1112 a cadet reported two class 3 units in hold three with damaged placards. Loading in hold three was stopped at 1115 and both units were held pending verification, while the other three holds continued loading without interruption for the rest of the afternoon.

1. What was the loading rate, and how much cargo had been loaded by 1100?

2. Why might the rate fall in the afternoon?

3. What was the ballast discharge rate, and what trim was required?

4. What was wrong with the two units, and what class were they?

5. State the two times that matter in this account and say what happened at each.

6. Which holds continued loading after the stoppage, and for how long?

7. How much cargo remained to be loaded at 1100, according to the passage?

D. WRITING — 12 marks

Write an exchange of at least eight turns in which a ship's officer stops a cargo operation. Include two quantity questions, two figures with units, one correct use of fewer and one of less, and a clear statement of the reason for stopping.

E. SPEAKING — *assessed by the teacher* — 8 marks

You are the Chief Officer. Agree a loading sequence with your teacher, then stop the operation when a problem is reported and state your reason.

Criterion	2	1	0
Uses much and many correctly with the right noun type	☐	☐	☐
States every quantity with its unit	☐	☐	☐
Uses INSTRUCTION when stopping the operation	☐	☐	☐
Gives a clear, factual reason for the stoppage	☐	☐	☐

UNIT 9

Machinery, Faults and Maintenance

Describing how a machine works, reporting a fault so that another person can act on it, and reading a procedure written by somebody you will never meet.

MODEL COURSE 3.17 LINKAGE

Core Section 1 and 2 - machinery operation, breakdowns, repairs, operating manuals.

STCW Table A-III/1 and A-III/6: describe machinery, report faults and interpret manuals in English.

O LEARNING OBJECTIVES

tagged with cognitive level

1	Describe how a named machine works, using the passive where the actor is irrelevant.	UNDERSTAND	ENGINE
2	Report a fault giving symptom, time, action taken and present status.	APPLY	DECK + ENGINE
3	Follow a written procedure and state where a step could not be completed.	APPLY	ENGINE
4	Distinguish a symptom from a cause in a fault report.	ANALYSE	DECK + ENGINE

C CAN-DO CHECKLIST

tick when you can do it unaided

- [ ] I can describe a machine's operation in sequence.
- [ ] I can report a fault in four parts without being prompted.
- [ ] I can say what I have already tried and what the result was.
- [ ] I can tell a symptom from a cause and not confuse them.

Illustrative machinery inspection. Isolation controls are not shown.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

main engine *n.*
The engine that propels the vessel.
e.g. *The main engine is running at seventy-two RPM.*

auxiliary n. / adj.
Machinery supporting the main plant, such as a generator.
e.g. *Number two auxiliary is on load.*

purifier *n.*
A machine that cleans fuel or lubricating oil by separation.
e.g. *The fuel oil purifier tripped at 0620.*

to trip *v.*
Of machinery, to shut down automatically on a fault.
e.g. *The pump tripped on high temperature.*

to reset *v.*
To return a tripped device to the ready condition.
e.g. *I reset the purifier and it ran normally.*

bearing *n.*
The component supporting a rotating shaft.
e.g. *The bearing temperature is rising slowly.*

suction / discharge *n.*
The inlet side / outlet side of a pump.
e.g. *Suction pressure is low; discharge is normal.*

leak *n. / v.*
An unwanted escape of liquid or gas.
e.g. *There is a small oil leak at the flange.*

vibration *n.*
Unwanted shaking of a machine.
e.g. *Excessive vibration was noticed at full load.*

spare part *n.*
A replacement component held on board.
e.g. *The spare part was ordered under requisition R-2026-041.*

planned maintenance *n.*
Scheduled work carried out before failure occurs.
e.g. *The overhaul is due under the planned maintenance system.*

overhaul *n. / v.*
A complete strip-down, inspection and reassembly.
e.g. *Number three unit is due for overhaul at 12,000 hours.*

to isolate *v.*
To separate equipment from relevant energy sources under verified controls.
e.g. *Isolate the pump before opening the casing.*

permit to work *n.*
Written authorisation for a hazardous job.
e.g. *Do not start hot work before the permit is signed.*

symptom *n.*
What can be observed when something is wrong.
e.g. *The symptom is a falling suction pressure.*

cause *n.*
The reason the symptom occurs.
e.g. Inspection identified strainer fouling as a possible contributor.

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Which two terms are a pair of opposites describing the sides of a pump?

2. Which term describes what you see, and which describes why it happens?

3. Write one sentence reporting a fault you have seen or read about:

NOTES

UNIT 9 | B READING AND LISTENING

The Purifier Trips Again

The situation
At 0930 LT the Fourth Engineer reports a second trip. Readings and comparison values describe this invented system only. The exchange is a reporting model, not authority to open hot fuel equipment.

FOURTH ENGINEER Second Engineer, the fuel-oil purifier has tripped again. The alarm appeared at 0918, about three hours after the earlier reset at 0620.

SECOND ENGINEER What alarm and readings were recorded?

FOURTH ENGINEER High outlet temperature. The heater outlet reading was 102 degrees Celsius; the recorded reference for this operation is 98 degrees. Feed-pump suction pressure was 0.8 bar compared with the earlier 1.2 bar. I have not carried out an internal inspection.

SECOND ENGINEER Record those as symptoms and comparison readings. They do not prove a cause. Do not reset again without authorisation. We need to review the alarm history and the approved procedure.

FOURTH ENGINEER Is a blocked strainer a possible explanation?

SECOND ENGINEER It is a possibility to investigate, not a confirmed finding. The line is hot. Before any opening, authorised personnel must complete the required risk assessment, permits and verified isolation of every relevant energy source. A tag alone is not proof of safe isolation.

OOW Engine control room, bridge. Does the defect affect manoeuvring?

SECOND ENGINEER The Chief Engineer has confirmed that propulsion is currently unaffected and the available clean service-tank fuel is adequate for the present operation. We will report any change immediately and give the next update by 1200. A repair time is not confirmed.

FOURTH ENGINEER I will record the event time, alarm, readings, action restrictions and next report. I will keep suspected causes separate from findings.

SECOND ENGINEER Correct. Open the work record, not the equipment, until the authorised checks are complete.

Original classroom dialogue adapted from the supplied manuscript. Operational data are fictional; this is not a complete operating procedure.

Maintenance safety principles: S10. Actual controls depend on the equipment, manufacturer instructions, vessel SMS and authorised personnel.

CLASS NOTES

UNIT 9 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. At what time did the purifier trip, and what alarm appeared?

2. What two readings are recorded, with their units?

3. Does either reading by itself establish the cause? Explain.

4. Why is another reset not authorised in this case?

5. What status and next reporting time are given to the bridge?

Language in context

1. "has tripped" / "tripped" — find both. Why is one present perfect and one past simple?

2. Find the request for the alarm and readings. Why does the senior engineer ask for these before accepting a cause?

3. Which information is a symptom, and what remains unconfirmed?

4. Why is a tag alone not proof that all sources of energy have been made safe?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “Report the Symptom, Check the Cause”. Compare the information you hear with the information a reader can verify.

CLASS NOTES

UNIT 9 | B2 SHIPBOARD DOCUMENT

Maintenance work order - evidence and status

WORK RECORD	WO-2026-0184 | Fuel-oil purifier No. 1
Raised	4/E, 0935 LT, 4 March. Priority: equipment unavailable.
Observed event	High outlet-temperature trip at 0918; previous reset 0620.
Recorded readings	Heater outlet 102 °C (reference 98 °C); suction 0.8 bar (earlier 1.2 bar). Cause not established from readings alone.
Restriction	No further reset or opening without the authorised procedure and verified controls.
Authorisation record	Competent personnel to verify all required energy isolation, pressure release, cooling, permits and safe access before work. This is a record summary, not a complete procedure.
Later inspection finding	After authorised preparation, strainer fouling was recorded as approximately 60% by visual estimate. Debris origin not confirmed.
Work recorded	Strainer cleaned and joint renewed under the approved procedure.
Test record	Restart authorised at 1105. Outlet reading 98 °C, stable at the 1305 observation.
Cause status	Restriction identified as a possible contributing factor; underlying reason for debris requires investigation.
Follow-up	Second Engineer to review the inspection interval against manufacturer guidance and records; recommendation due 20 March. No universal 250-hour interval is prescribed.

Work with the document

1. Find two abnormal readings and their comparison values.

2. Why is a tag alone not enough to authorise opening?

3. Name one symptom, one later finding and one matter still unconfirmed.

4. Use the six headings in Resource 9c to write a different fictional fault record.

CLASS NOTES

UNIT 9 | B3 READING FOR MEANING

Report the Symptom, Check the Cause

Before you read
Does an alarm message prove the underlying cause of a machinery fault?

Reading focus: Separate readings, possible causes, findings and current status.

A A useful machinery report starts with what has been observed. A low reading, an alarm and unusual vibration are symptoms. An explanation for them is a possible cause until it is checked. Calling a component blocked before it has been inspected turns an assumption into a finding and can mislead the next person.

B At 0918 LT in this fictional training case, fresh-water transfer pump P2 trips. Its discharge pressure before the trip is 1.6 bar; the comparison reading from the previous stable run was 3.0 bar under the same stated conditions. The Fourth Engineer reports the readings and time. No leak is visible during the external check. The engineer does not open any joint or attempt another reset.

C The Second Engineer arranges an authorised investigation under the vessel's procedures. The training status card must confirm the required isolation, release of stored energy and permission before students advance the paper exercise. In one version of the task, the isolation record has not been signed. The group stops at that point, reports the missing authorisation and records that the inspection has not yet started. A classroom checklist is not a real work permit.

D In the completed case, the authorised inspection finds debris in the suction strainer. That is a finding. After cleaning and authorised recommissioning at 1105, the discharge pressure is 3.0 bar under the comparison conditions. The engineer records the result and a further observation time of 1135. The improvement supports investigation of the restriction, but the reason debris entered the system still needs review. The final report separates the symptom, the confirmed finding, the action and the present status. It does not turn a successful restart into proof that every cause has been found.

Word support

symptom: an observable sign of a problem | **possible cause**: an explanation not yet established | **recommission**: return equipment to authorised service

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S10; see Sources and editorial notes.

CLASS NOTES

UNIT 9 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. What is the main message of the article?

2. Which pump trips, and at what time?

3. What is the discharge pressure before the trip?

4. When is the further observation due?

5. What does possible cause mean here?

6. What does That refer to in “That is a finding”?

7. Why does one group stop before inspection?

8. What question remains unresolved after pressure returns to 3.0 bar?

9. Write a past simple sentence reporting the trip and its time.

10. Write one finding sentence and one sentence about the next check.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 9 | C GRAMMAR - FORMS AND MEANING

Passive reports; present perfect and past simple

Use the present perfect for a past event whose result or unfinished time period matters now. Use the past simple for an event located in a finished past time. Use a passive form when the affected equipment or action is the focus.

Use	Form	Example
General process	is/are + past participle	The fuel is heated before separation.
Finished past action	was/were + past participle	The strainer was cleaned at 1100 yesterday.
Event with current result	has/have + past participle	The pump has stopped and is unavailable.
Passive current result	has/have been + past participle	The unit has been isolated.
Question about work so far	Have/Has + subject + past participle?	What have you checked?
Finished event time	past simple	The alarm sounded at 0918.

A time expression does not always require past simple

Yesterday and at 0918 in a finished report locate past events. Today, so far and since 0800 can refer to an unfinished period: The pump has stopped twice today. Use meaning, not the mere presence of a time word.

Already and yet

Already usually goes between have and the participle: I have already checked the reading. Yet commonly ends a negative or question: I have not checked it yet. Have you checked it yet?

Keep language evidence-based

An alarm or low pressure is an observed symptom. A suspected restriction is a hypothesis. A recorded inspection finding is evidence. Do not turn an untested explanation into a confirmed cause. Neither a grammar pattern nor a diagram authorises maintenance.

Examples are for language learning. Sources: S1; see editorial notes.

CLASS NOTES

UNIT 9 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: The unit has been isolate. Correct: The unit has been isolated. Incorrect: It has stopped yesterday. Correct: It stopped yesterday.

Study the examples

1. The alarm sounded at 0918.

2. The unit has remained out of service.

3. The strainer was inspected under the authorised procedure.

4. The cause has not been confirmed.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. Use general passive: The fuel _____ (heat) before separation.

2. Use present perfect: The pump _____ (stop) twice today.

3. Use past simple: The alarm _____ (sound) at 0918 yesterday.

4. Use past passive: The unit _____ (isolate) before work began.

5. What _____ you already _____ (check)?

6. Use past passive: The strainer _____ (clean) at 1100 yesterday.

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 9 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Use past passive: The engineer inspected the bearing. -> The bearing was inspected by the engineer.

Activity B - rewrite as instructed

1. Rewrite in the passive: Somebody cleaned the strainer at 1030.

2. Rewrite in the present perfect: The purifier tripped. It is still not running.

3. Rewrite in the passive with a present result: We have isolated the unit.

4. Rewrite in the past simple: The alarm has come up at 0918.

5. Rewrite as a question: You have already checked the suction pressure.

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. The purifier has tripped at 0918 and shut down automatically.

2. The fuel is heat before it enters the purifier.

3. The unit was isolate and tagged before the strainer was opened.

4. What have you already checking?

5. The strainer has been cleaned yesterday and the pump was restarted.

CLASS NOTES

UNIT 9 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
the alarm / record / 0918 / past passive -> The alarm was recorded at 0918.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. the fuel / heat / before / it / enter / the purifier

2. the purifier / trip / twice today / it / still / not run

3. the unit / isolate / and / tag / before work started

4. what / you / already / check ?

5. the strainer / clean / and / the pump / restart / 1105

Activity E - your turn

Write a fault report of eight sentences about a machine you know. Use at least three passive forms and two present perfect
forms. Keep the symptom and the probable cause in separate sentences and label each one.

D SPEAKING PRACTICE

pairs, fault reporting

Use this four-part model: symptom and time; checks and findings; action and present status; owner and next update. Practise until you can give all four without being prompted, so the receiving officer can understand the status clearly.

PHRASE BANK - USE AT LEAST FOUR OF THESE

- The ... has tripped / has stopped / is leaking.
- I have already checked ...
- I have isolated and tagged the unit.
- Do I need a permit for this?
- The alarm came up at ...
- The reading was ... , about ... above normal.
- The symptom is ... ; the probable cause is ...
- I will report again by ...

D HOW TO RUN THE TASK

follow the steps in order

1. The junior engineer takes a fault card and prepares for thirty seconds only.
2. Report the fault in four parts, in order, without notes.
3. The Second Engineer asks for any missing part, then asks for symptom and cause separately.
4. Agree an action, a permit requirement if any, and a reporting time.
5. Swap roles with a new card.
6. Third round: the bridge interrupts mid-report. The Second Engineer must summarise the operational effect in two sentences.

ACTIVITY - AFTER YOU HAVE SPOKEN

1. Which of the four parts of the fault report did you forget first?

2. Write your symptom sentence and your cause sentence again, clearly separated.

3. What reporting time did you agree, and why that interval?

NOTES

Use the supplied Visual Resource 9 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

UNIT 9 | E PRACTICAL LANGUAGE TASK

Follow the written record-check procedure

Resources and limits
Use Resources 9a-9c. The nine-step procedure is a paper verification task. No participant operates, isolates, opens or restarts equipment. Real maintenance requires authorised personnel and the vessel's complete procedure.

1. In groups of three, read the nine steps aloud in order. One is the recorder, one the checker and one the observer.

2. Match each document field to its equipment identifier. Confirm that the readings belong to the stated point on the diagram.

3. At the unsigned verification field, stop the paper workflow. Do not tick or sign it yourself.

4. Give a four-part report: symptom and time; checks and findings; action and present status; next update and responsible person.

5. Complete the classroom record with “not verified” where appropriate. Do not replace an unknown with a guess.

6. Exchange records. The other group checks whether the report distinguishes symptom, observation, possible cause and authorisation status.

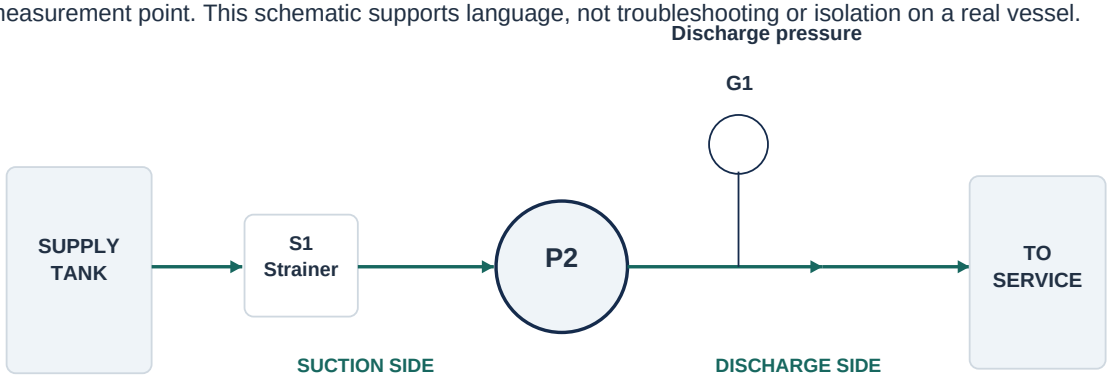

Observer check	Yes / partly / not yet
Uses each step and field in order	
Stops at missing verification	
States readings with their units	
Does not perform or authorise maintenance	
Separates findings and possible causes	
Records a responsible person and next update	

1. Write the status report you would give when verification is missing.

UNIT 9 | VISUAL AND PRACTICAL RESOURCE

Read the system, then read the evidence

Follow the flow arrows on the conceptual fresh-water line. Name the strainer, pump and discharge measurement point. This schematic supports language, not troubleshooting or isolation on a real vessel.

Conceptual water-transfer diagram. Flow direction and measurement point only; valves, protection and isolation arrangements are not fully shown. Not an operating or isolation drawing.

Time / condition	Reported evidence
Before fault: stable run	Discharge pressure 3.0 bar under the comparison conditions.
0918 LT	P2 trips; recorded discharge pressure before trip 1.6 bar.
Initial external check	No visible leak; cause not confirmed.
Authorised inspection	Debris found in suction strainer S1.
1105 LT	After authorised work and recommissioning, pressure 3.0 bar.
1135 LT	Further observation due; cause of debris still to be reviewed.

V9.1. Name the measurement point and give the before-fault comparison reading.

V9.2. Separate one symptom from one confirmed inspection finding.

V9.3. What explanation is still not established after the pressure recovers?

CLASS NOTES

UNIT 9 | VISUAL AND PRACTICAL RESOURCE

Paper maintenance-record procedure

CLASSROOM ONLY
Do not operate, open, isolate, test or restart equipment. This is a paper-based procedure for checking a work record. On a vessel, competent authorised personnel must use the actual SMS, permit system and manufacturer's instructions.

1. Read the work order and identify the exact equipment: P2, fresh-water transfer pump.

2. Copy the time, alarm and available readings. Mark unknown information as not confirmed.

3. Check that the requested task and responsible person are stated.

4. Check the authorisation record: required isolation, lock/tag arrangements, stored-energy controls and verification must be recorded by the authorised person.

5. If any required verification or permission is missing, STOP the paper sequence. Report the missing item. Do not fill in a signature yourself.

6. Only when the teacher supplies an authorised-completion card, read its inspection findings. Do not invent a finding.

7. Separate the symptom from the confirmed finding and any still-possible cause.

8. Copy only the recommissioning status that the completion card confirms.

9. Record the next check, owner and time. Hand over any outstanding issue.

STOP-POINT VERSION
Fault card: P2 tripped at 0918. Discharge pressure before trip 1.6 bar. Authorisation record: isolation verification NOT signed. Current status: inspection not started. Responsible officer: Second Engineer. Next update: 1000 LT.

V9.4. At which step must you stop, and what must you report?

General safety concepts: S10. The record-check procedure and values are original classroom materials, not a vessel-specific maintenance instruction.

CLASS NOTES

UNIT 9 | VISUAL AND PRACTICAL RESOURCE

Work status and isolation-record check

Complete this record using the stop-point card on V9b. Tick only what is explicitly verified. A blank field means not confirmed, not permission to proceed.

Record field	Supplied evidence / status
Equipment and work-order reference	
Fault time / symptom / readings	
Responsible officer	
Required permission recorded?	
Isolation and stored-energy verification recorded?	
Missing verification / stopping point	
Inspection findings available?	
Present status / next update	

V9.5. Write a four-part report: symptom/time; checks; action/status; next report.

CLASS NOTES

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET

complete without looking back

Part 1 - Match the term to its meaning.

1.	to trip	a.	A complete strip-down and reassembly
2.	to reset	b.	To shut down automatically on a fault
3.	purifier	c.	The reason a problem occurs
4.	to isolate	d.	To disconnect from supply and lock off
5.	symptom	e.	Cleans fuel or oil by separation
6.	cause	f.	What can be observed when something is wrong
7.	overhaul	g.	To return a tripped device to ready
8.	planned maintenance	h.	Work carried out before failure occurs

Part 2 - Complete each sentence with one word.

1. The fuel _____ heated before it enters the purifier.
2. The purifier _____ tripped twice today and is still out of service.
3. The alarm _____ up at 0918 and the machine shut down automatically.
4. _____ the pump under the verified authorised procedure; do not open it on a tag alone.
5. An abnormal recorded pressure is a _____ , not proof of a cause.
6. The strainer _____ cleaned and the pump was restarted at 1105.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. Give the four parts of a fault report, in order, and say why the order matters.

2. Explain the difference between "the purifier has tripped" and "the purifier tripped at 0918".

3. Why should a repeated trip be investigated under the authorised procedure rather than repeatedly reset without checks?

Part 4 - Write a machinery fault report.

Choose a machine you know. Write six to eight sentences reporting a fault to a senior engineer. Include the symptom, the time, two checks you carried out with readings, the action you took, and the present status. Use at least two passive forms and one present perfect.

SELF-CHECK

- [ ] I can describe a machine's operation in sequence.
- [ ] I can report a fault in four parts without being prompted.
- [ ] I can say what I have already tried and what the result was.
- [ ] I can tell a symptom from a cause and not confuse them.

NOTES

UNIT 9 SUMMATIVE TEST

Machinery, Faults and Maintenance

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. Of machinery, to shut down automatically on a fault. _____
2. To return a tripped device to the ready condition. _____
3. A machine that cleans fuel or oil by separation. _____
4. To disconnect equipment from supply and lock it off. _____
5. What can be observed when something is wrong. _____
6. The reason the symptom occurs. _____
7. A complete strip-down, inspection and reassembly. _____
8. Work carried out before failure occurs. _____
9. The inlet side of a pump. _____
10. Unwanted shaking of a machine. _____
11. The component supporting a rotating shaft. _____
12. A replacement component held on board. _____
13. Written authorisation for a hazardous job. _____
14. Machinery supporting the main plant, such as a generator. _____

Word bank: auxiliary · bearing · cause · overhaul · permit to work · planned maintenance · purifier · spare part · suction · symptom · to isolate · to reset · to trip · vibration

B. GRAMMAR

one mark each **14 marks**

1. The fuel _____ (heat) before it enters the purifier.
2. The purifier _____ (trip) twice today; it is still out of service.
3. The alarm _____ (come) up at 0918 and the machine shut down.
4. The unit _____ (isolate) and tagged before the strainer was opened.
5. What _____ you already _____ (check)?
6. The bearing _____ (inspect) during the last overhaul, six months ago.
7. The strainer _____ (find) sixty per cent blocked when it was opened.
8. Correct the error: The purifier has tripped at 0918 and shut down.

_____

9. Correct the error: The fuel is heat before it enters the purifier.

_____

10. Correct the error: What have you already checking?

_____

11. Rewrite in the passive: Somebody cleaned the strainer at 1030.

_____

12. Rewrite in the present perfect: The pump stopped. It is still not running.

_____

13. Build a sentence: the strainer / clean / and / the pump / restart / 1105

_____

14. Build a sentence: the unit / isolate / and / tag / before work started

_____

UNIT 9 | T SUMMATIVE ASSESSMENT | READING 14 MARKS

Unit 9 test - reading

At 0918 LT the fuel-oil purifier on MV Coral Star tripped on high outlet temperature, following an earlier reset at 0620. The Fourth Engineer recorded heater outlet temperature 102 °C against a reference of 98 °C, and feed-pump suction pressure 0.8 bar against an earlier 1.2 bar. The Second Engineer did not authorise another reset or opening until the required controls had been verified. After authorised preparation, an inspection found the strainer approximately 60% blocked by a visual estimate. The strainer was cleaned and the joint renewed. Restart was authorised at 1105; outlet temperature was stable at 98 °C at 1305. The record identifies the restriction as a possible contributing factor, but the origin of the debris is not confirmed. The Second Engineer will review the maintenance interval against the manufacturer's guidance and submit a recommendation by 20 March.

Comprehension - 14 marks

Answer all seven questions. Each question carries two marks. Give both details or the answer and reason requested.

1. What alarm occurred, and at what time was the second trip? [2 marks]

2. Give the heater temperature and its reference value, with units. [2 marks]

3. Give the suction pressure and its earlier value, with units. [2 marks]

4. What had to happen before opening, and what was then found? [2 marks]

5. Name two pieces of work recorded after inspection. [2 marks]

6. When was restart authorised, and what temperature was stable at 1305? [2 marks]

7. What remains unconfirmed, and what follow-up is due? [2 marks]

D. WRITING — 12 marks

Choose a machine you know. Write six to eight sentences reporting a fault to a senior engineer: the symptom, the time, two checks with readings, the action taken and the present status. Use at least two passive forms and one present perfect.

E. SPEAKING — 8 marks

assessed by the teacher Report a fault from a card to your teacher, who will act as the Second Engineer. Give all four parts of a fault report without being prompted.

Criterion	2	1	0
Gives symptom, time, checks and action in order	☐	☐	☐
States readings with their units	☐	☐	☐
Keeps symptom and probable cause separate	☐	☐	☐
Agrees a reporting time for the next update	☐	☐	☐

UNIT 10

Incidents, Reports and Handover

Turning what happened into a written record another person can rely on: the near-miss, the injury, the incident report, and the handover that closes the loop.

MODEL COURSE 3.17 LINKAGE

Core Section 1 and 2 - reporting incidents on board, ship's correspondence, handing over a watch.
STCW Table A-II/1 and A-III/1: write reports and records in English; hand over a watch.

O LEARNING OBJECTIVES

tagged with cognitive level

1	Report an incident in chronological order with a time for every event.	APPLY	DECK + ENGINE
2	Separate an observation from an opinion in a written report.	ANALYSE	DECK + ENGINE
3	Write a near-miss report naming the credible worst outcome.	APPLY	DECK + ENGINE
4	Judge whether a draft report would stand up to an external reader.	EVALUATE	DECK + ENGINE

C CAN-DO CHECKLIST

tick when you can do it unaided

- [ ] I can put events in time order with a time on each one.
- [ ] I can write what I saw without saying who was to blame.
- [ ] I can complete a near-miss report in the ship's format.
- [ ] I can hand over an unfinished matter so nothing is lost.

Handover briefing: officers report an incident and pass information on.

CLASS NOTES

A VOCABULARY

study these before you read

Study these terms before reading. Say each one aloud, cover the meaning and check that you can use it in a sentence.

near-miss *n.*
An event that could have caused harm but did not.
e.g. *A near-miss must be reported even when nothing was damaged.*

incident *n.*
An unplanned event that caused or could have caused harm.
e.g. *The incident occurred at 1437 on the mooring deck.*

unsafe act *n.*
Something a person does that creates risk.
e.g. *Working aloft without securing tools is an unsafe act.*

unsafe condition *n.*
A state of equipment or environment that creates risk.
e.g. *The unbarriered area was an unsafe condition.*

credible worst outcome *n.*
The most serious harm that could realistically have resulted.
e.g. *The credible worst outcome would have been a fatal head injury.*

root cause *n.*
An underlying reason established through investigation.
e.g. A final root cause needs investigation; a blank checklist alone is not enough.

corrective action *n.*
A step taken to stop the cause recurring.
e.g. *Corrective action: add the check to the permit by 15 April.*

chronology *n.*
The sequence of events, each with its time.
e.g. *Set out the chronology before you write the narrative.*

observation *n.*
Something seen, measured or heard.
e.g. *Observation: the guard rail was missing on the port side.*

opinion *n.*
A judgement about what an observation means.
e.g. *Keep opinion separate from observation and label it.*

witness *n.*
A person who saw the event.
e.g. *Two witnesses were on the mooring deck at the time.*

to log *v.*
To record formally in a logbook.
e.g. *Log the time the alarm was silenced.*

to strike through *v. phr.*
To draw a single line through an error so it stays legible.
e.g. *Strike through the wrong figure once and initial it.*

handover notes n. pl.
The written record passed from one officer to the next.
e.g. *The handover notes were signed by both officers.*

outstanding work *n.*
Jobs not yet finished, each with an owner and a deadline.
e.g. *Outstanding: strainer inspection, due by 1600.*

to escalate *v.*
To pass a matter to a higher level for a decision.
e.g. *Escalate to the Chief Engineer if the fault repeats.*

QUICK PRACTICE — COVER THE MEANINGS AND ANSWER FROM MEMORY

1. Which two terms must be kept apart in a written report, and why?

2. Which term names what could have happened rather than what did?

3. Write one observation and one opinion about the same event:

NOTES

UNIT 10 | B READING AND LISTENING

A Shackle on the Mooring Deck

The situation
At 1437 LT the Chief Officer begins collecting accounts of a dropped object. The event time and distances are estimates unless stated otherwise.

CHIEF OFFICER Cadet, tell me what you saw and heard. Keep that separate from what you think caused it.

DECK CADET At about 1435 I was by the after bollards. I heard a metallic noise and a shackle landed about two metres from me. It bounced once and stopped near the hatch coaming.

CHIEF OFFICER Where did it land, and what is known about its weight?

DECK CADET Port side, abreast of the number two crane pedestal. The estimate recorded afterwards was about six kilograms. Two ratings were about five metres forward of me.

CHIEF OFFICER Bosun, what were you doing before the object fell?

BOSUN I was greasing the jib sheave. I had two shackles in a bag. I had not secured the bag to the structure. When I moved along the jib, it tipped.

CHIEF OFFICER I will record that as your statement. I cordoned off the area and stopped work aloft at 1437. Cadet, record that confirmed time.

DECK CADET Nobody was injured. Do we still report it?

CHIEF OFFICER Yes. It is a near-miss. A heavy object falling from the estimated fourteen-metre height could have caused a serious or fatal head injury. That is a possible outcome, not an injury that occurred.

BOSUN The permit copy does not include a specific check for securing loose gear.

CHIEF OFFICER That is a finding to investigate alongside the work plan, equipment and supervision. It does not establish a final root cause by itself. I will request a review and hand over the unfinished actions with an owner and deadline.

Original classroom dialogue adapted from the supplied manuscript. Operational data are fictional; this is not a complete operating procedure.

CLASS NOTES

UNIT 10 | B COMPREHENSION AND LANGUAGE IN CONTEXT

Understand the exchange

Read or listen to the dialogue. Answer from what the speakers actually say. Where a question asks why, support your answer with the exchange and the language notes.

Comprehension

1. What happened at about 1435, and how close was the cadet to where the object landed?

2. State the weight of the shackle and the exact place it landed.

3. What was the bosun doing aloft, and what did he fail to do?

4. Why is the event reportable even though nobody was injured?

5. What possible contributing factor needs investigation, and why is a final root cause not yet established?

Language in context

1. "what you saw, not what you think caused it" — find this. What distinction is the Chief Officer drawing?

2. "credible worst outcome" — find this. Why does it decide how serious the report is?

3. How does an attributed statement differ from a confirmed root cause?

4. "outstanding work" — find this at the end. Why does it belong in the handover notes?

Connect the three reading formats
Next, read the written document in B2. Then read the separate B3 article, “A Near Miss Is Information Worth Keeping”. Compare the information you hear with the information a reader can verify.

CLASS NOTES

UNIT 10 | B2 SHIPBOARD DOCUMENT

Near-miss report - facts and analysis

REPORT	NM-24-019 | MV ANDAMAN TRADER
Date / location	4 March, about 1435 LT | port mooring deck, abreast No. 2 crane pedestal
Source of account	Chief Officer; cadet and bosun statements; later record checks
Before the event	Bosun stated that he was greasing the jib sheave with shackles in a bag.
About 1435	Shackle fell from an estimated height of 14 m; weight estimated at 6 kg. Cadet said it landed about 2 m away; two ratings were about 5 m forward.
1437 confirmed	Chief Officer stopped work aloft and cordoned off the area. No injury reported.
Attributed statement	Bosun stated that the bag had not been secured before he moved.
Possible outcome	Serious or fatal head injury - risk assessment, not an observed injury.
Record finding	Permit copy lacks a specific loose-gear securing check.
Cause status	Possible contributing factor identified. Final root cause not established; wider investigation required.
Immediate action	Bosun to maintain the barrier; no resumption without authorisation.
Follow-up	Chief Officer to review the permit and work arrangement by 15 March; record implementation and verification.

Work with the document

1. Identify two observations and one attributed statement.

2. Which line assesses a possible outcome rather than a harm that occurred?

3. Why is the permit finding not enough to establish a final root cause by itself?

4. Write one handover entry with the action, responsible role and deadline.

CLASS NOTES

UNIT 10 | B3 READING FOR MEANING

A Near Miss Is Information Worth Keeping

Before you read
Why might an event without injury still need a written report?

Reading focus: Read evidence, preserve uncertainty and hand over follow-up work.

A A near-miss report records an event that could have caused harm but did not. The absence of an injury does not make the information useless. A useful report helps the next watch understand what happened, what was done and which questions remain. It should also distinguish something seen directly from information received from another person.

B In the fictional scene in Visual Resource 10, a tool falls from a raised platform at approximately 1435 LT. It lands about two metres from a cadet. The cadet sees it land but does not see where it was stored before it fell. Two ratings are nearby. At 1437 the supervisor stops the work and arranges for the area to be kept clear. Nobody is reported injured.

C The person working on the platform later states that the tool bag was not secured. This is recorded as that person's statement, not as something the cadet saw. A review of the permit finds no recorded loose-tool check. This may be a contributing factor, but the report does not declare a final root cause before the wider investigation. Equipment, planning, supervision and the task conditions may all need examination.

D The handover identifies two follow-up actions. The Chief Officer is to review the permit wording by 20 September at 1200 LT. The bosun is to check that the barrier remains in place at 1600 LT today. Each item has an owner and a deadline. When the next officer receives the handover, the officer confirms both actions and asks about any uncertainty. Times described as approximate remain approximate in the written account. A complete record preserves the evidence instead of making it seem more certain than it really is.

Word support

witness statement: an account from a person who saw or heard the event | **contributing factor**: something that may help explain an event | **follow-up**: later work to check or complete an action

Original teaching article; vessel names, people and operational data are fictional. Content/design references: S1, S11; see Sources and editorial notes.

CLASS NOTES

UNIT 10 | B3 COMPREHENSION AND APPLICATION

Read, check and use the information

Answer Questions 1-8 from the article. Short answers are acceptable unless a sentence is requested. For Questions 9-10, use the information to produce your own response. Add the paragraph letter beside each answer to Questions 1-8.

1. What is the article mainly about?

2. How close does the tool land to the cadet?

3. At what time is the work stopped?

4. Who is responsible for reviewing the permit wording?

5. What does contributing factor mean?

6. What does both actions refer to in paragraph D?

7. Which information is a witness statement rather than something the cadet directly saw?

8. Why should the report not declare a final root cause at this stage?

9. Write the bosun's outstanding action with its deadline.

10. Write two chronology entries, preserving the stated uncertainty.

Self-check: Did I use the text as evidence? Did I keep figures and units accurate? Did I avoid inventing missing facts?

CLASS NOTES

UNIT 10 | C GRAMMAR - FORMS AND MEANING

Past tenses and reported speech

An incident account distinguishes an activity in progress, a completed event and an earlier event. Reported speech identifies whose account is being recorded. Keep the wording neutral and preserve any uncertainty in the source statement.

Meaning	Form	Example
Background action	was/were + verb-ing	The bosun was greasing the sheave when the bag tipped.
Completed event	past simple	A shackle landed near the cadet.
Earlier past event	had + past participle	He had not secured the bag before he moved.
Attributed statement	said/stated/reported + that clause	The bosun stated that he had not secured the bag.
Passive action	was/were + past participle	The area was cordoned off at 1437.
Uncertain detail	about / approximately / not recorded	The witness estimated the time as about 1435.

When and while connect events

I was checking the deck when the tool fell: an action in progress and an interrupting event. While often introduces a continuing background action, but the conjunction alone does not mechanically determine the tense.

Backshift where the reporting context requires it

Direct: “I did not secure the bag.” Reported: The worker said that the bag had not been secured. Change pronouns and time references carefully. Backshift is common in past accounts, but not compulsory when the original statement remains true and the context supports retaining its tense.

Do not invent evidence to replace blame

The worker was careless is an evaluation, not a description of what was seen. Replace it only with an observation or an attributed statement actually supplied. A blank checklist is a finding; it does not, by itself, establish every underlying cause.

Examples are for language learning. Sources: S1; see editorial notes.

CLASS NOTES

UNIT 10 | C GRAMMAR - STUDY, THEN PRACTISE

Examples and controlled practice

Check a common error
Incorrect: The ratings was working. Correct: The ratings were working. Incorrect: He did not secured the bag. Correct: He did not secure the bag.

Study the examples

1. Two ratings were standing nearby when the tool fell.

2. The Chief Officer stopped work at 1437.

3. The bosun stated that he had not secured the bag.

4. A final cause had not been established when the report was filed.

Activity A - complete the sentences

Use the form requested. Write the full verb phrase when needed. Read your answer in the complete sentence.

1. The bosun _____ (grease) the sheave when the bag tipped.

2. A shackle _____ (land) near the cadet.

3. Use past perfect: He _____ (not secure) the bag before he moved.

4. Use past reporting and backshift: The bosun _____ (state) that he _____ (not secure) the bag.

5. Use past passive: The area _____ (cordon off) at 1437.

6. Two ratings _____ (work) nearby when the object fell.

Self-check: subject-verb agreement; complete verb phrase; clear time reference; accurate units.

CLASS NOTES

UNIT 10 | C2 ACTIVITIES B AND C

More practice: transform and correct

Worked example - not one of the questions
Report the statement: The cadet said, “I saw the tool fall.” -> The cadet said that they had seen the tool fall.

Activity B - rewrite as instructed

1. Join using when: I was at the after bollards. I heard a metallic noise.

2. Report the direct statement using said and past perfect: The bosun said, “I did not secure the bag.”

3. Join using past perfect: He moved along the jib. He did not secure the bag first.

4. Use passive: The Chief Officer cordoned off the area at 1437.

5. Replace “The bosun was careless” using this supplied statement only: The bosun said, “I did not secure the bag.”

Activity C - correct the message

Write the whole corrected sentence. Some items ask for a change of function; others contain one or more form errors.

1. The bosun was grease the jib sheave when the bag tipped.

2. He didn't secured the bag before he moved along the jib.

3. The bosun stated that he had not secure the bag.

4. The area was cordon off at 1437 and all work aloft stopped.

5. Two ratings was working five metres forward when the object fell.

CLASS NOTES

UNIT 10 | C2 ACTIVITIES D AND E

More practice: build and produce

Worked example
crew / inspect / deck / when / alarm / sound -> The crew were inspecting the deck when the alarm sounded.

Activity D - build complete sentences

Add articles, prepositions and complete verb phrases where needed. Use the grammar of this unit and keep all supplied facts.

1. the bosun / grease / the jib sheave / when / the bag / tip

2. a shackle / land / two metres / from the cadet

3. he / not secure / the bag / before / he / move along the jib

4. the bosun / state / that / he / not secure / the bag

5. the area / cordon off / 1437 / and / all work aloft / stop

Activity E - your turn

Use the fictional evidence in Visual Resource 10. Write a chronology of six entries, retaining approximate times where stated. Then write three observations and one clearly labelled possible contributing factor. Do not present an unconfirmed root cause as a finding.

D SPEAKING PRACTICE

threes, statement taking

Take a statement from a witness without leading them, then read back what you have written and get their agreement. This is the conversation behind every incident report, and it must stay factual.

PHRASE BANK - USE AT LEAST FOUR OF THESE

- Tell me what you saw, not what you think caused it.
- How far were you from it?
- I did not see that, sir.
- Is that a correct record?
- What time was that, as near as you can say?
- Was anyone else present?
- Let me read that back to you.
- I will record that as your observation.

D HOW TO RUN THE TASK

follow the steps in order

1. The witness reads the card silently. The officer must not see it.
2. The officer takes the statement using open questions only.
3. The recorder writes it down and marks any opinion.
4. The officer reads the statement back; the witness confirms or corrects.
5. The recorder reports how many opinions crept in and who introduced them.
6. Rotate roles with a new card. Try to reduce opinions to zero.

ACTIVITY - AFTER YOU HAVE SPOKEN

1. How many opinions crept into the statement, and who introduced them?

2. Rewrite one opinion from your statement as a pure observation.

3. Which open question produced the most useful information? Write it out.

NOTES

Use the supplied Visual Resource 10 pages in this unit. Classroom tasks only; follow authorised procedures in practice.

UNIT 10 | E FINAL INTEGRATING LANGUAGE TASK

From evidence to report to handover

Materials and safety
Use the four-frame storyboard and witness cards in Resources 10a-10b. Do not stage a real falling object, work at height or unsafe act. The storyboard supplies the evidence and the approximate/confirmed times.

1. Study the storyboard once, then note the events. Read the evidence cards to verify your memory; use the supplied times, not guessed exact times.

2. Compare accounts. Mark a difference as uncertain until the source resolves it. An estimate must stay an estimate.

3. Interview the witness using open questions. Identify what the witness saw, what someone else said and what was checked later.

4. Complete the near-miss form: chronology, observations, attributed statements, possible outcome, known findings, cause status and follow-up.

5. Write the handover entry with the outstanding action, responsible person and deadline. Distinguish an assigned action from a completed action.

6. Exchange reports. The receiving group checks the evidence and asks for any genuinely missing information. Revise the report after feedback.

Observer check	Yes / partly / not yet
Uses recorded times and labels approximations	
Keeps direct observation separate from witness statements	
Uses past simple/continuous and reported speech clearly	
Does not label an unconfirmed root cause as established	
Records potential outcome separately from actual harm	
Hands over an owner, action and deadline	

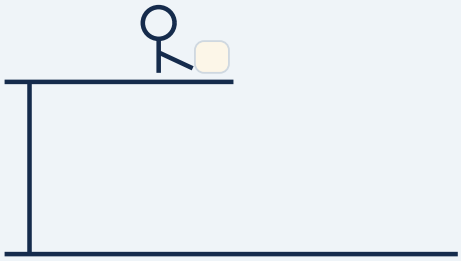

1. Write one uncertainty that should be preserved in a factual report.

UNIT 10 | VISUAL AND PRACTICAL RESOURCE

From event to evidence: four frames

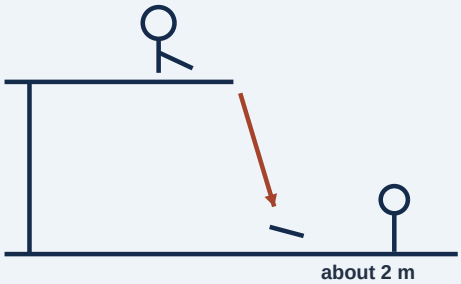

Study the invented storyboard. The images show a sequence; they do not prove an unseen cause. Read the witness cards on V10b separately. Do not stage a falling-object event with real objects.

1433 LT

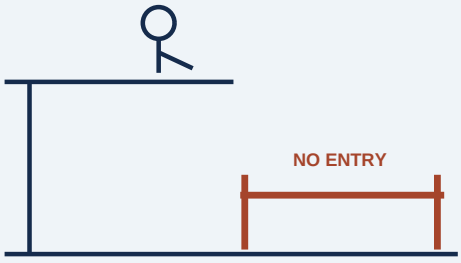

Work in progress on a platform.

Approx. 1435 LT

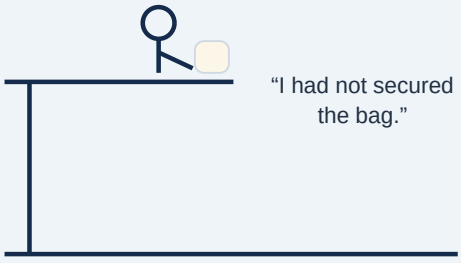

A tool falls near the cadet.

1437 LT

Work stopped; area kept clear.

Later statement

Worker reports an unsecured bag.

V10.1. Write two observable events and one attributed statement.

EVIDENCE CHECK
A picture can show the tool falling or the area being barriered. It cannot prove a final root cause. Do not turn an illustration into an inspection finding.

UNIT 10 | VISUAL AND PRACTICAL RESOURCE

Witness cards and a near-miss form

FOUR SEPARATE SOURCES
Cadet: At approximately 1435 I saw a tool land about two metres from me. I did not see where it was stored.
Worker: I had not secured the tool bag before moving.
Supervisor: At 1437 I stopped the work and arranged to keep the area clear. No injury was reported.
Document review: No loose-tool check is recorded on the permit copy. Wider investigation is incomplete.

Report field	Your evidence-based entry
Time and place	
Chronology: preserve approximate times	
Direct observations	
Attributed statements	
Potential consequence	
Analysis: confirmed / possible / not established	

Handover: owner, action and deadline

Owner	Action	Deadline
Chief Officer	Review permit wording.	20 September, 1200 LT
Bosun	Check barrier remains in place.	1600 LT today

Original fictional training case, dated 19 September 2026 for this handover card. Final root cause is not established. Never replace a real investigation with this model.

NAME: _____ **CLASS:** _____ **DATE:** _____

F WORKSHEET

complete without looking back

Part 1 - Match the term to its meaning.

1.	near-miss		a. A state of equipment that creates risk
2.	unsafe act		b. An underlying reason found through investigation
3.	unsafe condition		c. An event that could have caused harm but did not
4.	credible worst outcome		d. Jobs not yet finished, with owner and deadline
5.	root cause		e. Something a person does that creates risk
6.	corrective action		f. The sequence of events, each with its time
7.	chronology		g. A step taken to stop the cause recurring
8.	outstanding work		h. The most serious harm that could realistically have resulted

Part 2 - Complete each sentence with one word.

1. The bosun _____ greasing the jib sheave when the bag tipped.
2. A shackle _____ about two metres from where the cadet was standing.
3. The area _____ cordoned off at 1437 and all work aloft was stopped.
4. A _____ must be reported even when nothing was damaged.
5. The bosun _____ that he had not secured the bag to the structure.
6. Keep _____ separate from opinion, and label each one clearly.

NOTES

F WORKSHEET (CONTINUED)

complete without looking back

Part 3 - Answer in one or two full sentences.

1. Why is the credible worst outcome recorded rather than only what actually happened?

2. Use the supplied bosun statement to replace the unsupported judgement: "The bosun was careless."

3. What three things must every item of outstanding work in a handover note contain?

Part 4 - Write a complete near-miss report.

Using the incident in the reading passage, write a full near-miss report: a chronology with times, three observations, the credible worst outcome, the attributed act, the cause status, and one follow-up action with an owner and a deadline. Keep every opinion clearly labelled as such.

SELF-CHECK

- [ ] I can put events in time order with a time on each one.
- [ ] I can write what I saw without saying who was to blame.
- [ ] I can complete a near-miss report in the ship's format.
- [ ] I can hand over an unfinished matter so nothing is lost.

NOTES

UNIT 10 SUMMATIVE TEST

Incidents, Reports and Handover

Time: 55 minutes

Total: 62 marks

NAME: _____ **CLASS:** _____ **SCORE:** _____

A. VOCABULARY

one mark each **14 marks**

1. An event that could have caused harm but did not. _____
2. Something a person does that creates risk. _____
3. A state of equipment or environment that creates risk. _____
4. The most serious harm that could realistically have resulted. _____
5. An underlying reason established through investigation. _____
6. A step taken to stop the cause recurring. _____
7. The sequence of events, each with its time. _____
8. Something seen, measured or heard. _____
9. A judgement about what an observation means. _____
10. Jobs not yet finished, each with an owner and a deadline. _____
11. A person who saw the event. _____
12. To record formally in a logbook. _____
13. The written record passed from one officer to the next. _____
14. To pass a matter to a higher level for a decision. _____

Word bank: chronology · corrective action · credible worst outcome · handover notes · near-miss · observation · opinion · outstanding work · root cause · to escalate · to log · unsafe act · unsafe condition · witness

B. GRAMMAR

one mark each **14 marks**

1. The bosun _____ (grease) the jib sheave when the bag tipped.
2. A shackle _____ (land) about two metres from the cadet.
3. He _____ (not secure) the bag before he moved along the jib.
4. The bosun _____ (state) that he _____ (not secure) the bag.
5. The area _____ (cordon off) at 1437 and all work aloft was stopped.
6. Two ratings _____ (work) five metres forward when the object fell.
7. The Chief Officer _____ (already write) the report before he went off watch.
8. Correct the error: The bosun was grease the jib sheave when the bag tipped.

_____

9. Correct the error: He didn't secured the bag before he moved along the jib.

_____

10. Correct the error: The area was cordon off at 1437 and all work aloft stopped.

_____

11. Report this statement: The bosun said, "I did not secure the bag."

_____

12. Use the bosun's supplied statement to replace "The bosun was careless with his tools."

_____

13. Build a sentence: two ratings / work / five metres forward / when / the object / fall

_____

14. Build a sentence: the bosun / state / that / he / not secure / the bag

_____

UNIT 10 | T SUMMATIVE ASSESSMENT | READING 14 MARKS

Unit 10 test - reading

At about 1435 LT on 4 March, a spanner of approximately two kilograms fell about eleven metres from a platform on No. 3 crane. An able seaman was working at the hatch coaming roughly three metres from the landing point. No injury was reported. The fitter stated that he had placed the spanner on the platform edge without securing it. At 1438 the Chief Officer stopped work aloft and the bosun cordoned off the area. A check of the permit copy found no specific loose-tool securing check. The Chief Officer recorded a serious or fatal head injury as a credible possible outcome. The initial report did not establish a final root cause. The Chief Officer was assigned to review the permit and work arrangement by 18 March at 1200 LT. Work would not resume without the required authorisation.

Comprehension - 14 marks

Answer all seven questions. Each question carries two marks. Give both details or the answer and reason requested.

1. Give the estimated weight and falling distance. [2 marks]

2. How far was the seaman from the landing point, and was injury reported? [2 marks]

3. What did the fitter state, and how should that source be identified? [2 marks]

4. What happened at 1438? Name two actions. [2 marks]

5. What was found on the permit copy, and does that establish a final root cause? [2 marks]

6. What potential outcome was recorded, and how is it different from the actual outcome? [2 marks]

7. Who owns the review, and when is it due? [2 marks]

D. WRITING — 12 marks

Using the incident above, write a full near-miss report: a chronology with times, three observations, the credible worst outcome, the attributed act, the cause status, and one follow-up action with an owner and a deadline. Label any opinion clearly as an opinion.

E. SPEAKING — *assessed by the teacher* — 8 marks

Take a statement from your teacher, who will act as a witness. Use open questions only and read your written statement back for confirmation.

Criterion	2	1	0
Asks open questions and does not suggest a cause	☐	☐	☐
Asks for times, distances and weights	☐	☐	☐
Reads the statement back and seeks confirmation	☐	☐	☐
Keeps observation separate from opinion	☐	☐	☐

END OF COURSE | UNITS 1-10 | STUDENT PAPER

Final Summative Assessment

FIRST EDITION 2026

Deck and Engine Cadets

150 short-response items and four performance tasks. Total: **240 marks**. Complete all seven sections. No multiple-choice questions are used.

Section	Items / tasks	Marks	Suggested time
A Listening	1-30 (30 items)	30	30 min
B Vocabulary	31-70 (40 items)	40	25 min
C Reading	71-100 (30 items)	60	60 min
D Grammar and accuracy	101-140 (40 items)	40	35 min
E Visual information	141-150 (10 items)	10	15 min
F Writing	151-152 (2 tasks)	40	50 min
G Speaking	153-154 (2 tasks)	20	12 min separately
TOTAL	150 short items + 4 tasks	240	215 min + oral

Candidate details

Name: _____

Student number: _____ Class / department: _____

Date: _____ Assessor: _____

Administration plan
Suggested administration: Session 1, Sections A-C (115 minutes); Session 2, Sections D-F (100 minutes), with a break between sessions. Speaking is assessed individually in a separate session. These timings should be piloted with the class.

READ BEFORE YOU BEGIN

Instructions and marking information

1. Answer every item and both writing and speaking tasks. Write legibly. Use numerals for data unless you are asked to write words.

2. Section A: your invigilator will read or play five scripts. Each is delivered twice. Read the six questions before each script. You may take notes. The student paper does not contain the scripts.

3. Sections B, D and E: one mark per numbered item. Give the term, completed form or rewritten sentence requested. Where two blanks form one verb phrase, both parts are required for the mark.

4. Section C: two marks per numbered item. Supply both requested details, or a conclusion and its supporting reason. Use the printed text only. Write “not stated” or “not confirmed” when that is the information given.

5. Section F: complete two different writing tasks. Use the supplied facts; keep estimates approximate and do not invent a cause. The word ranges guide the amount of detail. Headings and sign-off do not count toward the word range.

6. Section G: there are two oral tasks, each worth ten marks. You have two minutes to prepare and four minutes to perform each task. Use a closed classroom simulation only.

7. A simple calculator is allowed for arithmetic in Section C. Dictionaries, phones, course notes and external reference materials are not allowed during the test.

8. This is a language assessment, not certification to operate machinery, fight fires, handle dangerous goods or transmit on a live radio. The scenarios and supplied operational data are fictional.

How extended tasks are marked

Writing: task completion, factual accuracy, organisation/register, and language/mechanics (four criteria, 0-5 each). Speaking: five task-specific criteria, 0-2 each. Full descriptors and examiner materials are in the separate teacher copy.

Published end-of-course assessment. For secure high-stakes use, the institution should administer an unseen parallel form and approve its pass criteria. No CEFR-equivalence claim is made.

SECTION A | 6 ITEMS PER SCRIPT | 1 MARK EACH

Listening 1: Joining and familiarisation

Read the questions. Listen twice. Write one short answer for each item. Include the unit or time standard when it is requested.

1. What is the cadet's training role? [1 mark]

2. Which officer does the cadet report to? [1 mark]

3. What is the cabin number? [1 mark]

4. At what time does familiarisation start? [1 mark]

5. Where does the familiarisation meeting begin? [1 mark]

6. What is the muster station letter/name? [1 mark]

Listening notes (not marked)

SECTION A | 6 ITEMS PER SCRIPT | 1 MARK EACH

Listening 2: VHF clarification and corrected ETA

Read the questions. Listen twice. Write one short answer for each item. Include the unit or time standard when it is requested.

7. Write the vessel's name. [1 mark]

8. Write the call sign in letters and numerals. [1 mark]

9. What working channel is assigned? [1 mark]

10. What readability is reported at first contact? [1 mark]

11. What is the vessel's draft? [1 mark]

12. What is the corrected ETA, in local time? [1 mark]

Listening notes (not marked)

SECTION A | 6 ITEMS PER SCRIPT | 1 MARK EACH

Listening 3: Distress information

Read the questions. Listen twice. Write one short answer for each item. Include the unit or time standard when it is requested.

13. Which priority signal is used? [1 mark]

14. Write the reported latitude with its hemisphere. [1 mark]

15. Write the reported longitude with its hemisphere. [1 mark]

16. What UTC time is attached to the position? [1 mark]

17. Which compartment is flooding? [1 mark]

18. How many persons are on board? [1 mark]

Listening notes (not marked)

SECTION A | 6 ITEMS PER SCRIPT | 1 MARK EACH

Listening 4: Mooring communication

Read the questions. Listen twice. Write one short answer for each item. Include the unit or time standard when it is requested.

19. Which side of the vessel is alongside? [1 mark]

20. What is the berth number? [1 mark]

21. How many tugs are made fast? [1 mark]

22. Which line is under heavy strain? [1 mark]

23. At what time is the aft station all fast? [1 mark]

24. At what time are both stations all fast? [1 mark]

Listening notes (not marked)

SECTION A | 6 ITEMS PER SCRIPT | 1 MARK EACH

Listening 5: Machinery status and follow-up

Read the questions. Listen twice. Write one short answer for each item. Include the unit or time standard when it is requested.

25. Which pump stopped? [1 mark]

26. At what time did it stop? [1 mark]

27. What alarm was displayed? [1 mark]

28. What was the discharge pressure at 1120? [1 mark]

29. Which standby pump is available? [1 mark]

30. When is the next status report due? [1 mark]

Listening notes (not marked)

SECTION B | 10 ITEMS ON THIS PAGE | 1 MARK EACH

Vocabulary 1 of 4

Write the maritime term that matches each definition. Use each term in the box once.

Word bank
familiarisation | rounds | heading | call sign | forecastle | alleyway | bosun | swell | readability | latitude

31. The ship-specific introduction needed before a new joiner undertakes assigned duties. [1 mark]

32. The senior rating of the deck department. [1 mark]

33. A passage or corridor inside the accommodation. [1 mark]

34. The forward deck area where anchoring equipment is located. [1 mark]

35. A scheduled inspection walk through machinery spaces. [1 mark]

36. The direction in which the vessel's bow is pointing. [1 mark]

37. Angular distance north or south of the equator. [1 mark]

38. Waves that have travelled away from the area where they were generated. [1 mark]

39. The vessel's identifying group of letters and/or figures used in radio communication. [1 mark]

40. How clearly a received radio message can be understood. [1 mark]

SECTION B | 10 ITEMS ON THIS PAGE | 1 MARK EACH

Vocabulary 2 of 4

Write the maritime term that matches each definition. Use each term in the box once.

Word bank
bight | windlass | dunnage | overhaul | ullage | muster list | witness | symptom | survival craft | chronology

41. The document assigning emergency duties and assembly stations. [1 mark]

42. A lifeboat or liferaft intended to support survival after leaving a vessel. [1 mark]

43. The machine used to raise and lower an anchor. [1 mark]

44. A loop or curved part of a rope. [1 mark]

45. Material placed under or between cargo to protect or support it. [1 mark]

46. The measured distance from a tank reference point down to the liquid surface. [1 mark]

47. An observable sign that equipment is not operating normally. [1 mark]

48. A major strip-down, inspection and reassembly of equipment. [1 mark]

49. A record of events arranged in the order in which they happened. [1 mark]

50. A person who saw or heard an event. [1 mark]

SECTION B | 10 ITEMS ON THIS PAGE | 1 MARK EACH

Vocabulary 3 of 4

Complete each sentence with the appropriate word or phrase from the box. Use each entry once.

Word bank
OUT | escape route | ETA | handover | RPM | visibility | standing orders | Chief Engineer | starboard | CORRECTION

51. The _____ is the head of the engine department. [1 mark]

52. The outgoing and incoming officers signed the _____ record after discussing the unfinished work. [1 mark]

53. When you face the bow, the right-hand side of the vessel is _____. [1 mark]

54. Never leave stores in an _____; people may need that way out in an emergency. [1 mark]

55. The display shows 70 _____, meaning seventy revolutions per minute. [1 mark]

56. The Master's _____ give continuing instructions for watchkeepers. [1 mark]

57. Our _____ at the pilot station is 1830 LT; that is when we expect to arrive. [1 mark]

58. Rain reduced the _____ to two nautical miles. [1 mark]

59. To replace a figure that you have just said incorrectly, begin with _____. [1 mark]

60. The exchange is finished and no reply is expected: Harbour Control _____. [1 mark]

SECTION B | 10 ITEMS ON THIS PAGE | 1 MARK EACH

Vocabulary 4 of 4

Complete each sentence with the appropriate word or phrase from the box. Use each entry once.

Word bank
loading rate | segregation | near-miss | persons on board | all fast | spare part | outstanding work | PAN-PAN | single up | planned maintenance

61. The priority signal for an urgent safety message below distress level is _____. [1 mark]

62. The total headcount is 22 _____, including everyone aboard. [1 mark]

63. Both stations have secured their assigned mooring lines. The vessel is _____. [1 mark]

64. Before the departure sequence, the order to reduce the moorings to the specified minimum is _____. [1 mark]

65. Keeping incompatible dangerous goods apart according to the applicable requirements is _____. [1 mark]

66. Cargo is coming aboard at 650 tonnes per hour. That figure is the _____. [1 mark]

67. The replacement bearing held in the store is a _____. [1 mark]

68. Scheduled servicing in the PMS is part of the vessel's _____ programme. [1 mark]

69. A tool fell close to a rating but caused no injury or damage. The event is recorded as a _____. [1 mark]

70. The inspection is not finished. It must be entered under _____, with an owner and deadline. [1 mark]

SECTION C | READ THE STIMULUS, THEN ANSWER THE QUESTIONS

Reading 1 - A changed arrival plan

A At 0800 LT on 21 September, MV Meadow Bay has 84 nautical miles to run to the pilot station. The planning speed is 12 knots. With no delay and that speed maintained along the remaining route, the planned arrival is 1500 LT. The Officer of the Watch writes the position time and the ETA in different fields so that neither can be mistaken for the other.

B At 0900, the latest forecast warns of reduced visibility between 1100 and 1400. The present visibility is still six nautical miles. The Master arranges a review at 1000 and asks the engine room to report readiness at 0945. These are planned actions; they are not statements that visibility has already fallen or that speed has already changed.

C The engine handover contains a separate item. No. 2 fresh-water pump is unavailable for inspection. No. 1 is operating normally, and the Chief Engineer reports that this defect does not restrict propulsion in this case. The inspection is assigned to the Second Engineer, with an update due at 1030. The incoming engineer repeats the pump number and reporting time.

D At 1000 the Master approves a changed arrival plan after checking current conditions. The Officer of the Watch informs the pilot station and records the new instructions. A newly joined cadet helps enter the information after completing the required familiarisation and under supervision. When the cadet is unsure whether a time is local or UTC, the cadet asks. A complete record separates observed conditions, forecasts, current equipment status and future actions.

Reading reminder
Use this page as evidence. Do not add technical explanations, permissions or causes that the text does not give.

Original fictional assessment text. Supplied case-specific instructions are not regulatory extracts.

SECTION C | 8 ITEMS | 2 MARKS EACH

Reading 1 - A changed arrival plan - questions

Give both details or the answer and reason requested. Short, clear sentences or phrases are acceptable.

71. State the remaining distance at 0800 and the planning speed. [2 marks]

72. Show why the original planned arrival is 1500 LT. [2 marks]

73. Give the forecast period for reduced visibility and the visibility still observed at 0900. [2 marks]

74. Who requests the readiness report, and when is it due? [2 marks]

75. Which pump is unavailable, and who is assigned the inspection? [2 marks]

76. Explain why the pump defect should not be described as an engine failure in this account. [2 marks]

77. Identify two actions that help prevent a misunderstood time or figure. [2 marks]

78. Give a suitable main heading and one reason for your choice. [2 marks]

SECTION C | READ THE STIMULUS, THEN ANSWER THE QUESTIONS

Reading 2 - A discrepancy before loading

A During an invented port operation, a terminal presents 60 cargo units for MV Green Cape. At 1320 LT the checking team has verified 42 units. The remaining 18 are still awaiting checks; they are not automatically defective. The Chief Officer asks the team to report confirmed problems separately from work that has not yet been completed.

B One of the checked units, C18, has an unreadable required placard. Its unit number matches the transport document, which identifies Class 3 cargo. The cadet records the unreadable placard and cites the document. The cadet does not identify the substance by guessing from the torn symbol. The Chief Officer holds C18 pending verification and requests corrected information from the terminal.

C A second discrepancy concerns a written instruction supplied for this classroom case. It requires Units C18 and O25 to be in separate numbered bays, but the draft plan places both in Bay 08. This is an exercise-specific cargo officer's instruction, not an extract from an IMDG segregation table. The students must use the instruction to find the plan conflict, not treat it as a general rule for every cargo in those classes.

D At 1355 the terminal sends a revised plan. The Chief Officer checks the changes before accepting it. The cargo record lists the affected units, the observed problem, the action taken and any matter still waiting for confirmation. The rest of the operation is reviewed under the vessel's procedures; students must not infer permission for unaffected work merely because it is not mentioned. Clear reporting avoids turning unchecked information into either a confirmed defect or a confirmed safe condition.

Reading reminder
Use this page as evidence. Do not add technical explanations, permissions or causes that the text does not give.

Original fictional assessment text. Supplied case-specific instructions are not regulatory extracts.

SECTION C | 8 ITEMS | 2 MARKS EACH

Reading 2 - A discrepancy before loading - questions

Give both details or the answer and reason requested. Short, clear sentences or phrases are acceptable.

79. How many units are presented, and how many have been verified by 1320? [2 marks]

80. How many units await checks, and does that mean they are defective? [2 marks]

81. Identify the problem on C18 and the source that gives its cargo class. [2 marks]

82. State the plan conflict using both unit identifiers and the bay number. [2 marks]

83. Why must the supplied separation instruction not be applied as a universal IMDG rule? [2 marks]

84. When does the revised plan arrive, and who checks it? [2 marks]

85. What does both refer to in paragraph C, and what does verified mean in paragraph A? [2 marks]

86. Name two kinds of information the cargo record should preserve. [2 marks]

SECTION C | READ THE STIMULUS, THEN ANSWER THE QUESTIONS

Reading 3 - A maintenance status record

Vessel / reference	MV Maple Sound / WO-26-062
Equipment	Fresh-water transfer pump P4
Reported symptom	Stopped at 0742 LT; motor overload alarm displayed.
Comparison reading	At 0735, discharge pressure was 2.9 bar during the stable run.
External check	At 0745, no visible leak; no internal inspection carried out.
Authorisation status	At 0800, isolation verification is NOT signed. No opening of equipment is authorised.
Present status	P4 out of service. Pump P1 is running normally.
Cause	Not confirmed.
Responsible officer	Second Engineer
Next update	0900 LT today
Record prepared	Fourth Engineer / 0805 LT / 22 September 2026

Reading reminder
Use this page as evidence. Do not add technical explanations, permissions or causes that the text does not give.

Original fictional assessment text. Supplied case-specific instructions are not regulatory extracts.

SECTION C | 7 ITEMS | 2 MARKS EACH

Reading 3 - A maintenance status record - questions

Give both details or the answer and reason requested. Short, clear sentences or phrases are acceptable.

87. Identify the pump and the time it stopped. [2 marks]

88. What alarm is recorded, and what comparison pressure is given? [2 marks]

89. What was observed externally, and what inspection has not happened? [2 marks]

90. State whether opening is authorised and give the recorded reason. [2 marks]

91. Give the present status of P4 and P1. [2 marks]

92. Who is responsible for the follow-up, and when is the next update due? [2 marks]

93. Is “a blocked strainer caused the trip” supported by this record? Explain. [2 marks]

SECTION C | READ THE STIMULUS, THEN ANSWER THE QUESTIONS

Reading 4 - A near-miss and follow-up record

Vessel / reference	MV Ash Bay / NM-26-031
Date / place	23 September 2026 / port side, aft working deck
Witness observation	At approximately 1415 LT, a small metal tool fell from a raised platform and landed about 3 m from a rating.
Outcome	No injury or damage reported.
Immediate response	1417 LT: work stopped and the area was barriered.
Worker's statement	The tool bag had not been secured before the worker moved.
Document review	No loose-tool check recorded on the permit copy reviewed.
Analysis status	Possible contributing factors under review; final root cause NOT established.
Action 1	Bosun: check barrier at 1500 LT today.
Action 2	Chief Officer: review permit checklist by 25 September, 1200 LT.
Potential outcome	Serious injury from a falling tool.
Prepared by	Second Officer / 1440 LT

Reading reminder
Use this page as evidence. Do not add technical explanations, permissions or causes that the text does not give.

Original fictional assessment text. Supplied case-specific instructions are not regulatory extracts.

SECTION C | 7 ITEMS | 2 MARKS EACH

Reading 4 - A near-miss and follow-up record - questions

Give both details or the answer and reason requested. Short, clear sentences or phrases are acceptable.

94. State the approximate event time and distance from the rating. [2 marks]

95. Give the two immediate actions at 1417. [2 marks]

96. Which person says the bag was unsecured, and is this presented as the rating's direct observation? [2 marks]

97. Give one document-review finding and the status of the root cause. [2 marks]

98. State Action 1 with its responsible person and deadline. [2 marks]

99. State Action 2 with its responsible person and deadline. [2 marks]

100. Why should the time remain approximate, and why is the event still worth reporting? [2 marks]

SECTION D | 10 ITEMS ON THIS PAGE | 1 MARK EACH

Grammar and accuracy 1 of 4

Follow the instruction in each item. For a correction or transformation, write the complete sentence. A requested target form is not a claim that every alternative form is wrong.

101. The Second Engineer _____ (check) the training record every Friday. [1 mark]

102. Use the negative present simple: The cadet works alone. [1 mark]

103. Complete the question: Who _____ the engine cadet report to? [1 mark]

104. Correct the verb: The Chief Officer are responsible for the deck department. [1 mark]

105. Complete: There _____ two fire stations on this training plan. [1 mark]

106. Complete the phrase: The workshop is next _____ the control room. [1 mark]

107. Use above and keep the meaning: The messroom is below the cabins. [1 mark]

108. Correct the preposition: The muster station is in the port side. [1 mark]

109. Use the present continuous: The engineer _____ (inspect) the panel now. [1 mark]

110. Use the present simple: The engineer _____ (make) rounds every morning. [1 mark]

SECTION D | 10 ITEMS ON THIS PAGE | 1 MARK EACH

Grammar and accuracy 2 of 4

Follow the instruction in each item. For a correction or transformation, write the complete sentence. A requested target form is not a claim that every alternative form is wrong.

111. Make a question: The generator is running. [1 mark]

112. Correct the verb phrase: I am knowing the standing orders. [1 mark]

113. Use will for an immediate offer: I _____ (call) the pilot station now. [1 mark]

114. Use going to: We _____ (check) the deck, as agreed at the morning briefing. [1 mark]

115. Use present continuous to emphasise the arrangement: The inspector will arrive at 1000 tomorrow. [1 mark]

116. Correct the verb form: The visibility will improves after the shower. [1 mark]

117. Give a direct order using switch: _____ to Channel one two. [1 mark]

118. Complete the negative order: Do not _____ (enter) the fairway yet. [1 mark]

119. Rewrite as a request using May I: Enter the fairway now. [1 mark]

120. Correct the verb form: I request to entering the anchorage. [1 mark]

SECTION D | 10 ITEMS ON THIS PAGE | 1 MARK EACH

Grammar and accuracy 3 of 4

Follow the instruction in each item. For a correction or transformation, write the complete sentence. A requested target form is not a claim that every alternative form is wrong.

121. Use past passive: The general alarm _____ (sound) at 0214. [1 mark]

122. Complete the present status: All personnel _____ accounted for. [1 mark]

123. Rewrite as a prohibition using Do not: Enter the space. [1 mark]

124. Correct the participle: The beacon has been activate. [1 mark]

125. Use present continuous for an action now: The team _____ (slack) away the spring. [1 mark]

126. Complete the report: Both stations _____ all fast. [1 mark]

127. Write a warning beginning Warning: The forward spring is under heavy strain. [1 mark]

128. Correct the plural: Two stern line are fast. [1 mark]

129. Complete the quantity question: How _____ cargo remains? [1 mark]

130. Complete with fewer or less: We have _____ containers than yesterday. [1 mark]

SECTION D | 10 ITEMS ON THIS PAGE | 1 MARK EACH

Grammar and accuracy 4 of 4

Follow the instruction in each item. For a correction or transformation, write the complete sentence. A requested target form is not a claim that every alternative form is wrong.

131. Rewrite using items of: There are three equipments in the locker. [1 mark]

132. Correct the quantifier: We discharged fewer ballast water than planned. [1 mark]

133. Use present perfect: The pump _____ (stop) twice today; it remains unavailable. [1 mark]

134. Use past simple: The alarm _____ (sound) at 0742 yesterday. [1 mark]

135. Rewrite in the passive: The engineer cleaned the strainer at 1100. [1 mark]

136. Correct the participle: The unit has been isolate. [1 mark]

137. Use past continuous: The rating _____ (walk) along the deck when the tool fell. [1 mark]

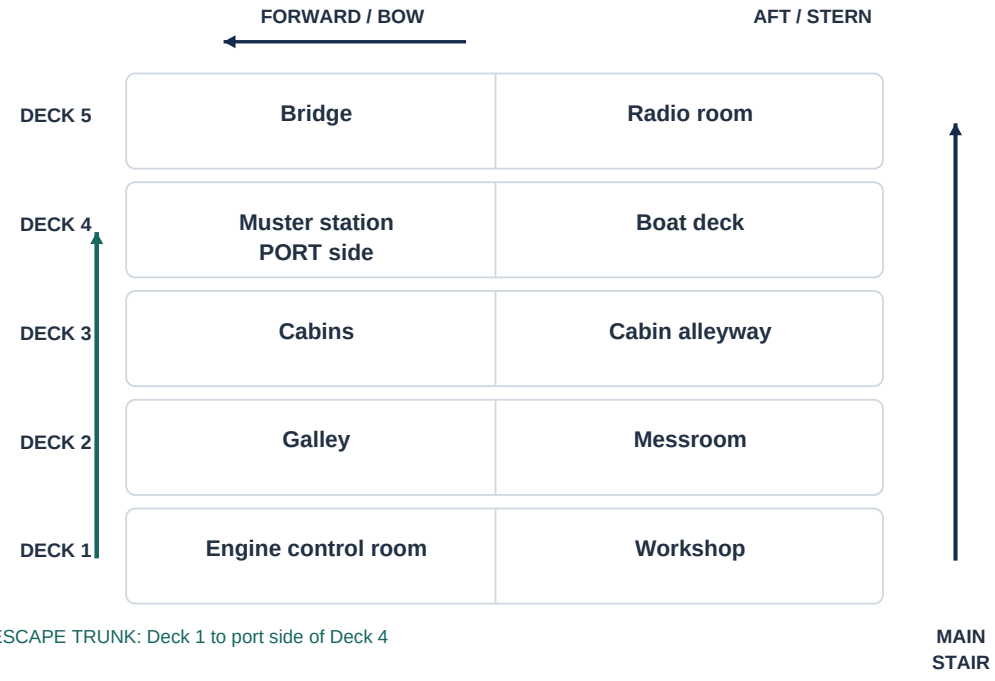

138. Use past simple: The supervisor _____ (stop) the work at 1417. [1 mark]

139. Report this statement using said and past perfect: The worker said, “I did not secure the bag.” [1 mark]

140. Correct the verb: Two ratings was standing nearby. [1 mark]

SECTION E | ITEMS 141-145 | 1 MARK EACH

Read the vessel plan

Simplified elevation for language tasks. Not to scale. Port/starboard are stated in labels, not inferred from this side view.

141. Which deck contains the bridge? [1 mark]

142. Which room is next to the bridge? [1 mark]

143. Where is the workshop in relation to the engine control room: forward or aft? [1 mark]

144. Which side of Deck 4 contains the muster station? [1 mark]

145. From the Deck 3 cabin alleyway, how many decks up is Deck 4? [1 mark]

SECTION E | ITEMS 146-150 | 1 MARK EACH

Read the equipment status board

MV CEDAR LEAF	Status at 1600 LT
Fresh-water pump P1	RUNNING - discharge pressure 2.7 bar
Fresh-water pump P4	OUT OF SERVICE - motor overload alarm at 1535
Inspection	Internal inspection not yet authorised
Cause of P4 fault	NOT CONFIRMED
Responsible officer	Second Engineer
Next update	1630 LT

146. Which pump is currently running? [1 mark]

147. Which pump remains out of service? [1 mark]

148. What is P1's recorded discharge pressure? [1 mark]

149. What is the next update time? [1 mark]

150. Is the cause of the P4 fault confirmed: yes or no? [1 mark]

SECTION F | 20 MARKS | TARGET: 100-130 WORDS

Task 151 - Factual near-miss report

Use every relevant fact below. Write a short report with a heading, chronology, observed outcome, attributed statement, analysis status and follow-up action. Keep approximate information approximate. Do not invent an established cause.

Vessel / report	MV Elm Coast / NM-26-044
Date / location	24 September 2026 / port aft deck
Approx. 1025 LT	A 1.5 kg hand tool fell approximately 4 m from a platform and landed about 2 m from a cadet.
1027 LT	Chief Officer stopped the work; bosun barriered the area.
Outcome	No injury or damage reported.
Worker statement	“I had not secured the tool bag.”
Review finding	Loose-tool check not recorded on the permit copy; wider investigation incomplete.
Follow-up	Chief Officer to review the permit checklist by 26 September, 1200 LT.
Sign-off	Write “Cadet Writer”, your department, and 24 September 2026, 1100 LT.

Use the writing space on the following page. Check: source facts, units, chronology, unknowns, named owner, next time and sign-off.

SECTION F | TARGET: 100-130 WORDS

Task 151 - Factual near-miss report - response

SECTION F | 20 MARKS | TARGET: 70-100 WORDS

Task 152 - Watch handover and outstanding work

Write a handover note from the information below. State the current status, relevant past events, pending action, responsible person and reporting time. Use at least one present continuous form and one present perfect form naturally.

Vessel / time	MV Beech Bay / 25 September 2026 / 0800 LT
Equipment in service	Fresh-water pump P1 running; discharge pressure 2.6 bar.
Defect	P2 stopped at 0710 after a motor overload alarm.
Action already completed	Fault recorded; Second Engineer informed.
Not completed	Authorisation checks incomplete; no opening or restart authorised.
Cause	Not confirmed; do not name a component as the cause.
Next action	Second Engineer to coordinate authorised checks; status update at 0900 LT.
Operational status	Water supply maintained by P1; report any change.
Sign-off	Cadet Writer / [department] / 0800 LT

Use the writing space on the following page. Check: source facts, units, chronology, unknowns, named owner, next time and sign-off.

SECTION F | TARGET: 70-100 WORDS

Task 152 - Watch handover and outstanding work - response

SECTION G | TWO TASKS | 10 MARKS EACH

Speaking task cards

Task 153 - Routine VHF exchange

Your role and information
You are on MV LARCH, call sign HSTQ4, in a CLOSED classroom simulator. Call Harbour Control. Your position is 3 nautical miles south of Entrance Buoy; draft 7.2 m; ETA 1400 LT. The examiner will assign a working channel, ask you to spell the vessel name, and read one figure back incorrectly. Correct that figure and confirm the final information. Do not invent port permission.

Prepare for two minutes; speak for up to four minutes. The examiner will ask questions. Ask for clarification when you need it.

Task 154 - Machinery status and follow-up

Your role and information
You are an engine cadet reporting to the Second Engineer. Fresh-water pump P5 stopped at 1420 LT with a motor overload alarm. A recorded pressure just before the trip was 2.5 bar. P1 is now running and the water supply is maintained. No internal inspection or reset has been carried out. Cause not confirmed. The next update is required at 1500 LT. Give a short report and answer the examiner's questions. Deck cadets practise the same shared operational reporting task.

Prepare for two minutes; speak for up to four minutes. The examiner will ask questions. Ask for clarification when you need it.

What the assessor listens for
Assessment focus: clear identification, complete and accurate information, appropriate interaction and repair, understandable delivery, and no invented operational facts.

End of assessment

Check that you have answered Items 1-150 and completed Tasks 151-152. Your assessor will record Tasks 153-154 separately.
